CONTA-CLIP

The Company

Founded and kept in the family since 1977: **CONTA-CLIP** is an owner-operated company that is a mid-sized global player. Users of electrical and electronic connection products have come to trust us for our reliable components. They also trust in our wide-reaching competence within the market and industry which has evolved over many years. In the years since our company was founded, we have evolved from a manufacturer to an innovator.

Our employees are connectivity specialists coming from a wide variety of backgrounds. They understand the specific problems, requirements and challenges of our customers. This ensures communication among equals. We then invest our gains directly into maintaining a modern and efficient production process. This allows us to maintain the most modern machinery at our facilities. We develop and produce the tooling ourselves. We neither make nor accept any compromise in the quality of materials used in our products.

Our top-class products are supported by this interplay between top-class men and machinery. We have also designed our range of services to align with customer needs. We develop electronics, assemble terminal rails, take care of component labelling, and deliver completely populated housings when needed – totally customized and expedited.

Our passion and concern for our customers' challenges does not end after we've delivered our solution. **CONTA-CLIP** customer representatives are always ready to offer their support to the customer, because service and support are our top priorities.

CONTA-CLIP

Overview

Products from our **CONTA-CONNECT** (connection systems), **CONTA-ELECTRONICS** (electronics) and **CONTA-CON** (PCB connectors) lines are developed and optimized in close cooperation with the user community. They contribute to the smooth operation of a vast diversity of applications.

Quality management at **CONTA-CLIP** is conducted in compliance with DIN ISO 9001 and the certification of our suppliers is a top priority for us. Our products also comply with the relevant international standards. We work with materials that contain no hazardous substances and support regenerative heat recovery. **CONTA-CLIP** strives for the ideal synergy between environmental sustainability, process optimization and innovative products.

CONTA-CLIP

Wire connection types

Screw connection system SRK|RK
The clamping yoke design

The clamping yoke transmits pressure from the screw to clamp the conductor against the busbar. The required contact force is generated by the torque applied to the screw.

This system provides a nearly gas-tight connection between the conductor and the internal busbar. The increased torque is generated by an elastic distortion of the terminal body. This creates increasing thread friction and results automatically in a stronger mechanical grip on the conductor.

Because of its construction, the clamping yoke is able to provide the strongest contact force and thus the lowest voltage drop. The clamping yoke and the connecting screw are make from carbonized steel that is galvanized and chrome-plated.

The advantages of using the pressure-spring connection mechanism:

- Maximum contact force and contact security
- Resistant to vibration
- Wire connection range from 0.08 to 240 mm²
- The lowest voltage drop
- Connection of multiple wires is possible

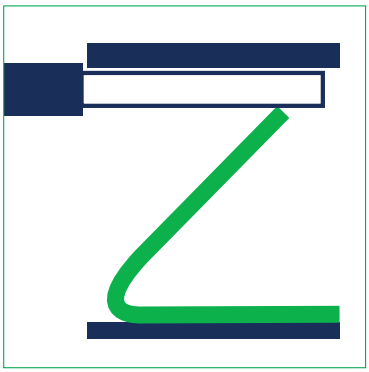
Screw connection system RK
Wire-protected design

The wire-protected design is an alternative to the clamping yoke; it is an applications-oriented, affordable and less technically demanding solution.

This simple connection mechanism is designed to be connected one time for an installation application. The wire protection feature prevents the wire from being cut off or pushed away by the screw.

The advantages of using the wire-protection connection mechanism:

- A cost-effective connection mechanism



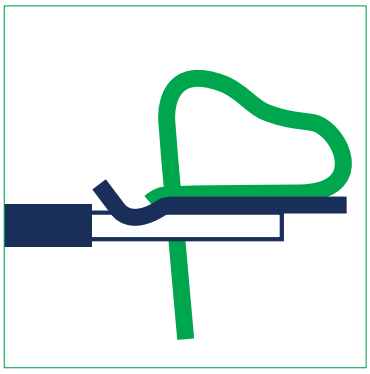
Pressure-spring connection system FRK
The pressure-spring design

The pressure spring design makes wiring convenient and ensures the maximum level of contact security! This connection mechanism unites the advantages of the **CONTA-CLIP** tension-clamp connection system with the possibility to connect individual wire using no tools!

Solid and stranded wires with wire-end ferrules can simply be inserted directly into the terminal point. The contact between the wire and the busbar is automatically established during this insertion. A standard screwdriver can be used to open the clamp for release or for the insertion of stranded wire without ferrules.

The advantages of using the pressure-spring connection mechanism:

- Wire can be contacted directly – no tool required
- Resistant to vibration
- Wire connection range from 0,08 to 4mm²
- Easy to work with
- Compact shape
- Reduces wiring time by up to 80%
- Saves much time and money



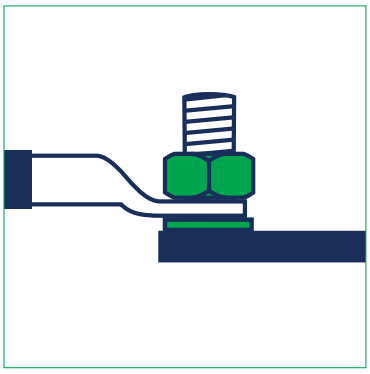
Tension-spring connection system ZRK
The tension-spring design

The tension-spring functions in a manner similar to the clamping yoke. The tension spring also separates the mechanical and electrical functions.

The tension spring consists of high-quality, rust-proof, acid-resistant steel. This spring presses the wire against the busbar. The tension spring is a connection element which can be used quickly and for many purposes, and which distinguishes itself by being maintenance-free and shock-proof. High resistance to vibration is guaranteed by the unique design of the tension spring.

The advantages of using the tension-spring connection mechanism:

- Resistant to vibration
- Wire connection range from 0.08 to 16 mm²
- Reduces wiring time by up to 50%
- Faster to connect compared to the tension-clamp connection mechanism.



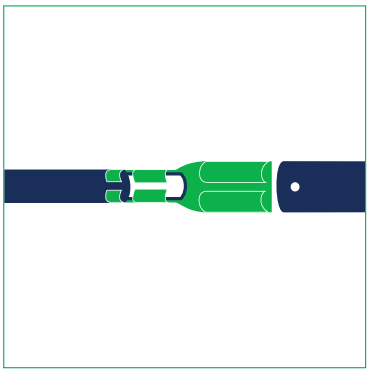
Stud connection system HSK
The stud design

Ring cable lugs are used in the stud connection to secure the wires onto studs. A secure electrical and mechanical connection to the busbar is established.

After attaching the cable lug on the wire, the lug is placed on the stud and fastened down using the counter nut. A spring lock washer is included to ensure that the lug does not loosen. The wire connection range is from 0,2 mm² to 120 mm².

The advantages of using the stud connection mechanism:

- Can connect power up to 1000 V and up to 269 A
- Resistant to vibration
- Can connect multiple wires (up to four)
- Wire cross-sections from 0.2 to 120 mm²
- Excellent contact force
- Low voltage drop



Spade connection system FF|SF
The spade design

In the spade connection mechanism, the wire is plugged onto the terminal block's busbar using a crimped-on spade cable lug so that no tool is needed.

The system's rated current depends on the rated current of the cable lug and the corresponding terminal block. This connection design is used in routing distribution on the control-signal level, control-voltage level and for potential/signal multiplication.

The advantages of using the spade connection mechanism:

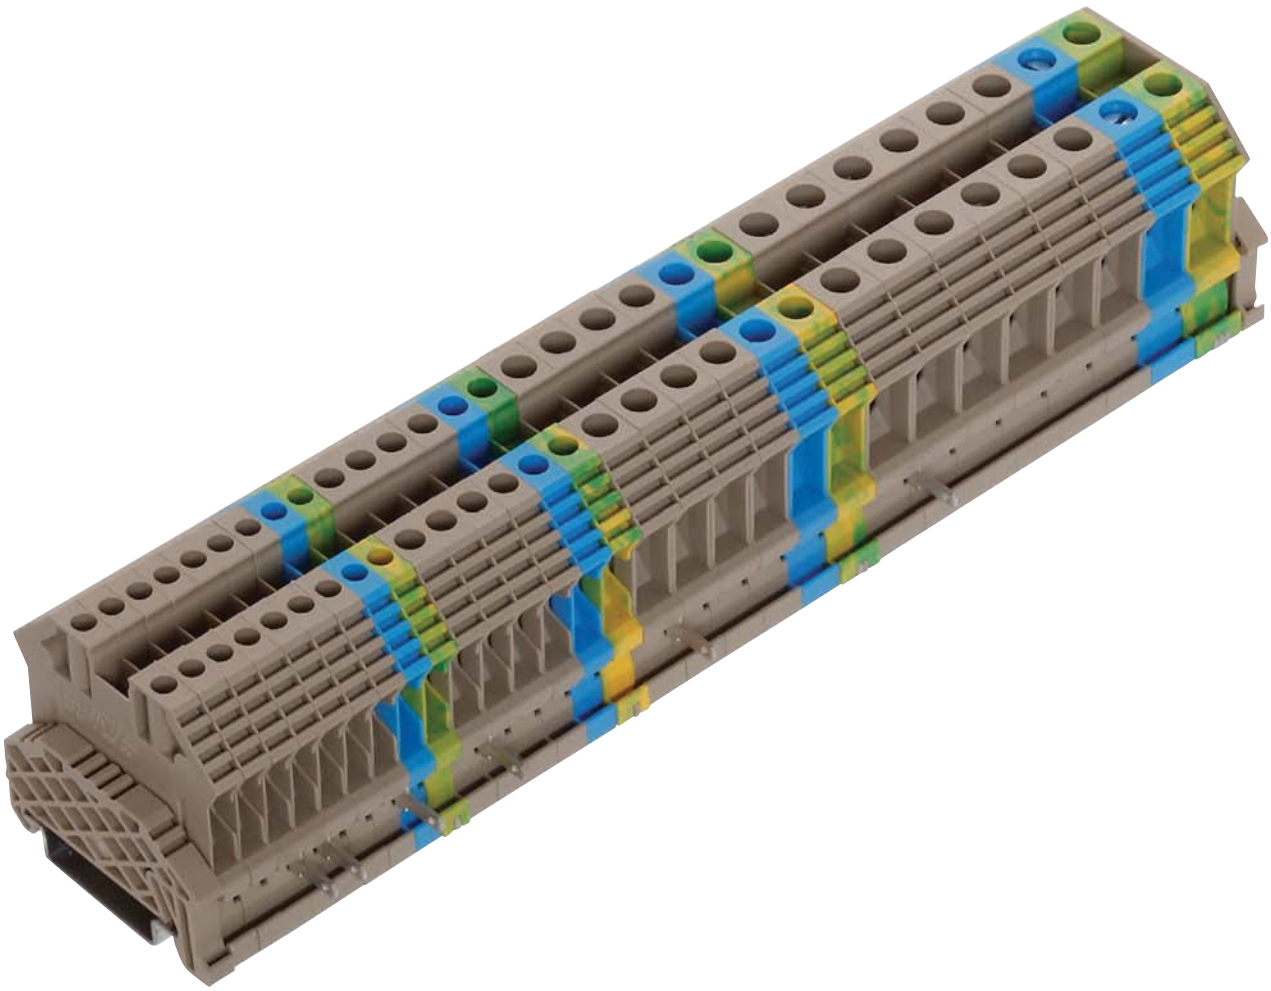
- Contact with wire established without any tool (using the crimped-on cable lug)
- Wire connection range from 0.2 to 6 mm²
- Easy to work with
- Can be rewired quickly

Screw connection system SRK | SSL

Proven – Safe – Reliable

CONTA-CLIP offers an innovative line of feed-through and protective-earth terminals featuring the proven screw-connection system for the smallest cross-sections ranging from 0.08 mm^2 to 10 mm^2. The screw-connection mechanism is easy to operate and can be used to establish a quick, safe connection using solid and finely stranded wires with or without wire-end ferrules. The protective-earth terminals feature a PE foot contact that is snapped on without screws, ensuring mechanical and electrical safety.
Our well-designed line of accessories allows you to significantly reduce your installation and storage costs. Potential voltages is muddled, the **SQI** pluggable cross connection system is used to connect together terminals along the rail. All of the insulating materials used in this product line are free of pollutants. They also comply with flammability class V0 (self-extinguishing) according to UL 94.

The basic feed-through and protective-earth terminals are certified as standard Atex and can thus be used in explosive-risk EEx e. zones.*1



*1 Starting 2011

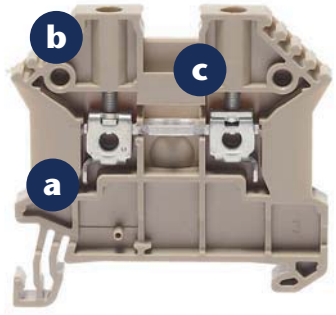
Screw connection system SRK | SSL

Features

a The connection | Secure contact

The clamping yoke transmits pressure from the screw to clamp the conductor against the busbar. The required contact force is generated by the torque applied to the screw.

- Rising clamp design
- High contact force and contact security | Minimal contact resistance
- Clear separation of electrical and mechanical functions
- Clamping yoke made from hardened steel: galvanized, chrome-plated and additionally thick-film passivated
- The busbars are made from copper with surface coating (tin)
- Resistant to vibration and maintenance-free
- Corrosion-free
- Low voltage drop
- Compact shape
- Foot base can be snapped on TS 35 DIN rail



c Pluggable cross-connection options

Distributing potentials with the pluggable **SQI** cross-connection system is quick and easy.
Two cross-connection channels allow two voltages to be fed across when working with the standard terminals with rated cross-sections of 2.5 mm^2, 4 mm^2, 6 mm^2 and 10 mm^2.

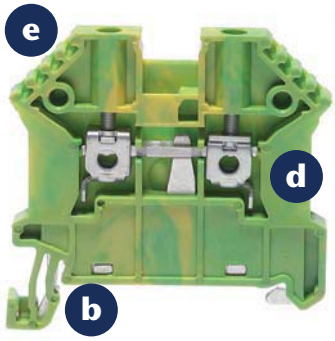
- Available in 2 to 10 and 30 poles
- Simple to insert and thus quicker to install
- No insulation plate or partition plate is required between a neighbouring cross-connection, since the **SQI** has a touch-safe protective design
- Cross-connection can carry the full rated current and voltage of the corresponding terminal block
- Individual terminals can be skipped over by breaking out contact pins in the cross-connector

Feature
The **SRK 2.5** to **SRK 10** feed-through terminals have a rail adapter built in to the lower part of the terminal housing. This allows the cable shield from a control or data line to be connected in addition to the individual wires.

b Easy and safe to wire with an established connection system

The screw-connection mechanism is easy to operate and can be used to establish a quick, safe connection using solid and finely stranded wires with or without wire-end ferrules.

- Simple and self-explanatory usage
- Can be used around the world
- A connection mechanism that has proven itself in millions of applications
- Generous wire-entry geometry
- Connection of multiple wires is possible
- PE foot contact on both sides – can be snapped on (no screws) to TS 35x7.5 and TS 35x15 rails.



d Housing insulation material

- Polyamide PA6.6 UL 94, flamm. class V0, self-extinguishing without burning drops
- Free of hazardous materials such as halogen or phosphor
- Creepage resistance: CTI 600
- Operating temperature from -40°C to +120°C

e Marking options

The standard terminals feature four labelling channels. They can be fitted with four **PMC SB** labelling tags or two **PMC BSTR** tags.

Screw connection system SRK | SSL

An overview of the advantages

Compact with identical shapes

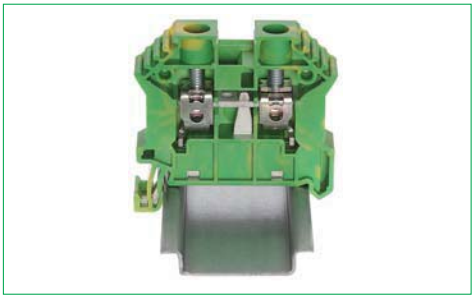
The external size and shape are identical for the **SRK** feed-through terminal and the **SSL** PE terminal in the cross-sections 2.5 mm², 4 mm², 6 mm² and 10 mm². Identical end plates and partition plates can thus be used. The width (pitch) of the terminal blocks is 2.5 mm² (5 mm), 4 mm² (6 mm), 6 mm² (8 mm) and 10 mm² (10 mm). Despite their small size, the **SRK** feed-through terminals and the **SSL** PE terminals have a rated voltage range of up to 1000 V.

Large wire-entry bay and connection space

The wire-entry bay is very spacious – this permits quick wiring of solid or finely stranded wires, with or without wire-end ferrules. The rated cross-sections specified in our documentation correspond to a connection with stranded wires using wire-end ferrules. It is also possible to use solid wires up to the next larger cross-section size.

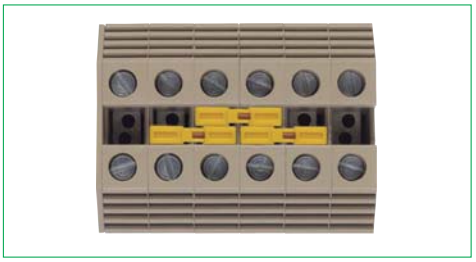
Security and stability

The insulated terminal housing with its special foot shape guarantees a convenient snap-on to the rail and a secure mount (on TS 35x7.5 and TS 35x15 according to EN 60715). Metal parts – including screws, clamping yoke, busbars, and PE foot – are securely mounted within the terminal housing. In addition, the screws are held captive from above by a screw brake mechanism. The PE terminals (**SSL 2.5** to **SSL 10**) make an electrical and mechanical connection to both sides of the rail. It can be snapped on to the rail with no need for screws and offers a maximum of mechanical and electrical security.



Cross-connection system

The standard feed-though terminals in 2.5 mm², 4 mm², 6 mm² and 10 mm² feature two cross-connection channels. So the two-pole **SQI.../2** cross-connectors can be used to connect any number of terminals with each other.



Distributing potentials

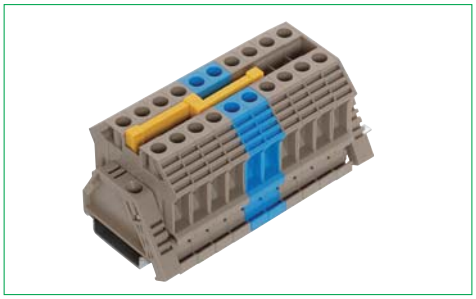
The **SQI** cross-connectors are available from 2 to 10 poles and with 30 poles. Two cross-connection channels allow two voltages to be fed across when working with the standard terminals with rated cross-sections of 2.5 mm², 4 mm², 6 mm² and 10 mm².
It is possible to shorten the **SQI** cross-connection with a cutting tool. The **SQI** system allows you to maintain touch-protection safety by covering the cut (uninsulated) end with a **SQIK** insulation cap.

Screw connection system SRK | SSL

An overview of the advantages

Skip-over bridging

It is possible to skip over terminal blocks by breaking out individual contact poles. You can mark these contact elements using the plastic insulation of the cross-connector.



Power feed with small cross-sections

Screw terminals with larger cross-sections and standard cross-connectors can connect to a single terminal of the next size up for the power feed-in. The **SQI** cross-connection system can carry the rated voltage and rated current.

Easy to service

The 30-pole **SQI** cross-connector features a numbered scale which allows the user to easily count off the number of required poles.

Labelling

High-quality, quick and concise labelling is possible when using the **PMC SB, PMC BSTR** or **MC** labelling systems. The standard terminals feature up to four labelling channels.

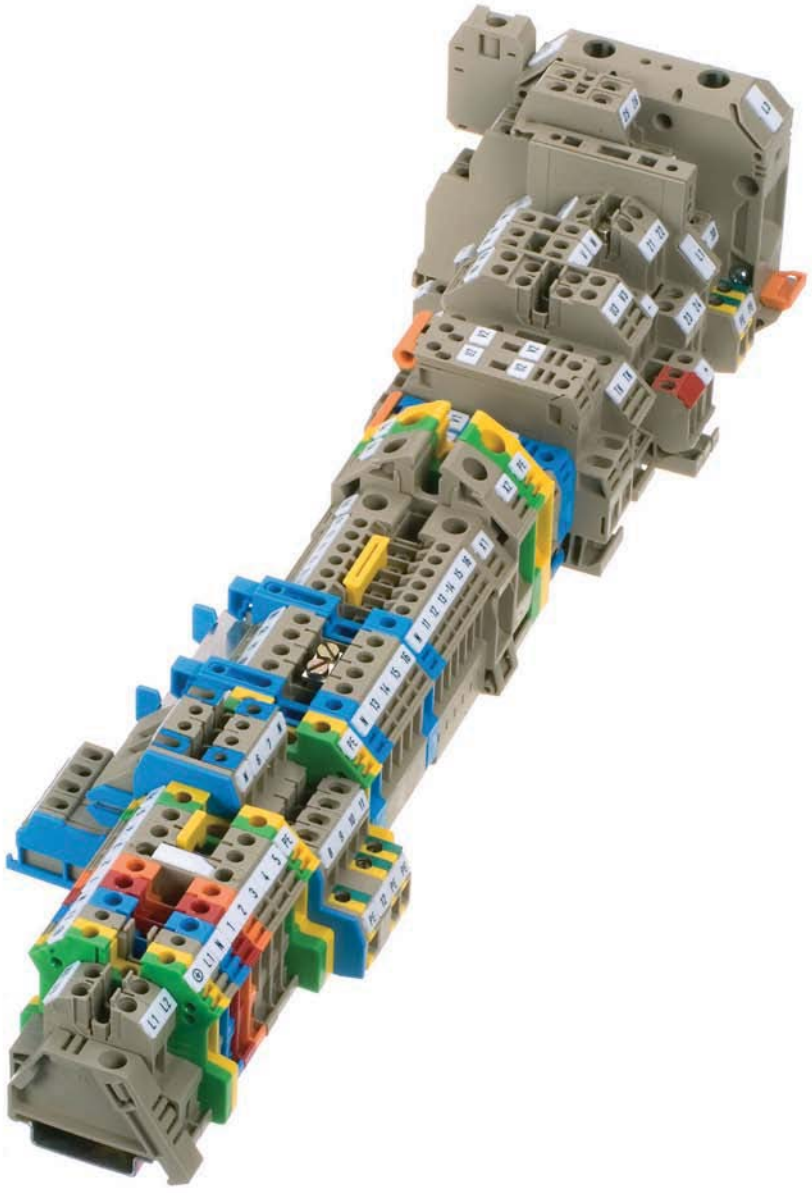
Screw connection system RK | SL *Proven – Safe – Reliable*

CONTA-CLIP offers an innovative line of feed-through and protective-earth terminals featuring the proven screw-connection system for the smallest cross-sections ranging from 0.08 mm^2 to 240 mm^2. This also includes disconnect terminals, fused terminals, actuator terminals, sensor terminals, motor-connection terminals and direct-mounting terminals. This system can be used for a large variety of applications with only a minimal number of accessory parts. The screw-connection mechanism is easy to operate and can be used to establish a quick, safe connection using solid and finely stranded wires with or without wire-end ferrules. The protective-earth terminals feature a PE foot contact that is snapped on, ensuring mechanical and electrical safety. Our well-designed line of accessories allows you to significantly reduce your installation and storage costs. You can take advantage of this system to implement all of your switching requirements with a minimal amount of accessories. Our clamping-yoke system has already proven itself in millions of applications. It ensures an electro-mechanical connection that is both permanent and high-quality.



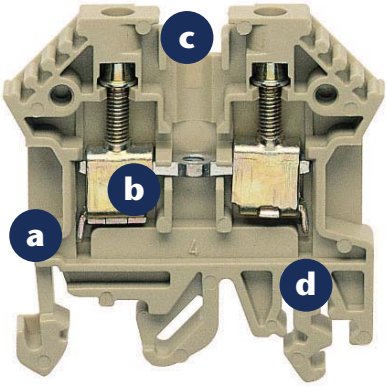
Screw connection system RK | SL

Features

a The connection | Secure contact

The clamping yoke transmits pressure from the screw to clamp the conductor against the busbar. The required contact force is generated by the torque applied to the screw.

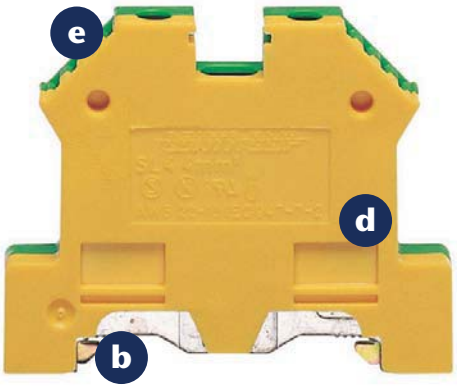
- Rising clamp design
- High contact force and contact security | Minimal contact resistance
- Clear separation of electrical and mechanical functions
- Clamping yoke made from hardened steel: galvanized, chrome-plated and additionally thick-film passivated
- Busbars made from copper or high-quality brass with surface coating (tin)
- Resistant to vibration and maintenance-free
- Corrosion-free
- Low voltage drop
- Compact shape
- The product line includes terminal blocks that can be snapped on to TS 15, TS 32/35 and TS 35 rails.



b Easy and safe to wire with an established connection system

The screw-connection mechanism is easy to operate and can be used to establish a quick, safe connection using solid and finely stranded wires with or without wire-end ferrules.

- Simple and self-explanatory usage
- Can be used around the world
- A connection mechanism that has proven itself in millions of applications
- Generous wire-entry geometry
- Connection of multiple wires is possible
- The centrally screwed PE foot grips both sides of the rail to ensure both mechanical strength and electrical safety.



c Possibilities for cross-connections

The pre-assembled **Q/QI** cross-connection units, available with 2, 3, 4 or 10 poles, significantly reduce installation times. There are additional advantages with the **QI** insulated cross-connections when using terminal blocks up to 10 mm^2.
Because of its angled design, two **QI**s can be assembled offset (staggered). Thus it is possible to achieve the parallel guiding of two potentials.

Since the **QI** is insulated and touch-safe according to VDE 0106 section 100, it is not necessary to use end plates or partitions between neighbouring cross-connection up to 400V. The **QI** cross-connections can carry the rated current of the terminal blocks. Terminals can be skipped over by breaking out individual contact poles.

d Housing insulation material

- Polyamide PA6.6 UL 94, flamm. class V2 self-extinguishing
- Free of hazardous materials such as halogen or phosphor
- Creepage resistance: CTI 600
- Operating temperature from -40°C to +105°C

e Marking options

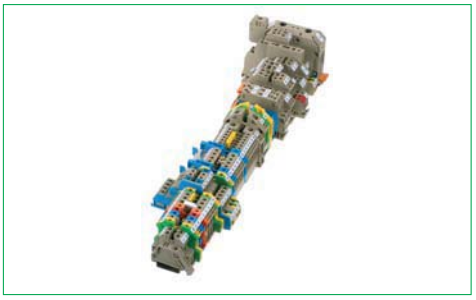
The standard terminals feature four labelling channels. They can be fitted with four **PMC SB** labelling tags or two **PMC BSTR** tags.

Screw connection system RK | SL

An overview of the advantages

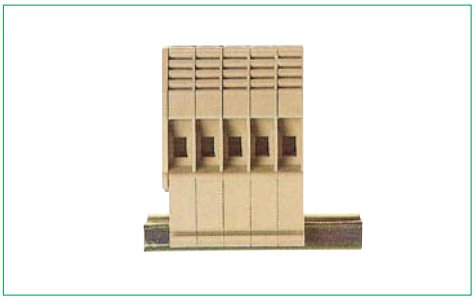
A connection system proven in millions of applications

The screw connection is still the foundation for industrial-strength connectivity. It can exert very high contact forces in a small space while still ensuring a high level of contact safety.



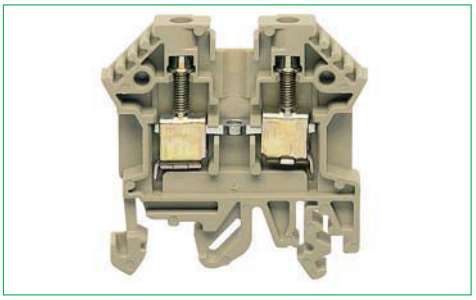
Large wire-entry bay and connection space

The funnelled entry into the insulation housing guides the wire smoothly into the clamping yoke. This makes it easy to feed in stranded and finely stranded wires (even without wire-end ferrules) in a safe and smooth manner. The rated cross-sections specified in our documentation correspond to a connection with stranded wires using wire-end ferrules. It is also possible to use solid wires up to the next larger cross-section size.



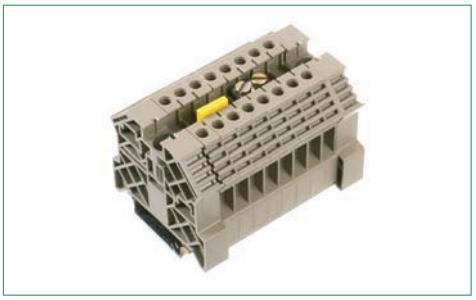
Stability and efficiency

CONTA-CLIP terminal block with the **RK** screw-connection system are normally equipped with a combi-foot. This ensures that the terminal blocks can easily be snapped on to the **TS 35 x 7.5, TS 35 x 15** rails (according to DIN EN 50 022) and the **TS 32** (according to DIN EN 50 035). When using a C-rail (**TS 32**) and the device/top-hat rail (**TS 35**), you can significantly reduce the number of required terminal block types in your inventory. Economically, this provides you with a cost-effective solution.



Cross-connection system

You can save time when distributing potentials between terminal blocks of identical cross-section ranges when using the **Q/QI** screwable cross-connection system. The **QI** has a touch-safe design and, like the **Q** cross-connection system, is available with 2, 3, 4 or 10 poles.



The QI cross-connector variability

Thanks to the angled design of the insulated **QI** cross-connector, it is possible to guide different potentials in parallel and without loss of poles when using the **QI** system with cross-sections ranging from 2.5 mm^2 to 10 mm^2.

Screw connection system RK | SL

An overview of the advantages

Skip-over bridging

With the standard terminal blocks, it is possible to skip over terminal blocks by breaking out individual contact poles. A cutting tool can be used to shorten the cross-connections. In this case, make sure that the cut side is fitted with an end plate so that the voltage rating is maintained.

External cross-connector AQI

The **AQI** can be used to make a cross-connection for terminal blocks with no cross-connection channel and for applications requiring an additional potential to be cross-connected.

Labelling

High-quality, quick and concise labelling is possible when using the **PMC SB, PMC BSTR** or **MC** labelling systems. The standard terminals feature up to four labelling channels.

A comprehensive line of accessories
is available starting at page 264.

- DIN rails
- Mechanical attachment | end stop
- Group marker holders
- End plates | Visual separation
- Cross-connections (Potential distribution)
- Covers
- Test adapters

5) with housing pegs

Feed-through terminals RK | Measurement pick-off terminals MAG

The **RK 50**, **RK 95**, **RK 150** and **RK 240** terminal blocks are made of a double-layer insulation housing. The specialized construction of the clamping yoke minimizes the contact resistance between the wire and the busbar. The clamp is tightened using a hex-socket screw which creates the required torque together with the clamping yoke. Pegs are located on the plastic housings of the terminal blocks; these lock to adjacent terminals to increase the mechanical stability. A threaded **M 2.5** bolt can be attached to the injection-moulded pegs in order to further increase the mechanical stability. A diverse line of accessories offers a practical supplement to these products.

Feed-through terminals RK | Measurement pick-off terminals MAG

The features in detail

Measurement pick-off terminal MAG

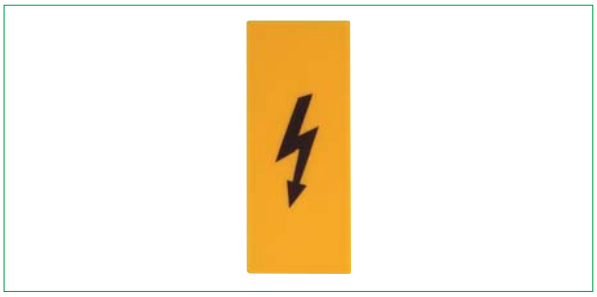
The **MAG** measurement pick-off terminals allow you to tap into the voltage on the **RK 50**, **RK 95**, **RK 150** and **RK 240** terminal blocks when using wires with small cross-sections ranging from 0.2 to 10 mm². A special socket slot in the **RK 50** to **RK 240** terminal blocks enables the **MAG** supplemental connections to be added retroactively. They can be independently snapped on to the base housing of the terminal blocks. **MAG** terminals are individually snapped into the housing of the main terminal above the wire entry. The electrical contact is then established using the connection screw on the main-wire terminal of the busbar. This technical solution is safe, clever, and simplifies the wiring significantly. The rated voltage is 1000 V because of the total insulation provided by the pick-off terminal. The **PMC** quick marking system can be used for labelling the terminals.

Inlay plate EP

When connecting to rectangular conductors, you are required to attach an inlay plate in the clamping yoke. The **EP** inlay plates correct the V-shaped form of the clamping yoke to increase the contact area to a maximum on both sides of the conductor.

Individual covers AD

VDE regulations require that the mains terminals be covered. The yellow **AD** covers are marked with a lightning bolt symbol and are snapped on from above. They cover the screw heads on the terminal block so that the clamping point can not be reached while under live voltage.



External insulated cross-connection AQI

The **RK 50-**, **RK 95-**, **RK 150**- and **RK 240** can be connected electrically to each other within the same rated cross-section range by using 2-pole or 3-pole external cross-connectors. The external cross-connectors are designed to match the rated current of the corresponding terminal block.

Double-level terminal blocks RKD

Double-level terminal blocks RKD 2.5

The **ZIKD 2.5** terminal blocks have a width of 5 mm and are available in a variety of designs. They have three levels with six connection points and can handle solid or stranded wires up to 2.5 mm² with a rated current up to 24 amps. The upper and lower levels are connected electrically in the SV variants.

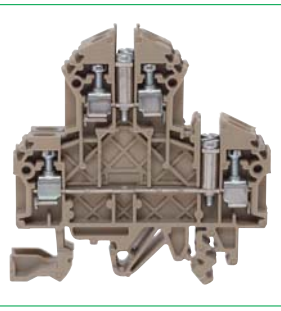
The **RKD** terminal blocks can be cross-connected at both levels using the **Q** cross-connection system.

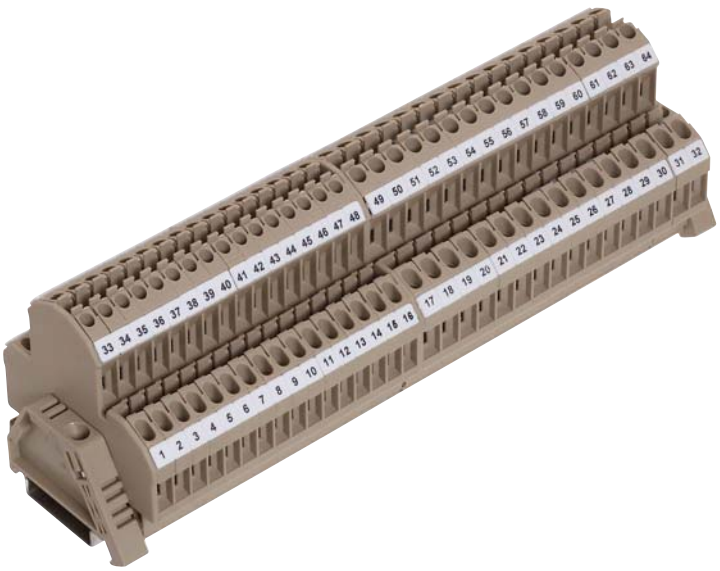
Double-level terminal blocks RKD 4

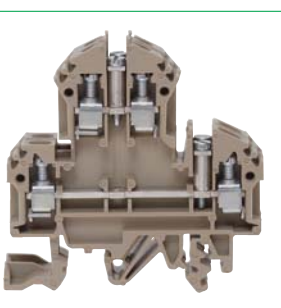
The **RKD 4** terminal blocks have a width of 6 mm and are available in a variety of designs. They have two levels with four connection points and can handle solid or stranded wires up to 4 mm² with a rated current up to 32 amps. The upper and lower levels are connected electrically in the SV variants.

The **RKD 4/D** variants are designed for a variety of switching tasks with electronics components such as diodes, resistors and varistors.

The **RKD** terminal blocks can be cross-connected at both levels using the **Q** cross-connection system.







Double-level terminal blocks RKDG

Double-level terminal blocks RKDG 4

The **RKDG 4** terminal blocks have a width of 6 mm. They have two levels with four connection points and can handle solid or stranded wires up to 4 mm² with a rated current up to 32 amps. The special feature of these terminal blocks is that their tightening screw is accessible even when wired.

The upper and lower levels are connected electrically in the **SV** variants.

The **RKDG** terminal blocks can be cross-connected at both levels using the **Q** cross-connection system or the **AQI** external cross-connection system.

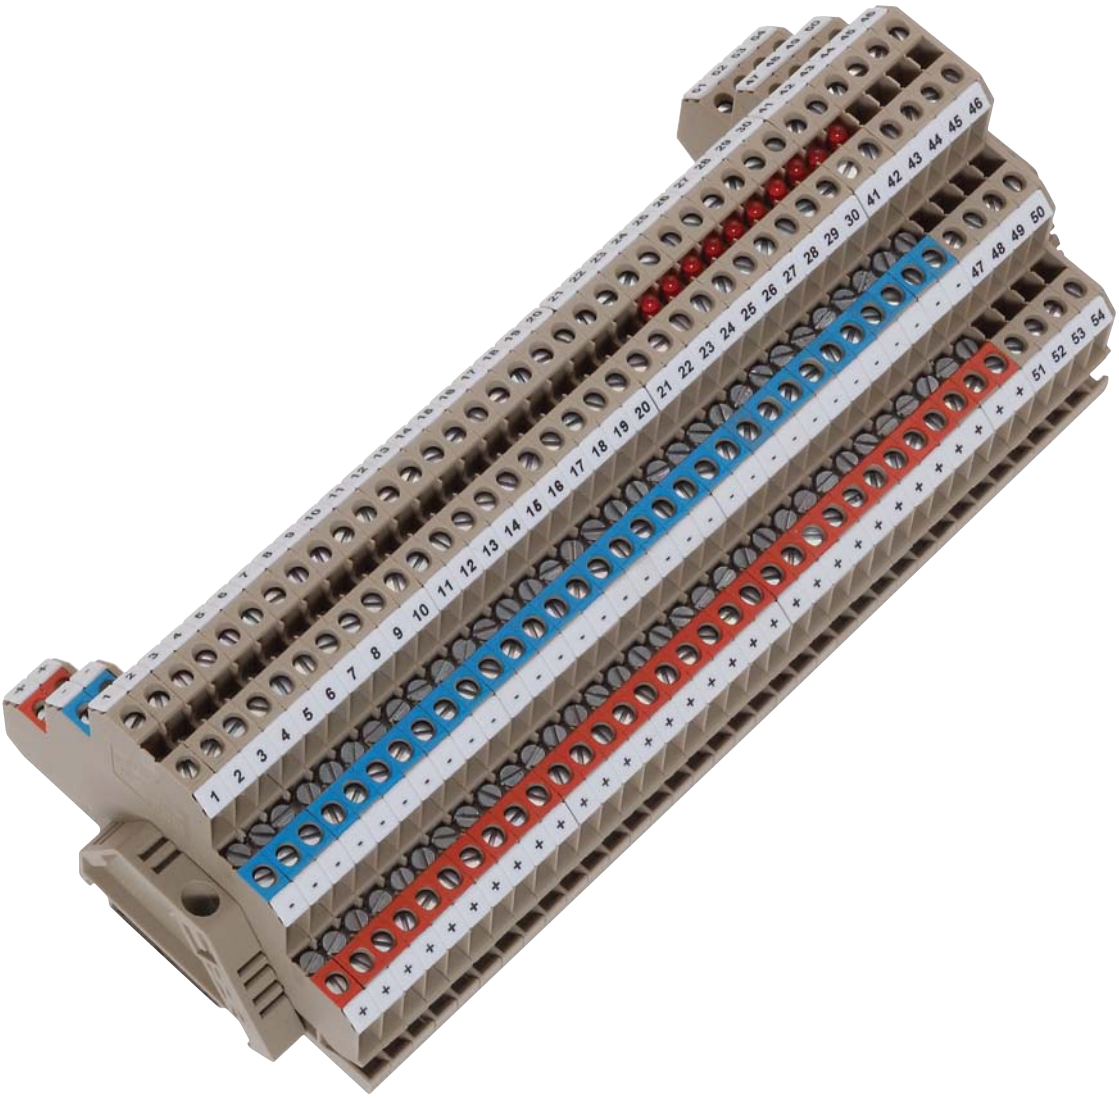
Three-level initiator terminals IKD/IK

In the field of machinery construction, inductive/capacitive proximity switches and diffuse-reflection sensors are being increasingly used for contactless switching purposes. These sensors are mostly designed for three-wire systems: plus and minus wires for the power supply and a third wire for switching signals. In order to ensure the proper overview of wiring and also to help you save time and space during your work, **CONTA-CLIP** offers a 5-mm thin initiator terminal with a screw connection – the **IK 2.5**. This product combines all of the connections found in an initiator or an actuator into a single terminal. When combined with the **IKD 2.5** power supply terminal, it is possible to connect the terminal strip of the **IK 2.5** initiator terminals to the power supply without any loss of poles.



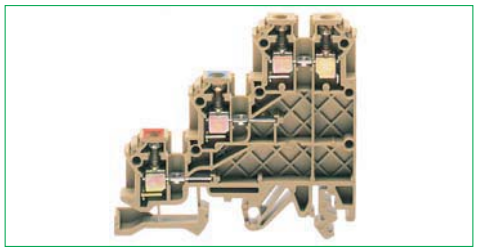
Three-level initiator terminals IKD/IK

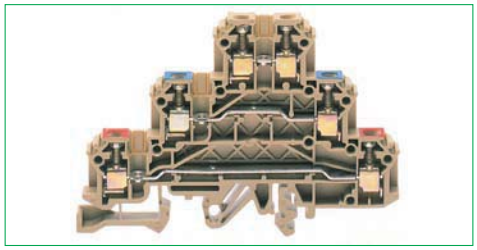
The features in detail

The **IKD 2.5** can be positioned anywhere in the terminal strip combination. If it is positioned at the start or in the middle of a terminal strip, the remaining exposed part of the **IKD 2.5** should be fitted with the short **AP/IKD** (catalogue no. 2714.2). The cross-distribution of the power supply takes place at the lower and middle levels using the **QS**, **VH** and **BS** accessory products or the pre-assembled **Q** cross-connector. The pre-assembled **Q** cross-connections are available with 2 to 10 poles or 100 poles.

The **IK 2.5** and **IKD 2.5** base terminals are also available with LED status displays. The display speeds up troubleshooting and signals the switching status.

This product line covers all standard control voltages, divided into the switching types “positive switching” or “negative switching”.





Features of the IK 2.5

- Thin design (5 mm)
- Closed wire entry
- One terminal per initiator for quick and precise signal assignment
- Touch-safe protection (VBG4) without an additional cover
- Colour-coding of plus (red) and minus (blue) connections
- Additional colour-coded labelling is possible

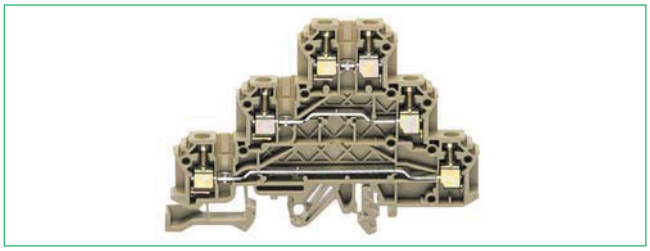
Features of the IKD 2.5

- Thin design (5 mm)
- Closed wire entry
- Switch signal and power supply can be connected
- Touch-safe protection (VBG4) without an additional cover

The IKD base terminals come in four variants:

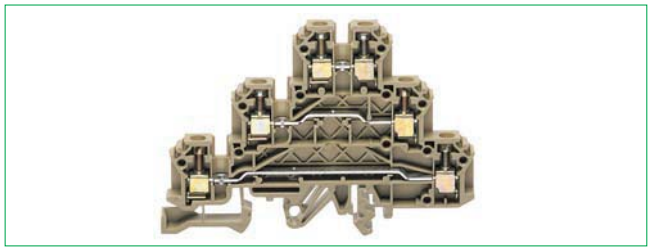
IKD 2.5

Raised-up rear wall, so cross-connection only possible on open side of terminal. Different supply voltages can be fed within one terminal combination.



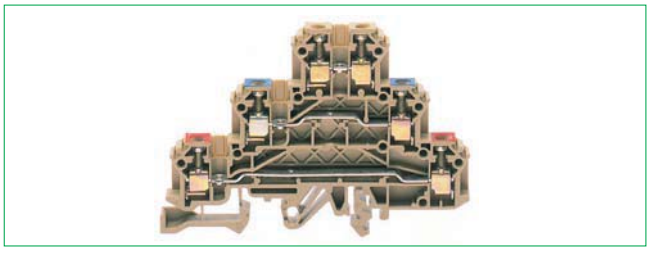
IKD 2.5/Q

Cross-connection is possible on open and closed sides of the terminal.



IKD 2.5/F

Raised-up rear wall, so cross-connection only possible on open side of terminal. Different supply voltages can be fed within one terminal combination. The lower level is labelled red and the middle level is labelled blue.



IKD 2.5/F/Q

Cross-connection is possible on open and closed sides of the terminal. The lower level is labelled red and the middle level is labelled blue.

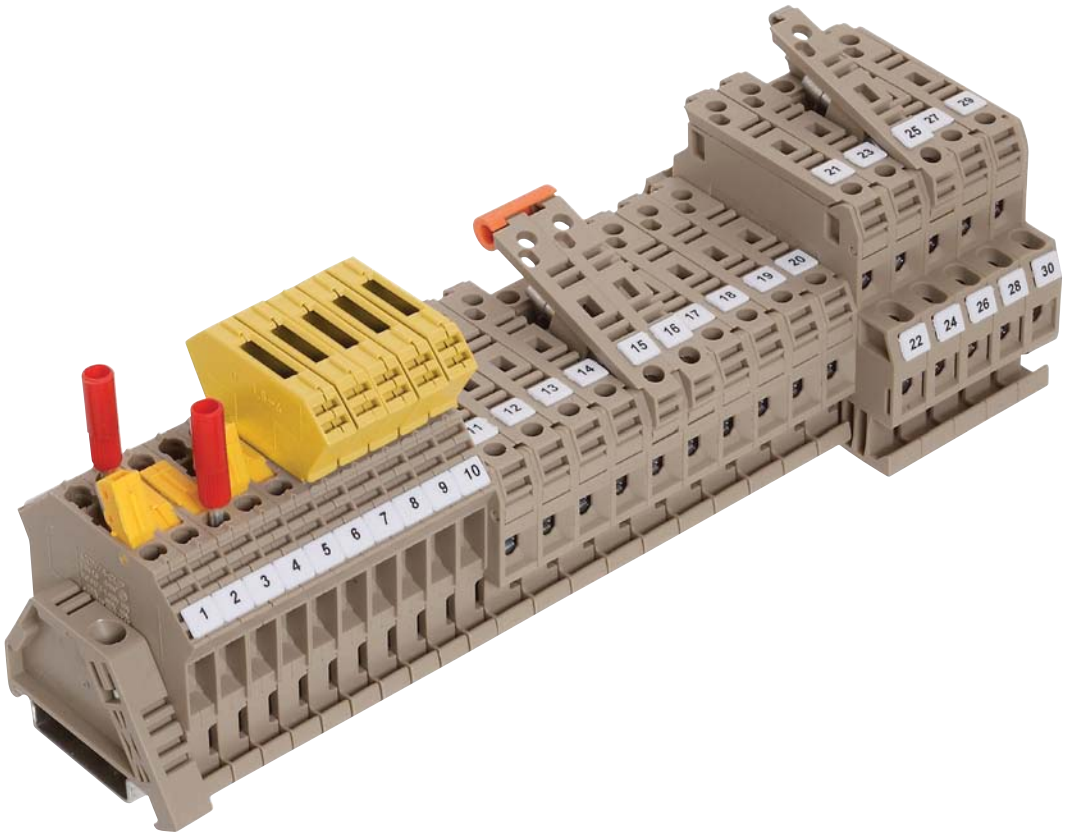
Disconnect terminals TRK/STK 2/TK

Disconnect terminals are commonly used within measurement and control systems. They provide assistance when troubleshooting in electrical facilities, when commissioning new facilities and when revising old facilities. These series come with a combi-foot for installation on a **TS 32/TS 35** rails or with a snap-on foot for the **TS 15** DIN rail.



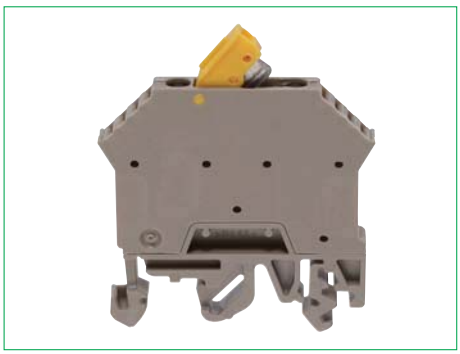
Disconnect terminals TRK/STK 2/TK

Different versions | Features

The **TRK 1.5** (disconnect-blade terminal) and the **TRK 1.5/DS** (disconnect plug) variants are both available.

Features of the TRK 1.5/TRK 1.5 DS

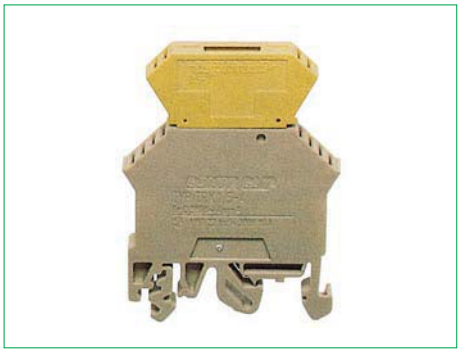
- Same construction as the standard terminal blocks
- A sturdy, closed insulation housing
- The established disconnect-blade with high-quality surfaces
- Minimal and stable level of contact resistance
- Touch-safe protection also during the disconnect process



The **TRK 1.5/STB** and **TRK 1.5/ 15/STB** versions offer the advantage of pre-assembled socket plugs instead of terminal screws. Without any additional accessories, these disconnect terminals feature a test pick-off to be used for speedier troubleshooting or as a measurement pick-off for comparing standardized signals.

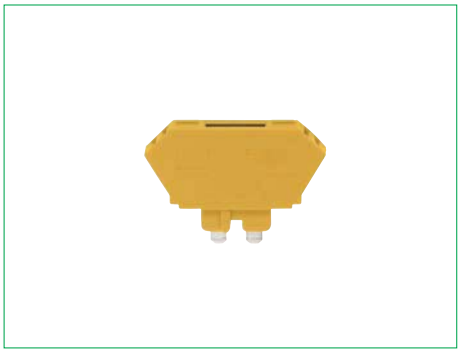
Features of the TRK 1.5/STB and TRK 1.5/15/STB

- Same construction as the standard terminal blocks
- A sturdy, closed insulation housing
- The established disconnect-blade with high-quality surfaces
- Minimal and stable level of contact resistance
- Touch-safe protection also during the disconnect process
- Test pick-off



Disconnect plugs and diode plugs for the **TRK 1.5/DS** disconnect terminals are available separately in four versions.

Disconnect plug without circuitry
DS 1-TRK 1.5 (**Cat. no.. 1403.2**)
Disconnect-plug with wire jumper
DS 1-TRK 1.5 (**Cat. no.. 1400.2**)
Disconnect plug with diode in blocking direction
DS 1-TRK 1.5 (**Cat. no.. 1401.2**)
Disconnect plug with diode in pass-though direction
DS 1-TRK 1.5 (**Cat. no.. 1402.2**)



The **TK 2** and **STK 2.../K** series feature a hinged lever for disconnecting. The lever comes with a contact sleeve.

Features of the TK 2/STK 2.../K

- Same construction as the standard terminal blocks
- hinged lever latches into fully open position.
- Disconnect terminals can be used as fuse-disconnect terminals by removing the contact ferrules.

Test-disconnect terminals PTK

Test-disconnect terminals are mostly used in the sectors of electricity generation and supply. They are tailored to the variety of switching demands for current-converter secondary circuits that predominate in these sectors. Current transformers must always have a secondary circuit when electricity meters and measuring instruments are being replaced, or when making comparative measurements.

CONTA-CLIP test-disconnect terminals are available in the following three basic versions, each with or without a pre-assembled socket plug.

All versions provide touch-safe protection according to **VBG 4**. A captive sliding partition is used to separate the current and voltage paths. The switch position is always easy to detect since the disconnect screw has a yellow insulating sleeve.

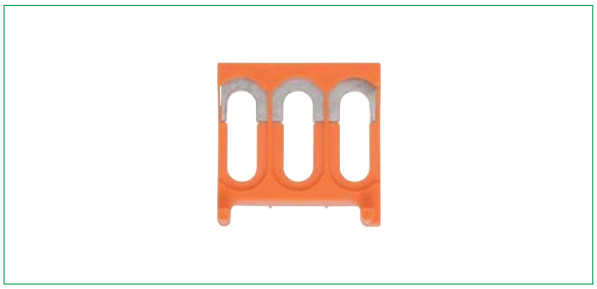
The **STB 14/4** sockets plugs for a test pick-off can be attached to all versions using the **PS 4** test plug.

Test-disconnect terminals PTK

The features in detail

Cross-switches QVS

The **VH 19** connecting sleeves and the **BS 25** screws or the **STB 35** socket plugs are required for fastening the **QVS** cross-switch bridge. The screws and socket plugs are available with or without coloured labelling.



Cross-switches QSB

The **QSB**s are positioned inside of the terminal block combination. They establish contact over the sliding partition.

Socket plugs STB 35

The **STB 35** socket plugs are used in the test-disconnect terminals for holding the **PS 4** test plug or the **KSS 2-8** short-circuit plug. The **STB 35** socket plugs can also be used when you need to test at the same time that a **QVS** is attached.

Socket plugs STB 14/4

The **STB 14/4** socket plugs can be screwed into the cross-connection channel. The are used to hold the **PS 4** test plugs or the **KSS 2-8** short-circuit plugs.

Test plug PS 4

The **PS 4** test plugs are used for the final testing of already-wired test circuits.

Short-circuit plug KSS 2-8

A cross-connection between two PTK terminals can be established with the **KSS 2-8** short-circuit plug.

1) with socket plug

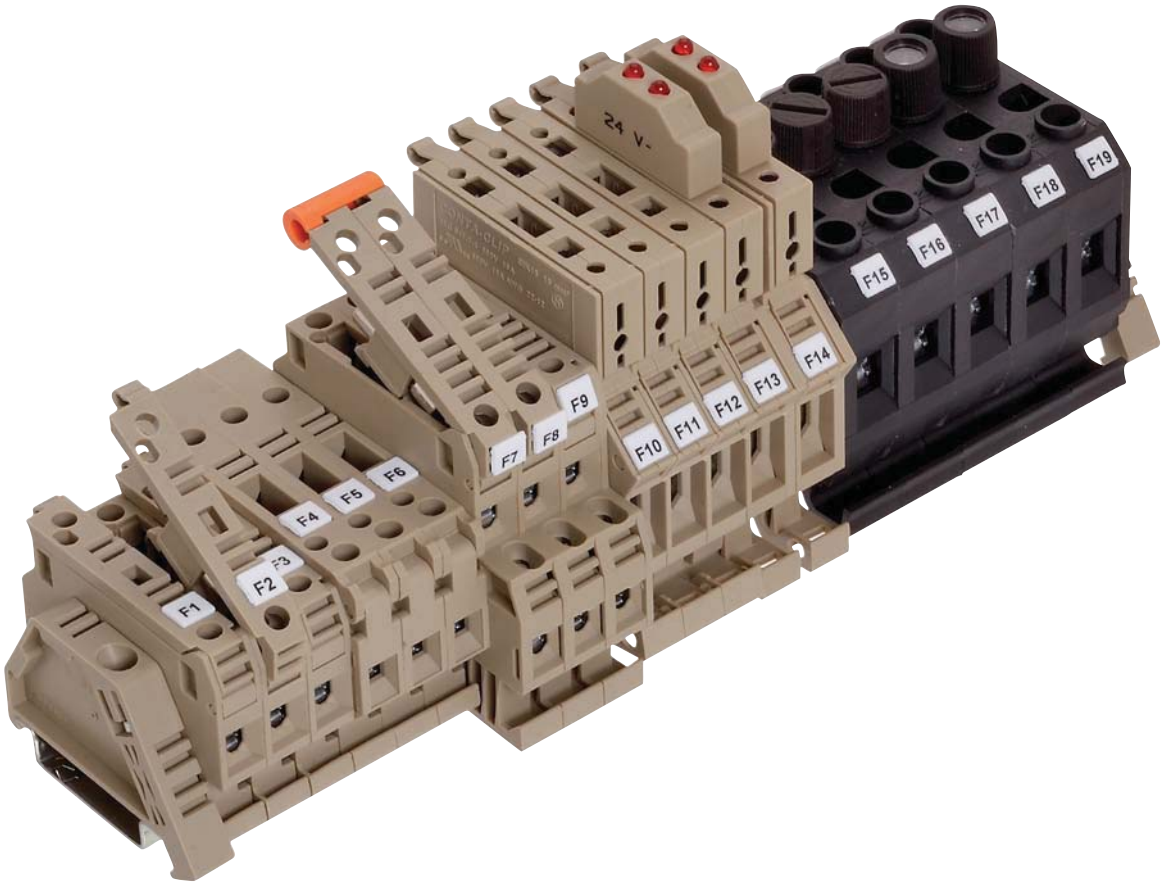
Fuse-disconnect terminals STK/SIK | Fused terminals SK

According to the the applicable VDE regulations, you must protect electrical facilities, machinery and devices with cable or device fusing. **CONTA-CLIP** offers a variety of product lines to help you meet these requirements.



Fuse-disconnect terminals STK/SIK | Fused terminals SK

Different versions | Features

Fuse-disconnect terminal SIK 10/SIK 10/Z

The fuse-disconnect terminals features a hinged hinged lever that can be locked into its open position for supporting the micro-fuse. The terminals are available in variants with or without a status display.

Features of the SIK 10/SIK 10/Z

- Combi-foot can snap on to **TS 32/TS 35** rails
- Connection cross-section up to 10 mm²
- **SIK 10** holds fuses (5 x 20/5 x 25/5 x 30)
- **SIK 10 Z** holds fuses (6.3 x 32/6.3 x 25)
- Two or three disconnect levers can be coupled and operated simultaneously by using the **VBS** connection sleeves
- The status display can be snapped on retroactively
- Can be used with solid link as disconnect terminal

Fuse-disconnect terminal STK 1/STK 2

The **STK 1** and the **STK 2** fuse-disconnect terminals feature a compact shape so they take up minimal space. The hinged hinged lever is used to hold the fuse and locks into its open position. LED status displays are available for a variety of voltage ranges.

Features of the STK 1/STK 2

- Combi-foot snaps on to **TS 35/TS 32** or mounting foot for the **TS 15** rail
- Connection cross-section up to 4 mm²
- **STK1** and **STK2** hold fuses (5 x 20/5 x 25)
- Compact design
- Can be used with solid link as disconnect terminal

Fused terminal SK 1

The SK 1 fused terminals with screw cap are designed for micro-fuses that are 5 x 20-sized (without indicator) and 5 x 25-sized (with indicator).
Fuses are screwed into the fused terminal via the screw cap. Status displays using LEDs, neon indicator lamps or glow lamps are available for a wide variety of voltage ranges.

Features of SK 1

- Terminal housing **PA 6.6 UL 94-V0** glass-fibre reinforced
- High continuous-use temperature range
- Fuses are screwed into the fused terminal via the screw cap
- Fused terminals are available with status displays for a variety of voltage ranges

Fuse-disconnect terminals SIK

Screw connection system

- Foot can be snapped on TS 32 and TS 35 DIN rails
- Housing made from polyamide 6.6 UL 94-V2

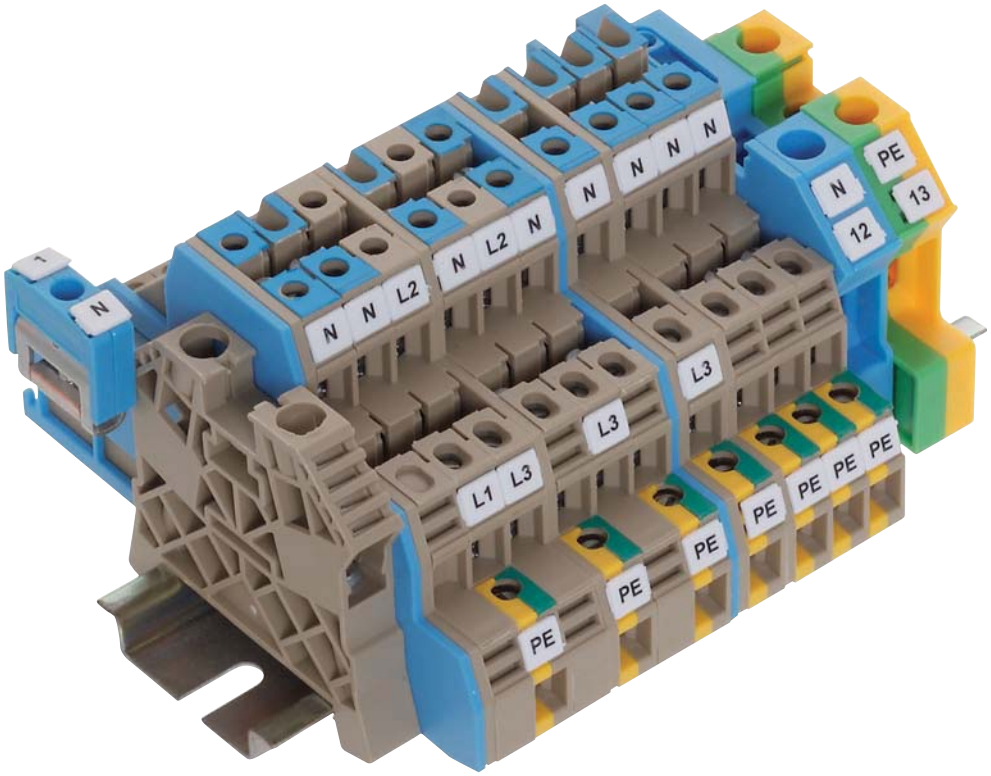
Three-wire installation terminals DLIS/DLI

VDE 100 (IEC 364) and VDE 0108 establish the requirement that a circuit's association must be clearly detectable. They also require that an insulation test can be performed on each terminal without disconnecting the N-wire. This is a specific requirement for public buildings such as hospitals, schools, airports, office buildings and institutions.

The relevant busbar is positioned on the outside of the terminals and held in place using the **HP** support plates. A sliding contact that contacts both sides of the busbar is used to connect and disconnect. This sliding contact permits functional testing independent of the operational mode.

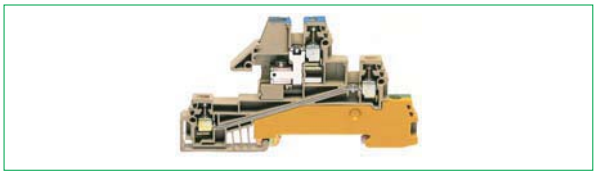


Three-wire installation terminals DLIS/DLI

The features in detail

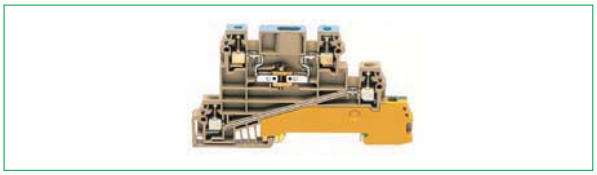
Installation terminals for neutral rails 10 x 3

Neutral cross-connections via the **Ssch** busbar system: **10 x 3** up to 140 A. Power is supplied using a separate clamping yoke or with an NT disconnect terminal.



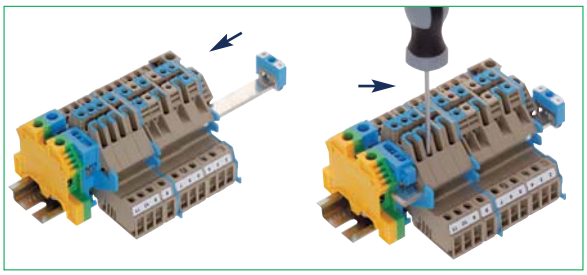
Installation terminals for neutral cross-connection systems

The neutral cross-connection takes place with the **Q** standard cross-connection system (up to 24 A). Power is supplied directly using the neutral connection of the terminal block.



Contacting and fitting of neutral busbars

The neutral disconnect terminals can hold a 10 x 3 mm neutral busbar. A fixing plate is required for the mechanical attachment. They must be attached to the start and end of the terminal strip unit. For longer applications, fixing plates should also be used in the middle. The neutral slider establishes a safe contact with the busbar. It can be disconnected from within the terminal housing using the screw connection.



Connecting the PE foot onto the DIN rail

As with all **CONTA-CLIP** PE terminals, the **FSL** terminals also implement a two-sided contact with the DIN rail. The **TS 35** is used as the PE busbar.

Block versions

Block version terminals are connected underneath each other with pegs. This results in increased design stability compared with individual terminals. They are quick and easy to connect and require only one hand grip. Removing the blocks is just as quick – using the connected feet with the help of a screwdriver.

General information:

- The three wires (phase/neutral/PE) of a single-phase circuit can be connected to the **DLIS/2.5 PE/L/NT** and the **DLI 2.5/PE/L/NT**.
- The corresponding feed-through connections can be cross-connected.
- Combination options with the standard feed-though, neutral and PE terminals.
- The individual terminals can be swapped out independently of the neighbouring terminals and without removing the neutral busbar.
- The mechanical height of the N busbar is tailored to fit both the DLIS and NT terminals.
- The neutral connections are colour-coded blue and the PE connections are coded green/yellow.

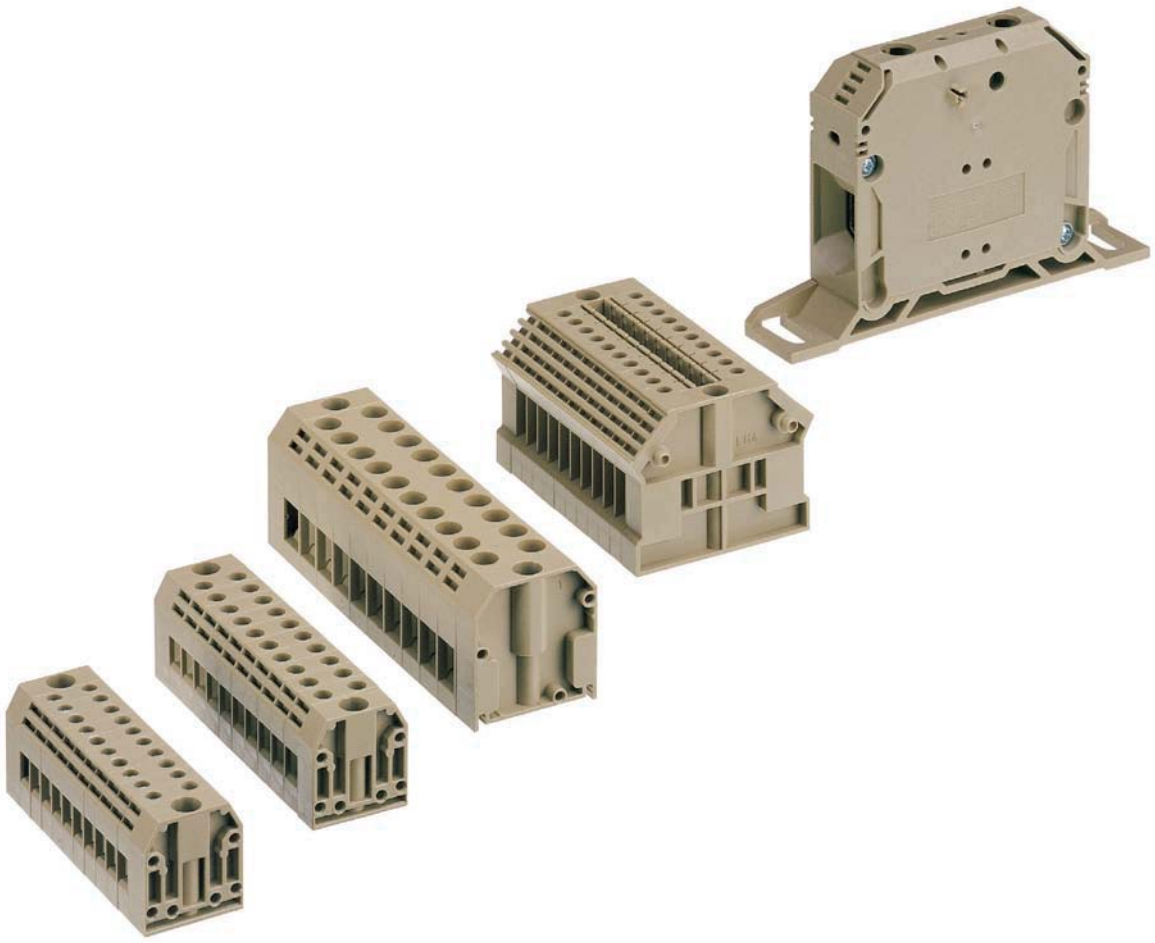
Feed-through terminals for direct, no-rail mounting RKB, BKA, KBL.../RK...-D

The **RKB, BKA** and **KBL...-D** block terminals are cost-effective connection systems which can be snapped together using their pegs to match your required number of poles. An **EH** end support is snapped on to each end of the block terminals. It provides a 3.5-mm hole for a mounting screw. If you are using more poles than available in the **CONTA-CLIP** product line, we recommend using additional **EH** end supports at intervals in order to maintain the stability. We recommend our **MV2/BKA** assembly fixture if you would like to link self-contained **BKA** terminal strips.



Feed-through terminals for direct, no-rail mounting RKB, BKA, KBL.../RK...-D

The features in detail

BKA 2.5/BKA 4 and BKA 10

The housings of the **BKA 2.5/BKA 4** and **BKA 10** block terminals offer touch-safe protection in compliance with VBG 4. The clamping-yoke screw connection system establishes a secure mechanical and electrical contact.

The compact design allows you to use the **BKA** blocks within the most confined spaces. For the **BKA 2.5** and **BKA 4** variants, the **EH 2-Z** with snap-in pegs can be attached instead of the **EH 2**. When using the **EH 2-Z**, the screw and the thread cutting is not necessary. If you need to use a cross-connection, you can make use of the external cross-connections available in our accessories.

Block terminals RKB and KBL...-D

The **RKB** and **KBL...-D** block terminals also provide all of the advantages of rail-mounted terminal blocks (such as the interior cross-connection system). Individual covers, test plugs, cross-connectors, etc. are compatible with the standard **RK** terminal blocks.

Terminal blocks RK 50-D to RK 240-D

The **RK 50-D** to **RK 240-D** terminals are connection elements for direct no-rail mounting with an external screw attachment. These terminals can be installed in any position within the switchgear cabinet and separately from a DIN rail. Individual covers, external cross-connectors, measurement pick-off terminals, etc. are also compatible with the standard terminal blocks.

Feed-though terminals for direct mounting RK...-D

Measurement pick-off terminals MAG

Feed-though terminals for direct mounting RK...-D

The **RK 50-D**, **RK 95-D**, **RK 150-D** and **RK 240-D** terminal blocks are connection elements for direct no-rail mounting with an external screw attachment. The terminal blocks consist of a double-layer insulation housing. The specialized construction of the clamping yoke minimizes the contact resistance between the wire and the busbar. The clamp is tightened using a hex-socket screw which creates the required torque together with the clamping yoke. Pegs are located on the plastic housings of the terminal blocks; these lock to adjacent terminals to increase the mechanical stability. A threaded **M 2.5** bolt can be attached to the injection-moulded pegs in order to further increase the mechanical stability. A diverse line of accessories offers a practical supplement to these products.

MAG measurement pick-off terminals.

The **MAG** measurement pick-off terminals allow you to tap into the voltage on the **RK 50-D**, **RK 95-D**, **RK 150-D** and **RK 240-D** terminal blocks when using wires with small cross-sections ranging from 0.2 to 10 mm². A special socket slot in the **RK 50-D** to **RK 240-D** terminal blocks enables the **MAG** supplemental connections to be added retroactively. They can be independently snapped on to the base housing of the terminal blocks. **MAG** terminals are individually snapped into the housing of the main terminal above the wire entry. The electrical contact is then established using the connection screw on the main-wire terminal of the busbar. This technical solution is safe, clever, and simplifies the wiring significantly. The rated voltage is 1000 V because of the total insulation provided by the pick-off terminal. The **PMC** quick marking system can be used for labelling the terminals.

Pluggable connection system PK-TS

The pluggable **PK-TS** connection system was designed to meet the increasing demands for modularity and flexibility within the fields of electrical cabinet and facility construction.

The system allows you to easily integrate separately wired switchboard panels into the complete installation. The wiring which connects the two switchboard panels is fed out of one panel with the **PK-TS** base element. In the second panel, the corresponding cables are attached to the **PKB/PBT** mate.

The **PK-TS** base element is attached to the DIN rail using mounting feet which are fitted either with a **TS15/35** or **TS32/35** combi-foot for mounting on a **TS15**, **TS32** or **TS35** DIN rail.

After setting up the switchgear cabinets, both panels can be connected quite easily.

You can determine the type of connection mechanism (clamping yoke or cam) when you select the pluggable **PKB/PBT** component of the connection.
The **PK-TS** elements are available with 2 to 24 poles and also with a screw flange.

The **PK-TS** base elements with a screw flange use this flange to connect to the pluggable component. This protects them from accidental loosening.

The connection can be made in a variety of directions (as shown on right), depending on the combination selected (**PK-TS** and **PKB/ PBT**).

In order to avoid a plugging error when using multiple **PK-TS**s in one switchgear panel, both the **PK-TS** and the **PKB/PBT** can be coded without pole loss using the established **CONTA-CON** coding system (refer to the **CONTA-CON** Catalogue).

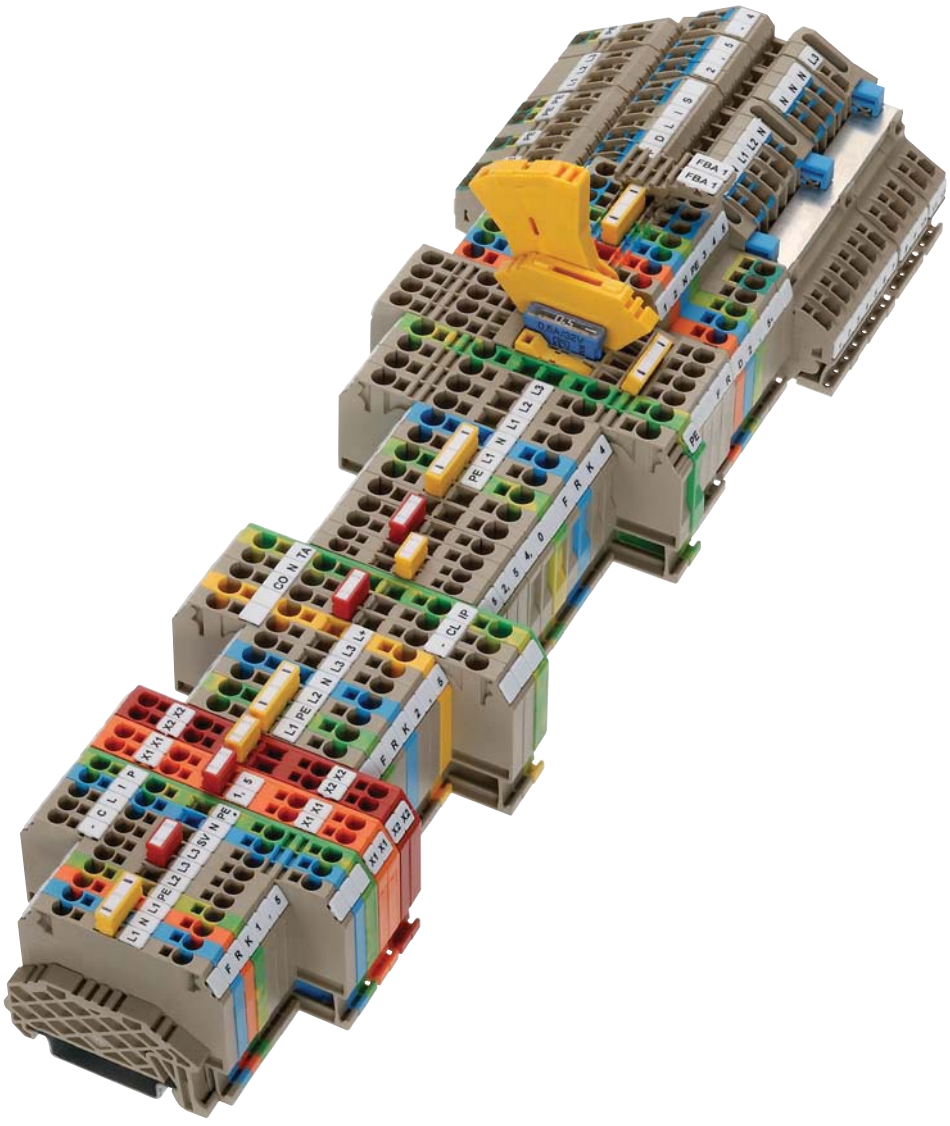
Pressure-spring connection system FRK | FSL *Proven – Safe – Reliable*

CONTA-CLIP offers an innovative line of products with the pressure-spring connection system. They range from the smallest cross-sections of 0.2 mm^2 up to 4 mm^2 in feed-through, PE, disconnect, fuse and installation terminal versions.

This system can be used for a large variety of applications with only a minimal number of accessory parts. The pressure-spring TOP mechanism provides safe and quick connections for solid and stranded wires, with or without wire-end ferrules. Our well-designed line of accessories allows you to significantly reduce your installation and storage costs. The **FQI** pluggable potential distribution system can be used to multiply potential voltages vertically. For this product line, **CONTA-CLIP** uses pollutant-free insulating material with a V0 flammability class that is self-extinguishing in accordance with UL 94.

As with all **CONTA-CLIP** PE terminals, the **FSL** terminals also implement a two-sided contact with the DIN rail. In all the **FSL** series, the foot construction and busbar are made of a single piece of copper. This solid, contiguous construction guarantees low contact resistance as well as the high security of the internal-spring PE contact foot.



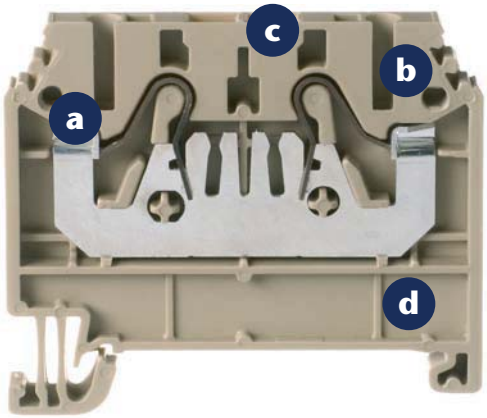
Pressure-spring connection system FRK | FSL

Features

a The connection | Secure contact

The pressure spring at the wire connection is held securely by the positioned busbar.

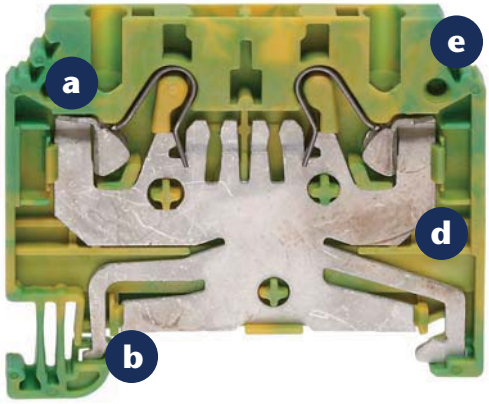
- The stainless steel spring provides permanent contact force between the wire and the busbar.
- Clear separation of electrical and mechanical functions
- The busbars are made from copper with surface coating (tin)
- One-piece construction of busbar and PE foot contact with no contact resistances
- Resistant to vibration and maintenance-free
- Corrosion-free
- Space-saving design

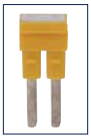


b Wiring is simple and quick – no tools needed for the connection

The easy-to-operate pressure-spring connection mechanism – for solid and stranded wires with wire-end ferrules – reduces wiring time by up to 80%.

- Easy to work with
- Connection without tools
- Generous wire-entry geometry
- Easy to operate, even under cramped working conditions, because of the TOP connection
- Saves time and money
- PE foot contact on both sides – can be snapped on (no screws) to **TS 35x7.5** and **TS 35x15** rails.





c Pluggable cross-connection options

Distributing potentials with the pluggable **SQI** cross-connection system is quick and easy. Two cross-connection channels allow two voltages to be fed across when working with the standard terminals with rated cross-sections of 1.5 mm², 2.5 mm² and 4 mm².

- Available with from 2 to 10 poles
- Simple to insert and thus quicker to install
- No insulation plate or partition plate is required between a neighbouring cross-connection, since the **FQI** has a touch-safe protective design.
- The cross-connections can carry the full rated current and rated voltage of the corresponding terminal block.
- Individual terminals can be skipped over by breaking out contact pins in the cross-connector.

d Housing insulation material

- Polyamide PA6.6 UL 94, flamm. class V0, self-extinguishing without burning drops
- Free of hazardous materials such as halogen or phosphor
- Creepage resistance: CTI 600
- Operating temperature from -40°C to +120°C

e Marking options

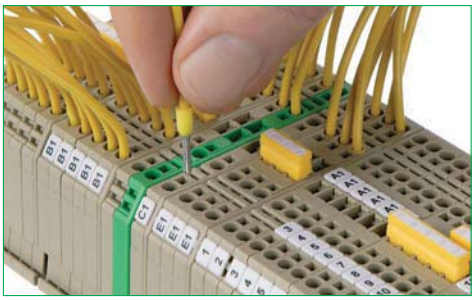
One marking option per connection. If both cross-connection channels are not being used, two additional markers can be positioned with the standard terminals of 1.5 mm² to 4 mm².

Pressure-spring connection system FRK | FSL

An overview of the advantages

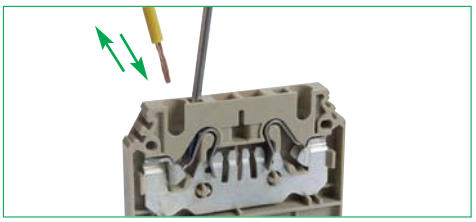
Connection without tools

The **FRK** direct-insert connection requires much less insertion force. This makes it easy to insert solid or stranded wires with wire-end ferrules. The rated cross-sections specified in our documentation correspond to a connection with stranded wires using wire-end ferrules. It is also possible to use solid wires up to the next larger cross-section size.



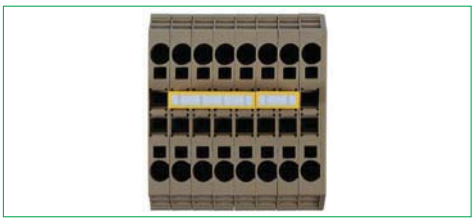
Releasing and separating the contact

A standard screwdriver can be used to open the pressure spring to release a wire, or to contact a stranded wire without a ferrule.



Cross-connection system

When using a doubled cross-connection channel, the two-pole **FQI.../2** cross-connectors can be used to connect any number of terminals with each other.



Distributing potentials

The cross-connector is available with from 2 to 10 poles. Two cross-connection channels allow two voltages to be fed across when working with the standard terminals with rated cross-sections of 1.5 mm^2, 2.5 mm^2 and 4 mm^2.

Skip-over bridging

It is possible to skip over terminal blocks by breaking out individual contact poles. Separated contact elements can be labelled using the plastic insulation of the cross-connector.

Power feed with small cross-sections

With pressure-spring terminals of larger cross-sections, standard cross-connectors can connect to a single terminal of the next size up for the power feed-in. The **FQI** cross-connection system can carry the rated voltage and rated current.

Pressure-spring connection system FRK | FSL

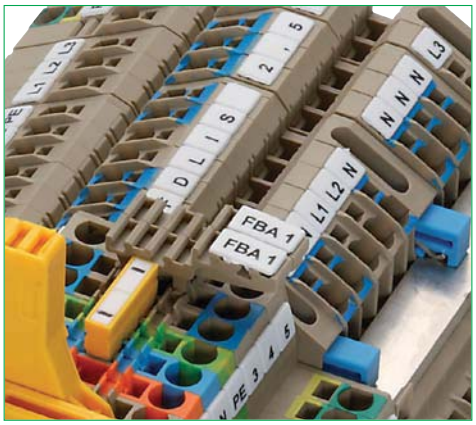
An overview of the advantages

labelling

High-quality, quick and concise labelling is possible when using the **PMC SB**, **PMC BSTR** or **MC** labelling systems. The standard terminals feature up to four labelling channels.

Special marking options

For the multi-level terminals, in addition to the standard holder in the terminal housing you can also make clear labels – even when the terminal is wired up – by using the **FBA** identification adapter. The pluggable **FBA** is attached to the middle of the terminal housing.



An effective and comprehensive range

The feed-through and PE terminals with cross-sections of 1.5mm², 2.5 mm² and 4 mm² are available in two-wire, three-wire and four-wire versions. The standard feed-through terminals in 1.5 mm², 2.5 mm² and 4 mm² have two bridging channels. The product line also includes standard terminals and functional terminals including fused terminals, initiator terminals, disconnect terminals and installation terminals.

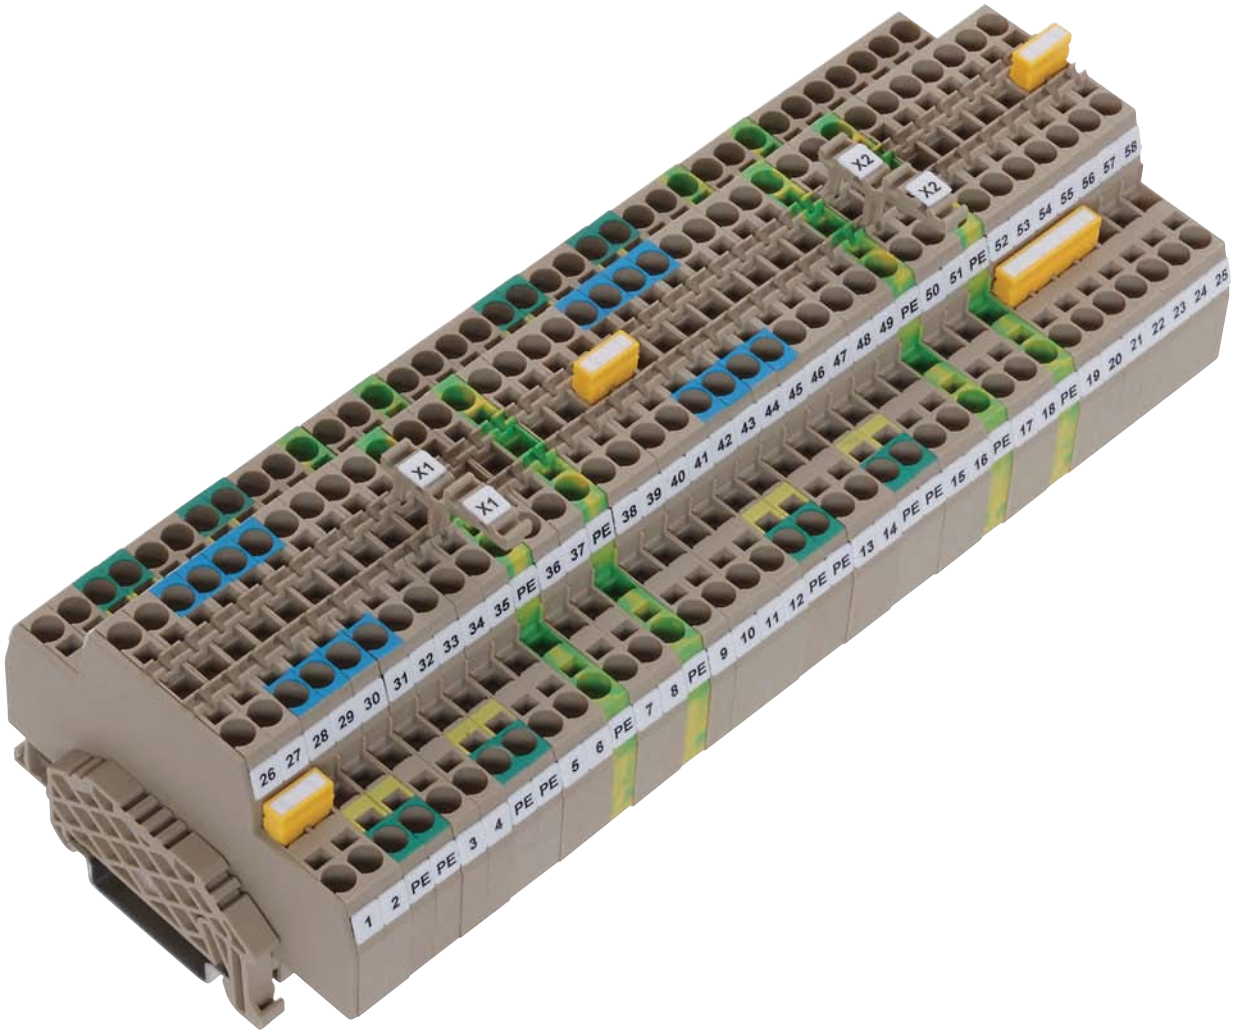
Double-level terminal blocks FRKD 2.5 | Double-level protective earth terminal FSLD 2.5

With a design width of just 5 mm, the new **FRKD** series, available in thirteen versions, connects with stranded or solid wires up to 4 mm² with a rated current of up to 24 A. Solid and stranded wires with wire-end ferrules can be inserted into the connection system without the need for tools. The pressure spring opens automatically when the wire is inserted facilitating a secure contact with the busbar. A standard screwdriver can be used to open the clamp for release or for the insertion of stranded wire without ferrules.

The PE foot from **CONTA-CLIP** that contacts the PE potential to the DIN rail is designed to contact on both sides. This optimal **CONTA-CLIP** design uses more metal but provides a higher conductor cross section and stronger rail grip, for security and safety.

In all the **FSL** series, the foot construction and busbar are made of a single piece of copper. This solid, contiguous construction guarantees low contact resistance as well as the high security of the internal-spring PE contact foot. Each of the pressure-spring terminal blocks can be equipped with the standard accessories: the **FQI 2.5** (cross connector) and the **PMC SB 5** (Pocket-Maxicard quick marking system).

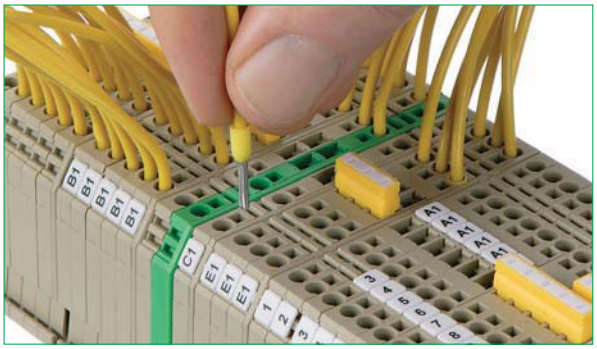


Double-level terminal blocks FRKD 2.5 | Double-level protective earth terminal FSLD 2.5

The features in detail

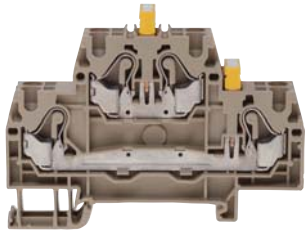
Wire connections

Solid and stranded wires with wire-end ferrules can be inserted into the connection system without the need for tools. The pressure spring opens automatically as the wire is fed in and makes a secure contact with the busbar.
A standard screwdriver can be used to open the clamp for release or for the insertion of stranded wire without ferrules. (Connection cross-section: 4 mm², rated current: 24 A)



Cross-connection system

The upper and lower levels can be cross-connected using the **FQI 2.5/...** standard cross-connections. The **FQI** insulated cross-connections have a pluggable design. They are available with from 2 to 10 poles. They cross connect up to the rated current of the relevant **FRKD** terminals.

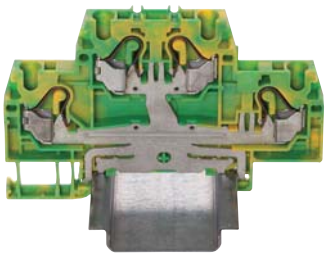


Colour labelling

The upper and lower levels are colour-coded.
(for example, **FRKD 2.5 N-PE**)

Connecting the PE foot onto the DIN rail

As with all **CONTA-CLIP** PE terminals, the **FRKD** terminals also implement a two-sided contact with the DIN rail. In all the **FRK** series, the foot construction and busbar are made of a single piece of copper. This solid, contiguous construction guarantees low contact resistance as well as the high security of the internal-spring PE contact foot.



Double-level terminal blocks FRKD | Double-level protective earth terminal FSLD

Pressure-spring connection system

- Foot can be snapped on TS 35 DIN rail
- Housing made from polyamide 6.6 UL 94-V0

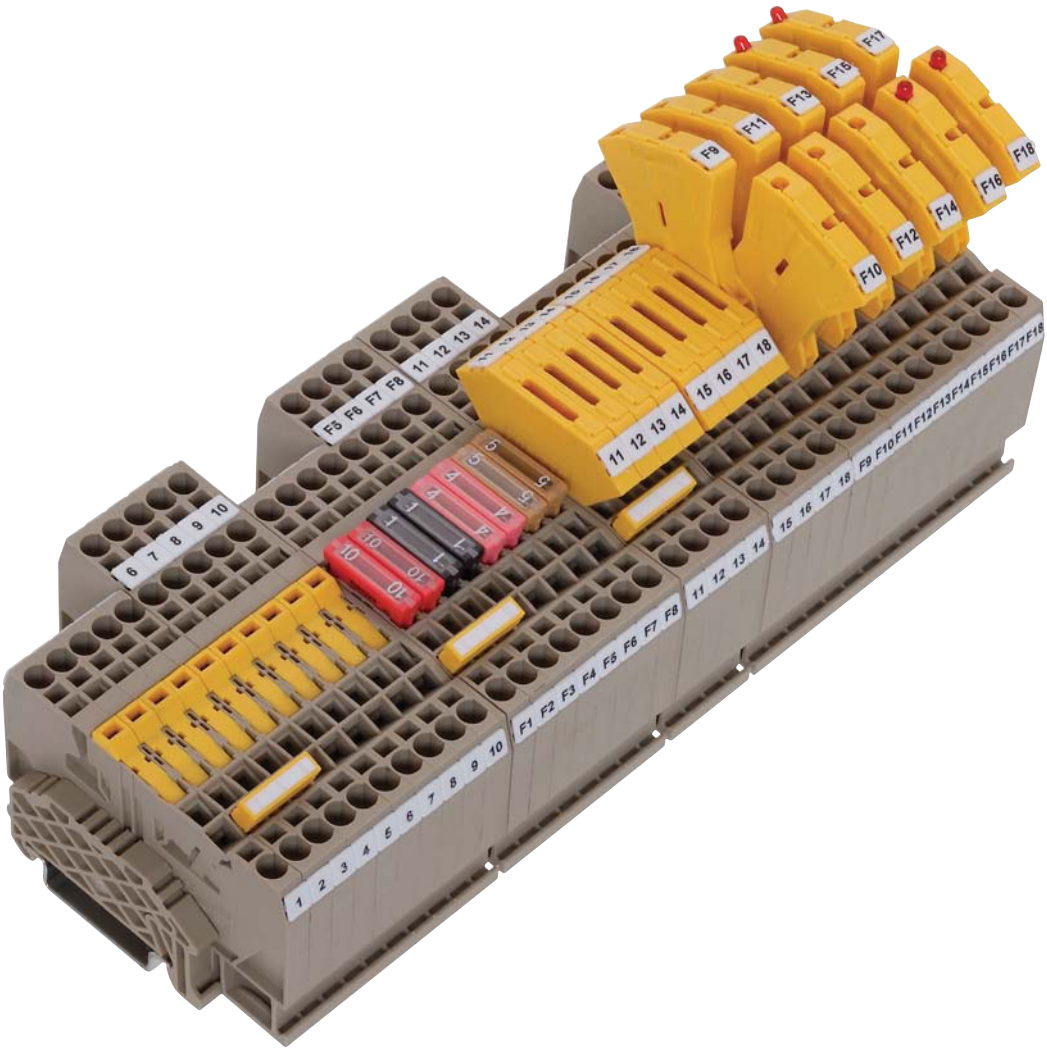
Disconnect-blade terminals | Disconnect terminals | Fused terminals FTRK

The **FTRK** base terminal line can be combined in different ways with the product-related line of accessories as two-wire and three-wire variants. Without any assembly, the two base terminals can receive auto-fuses or diode plugs. Alternatively, the base terminals are available equipped with a disconnect blade or a fuse holder for G fuses. The functions of all versions can be changed by removing or adding the disconnect blade, the fuse holder, or the diode plug. The plug-in fuse holders are available as models with or without a status display. They offer great flexibility, easy handling and a wide selection of 5 x 20 G fuses.

Solid and stranded wires with wire-end ferrules can be inserted into the connection system without the need for tools. The pressure spring opens automatically when the wire is inserted facilitating a secure contact with the busbar. A standard screwdriver can be used to open the clamp for release or for the insertion of stranded wire without ferrules.

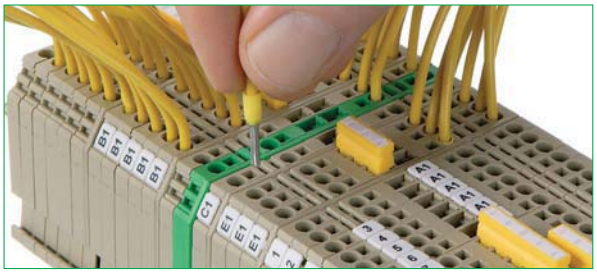
For the fuse and disconnect terminals with pressure-spring connections, there are eight terminals blocks with disconnect blades and disconnect plugs available, as well as a fuse holder for auto-fuses and micro-fuses. Each of the pressure-spring terminal blocks can be equipped with the standard accessories: **the FQI 2.5** (cross connector) and the **PMC SB 5** (Pocket-Maxicard quick marking system).



The features in detail

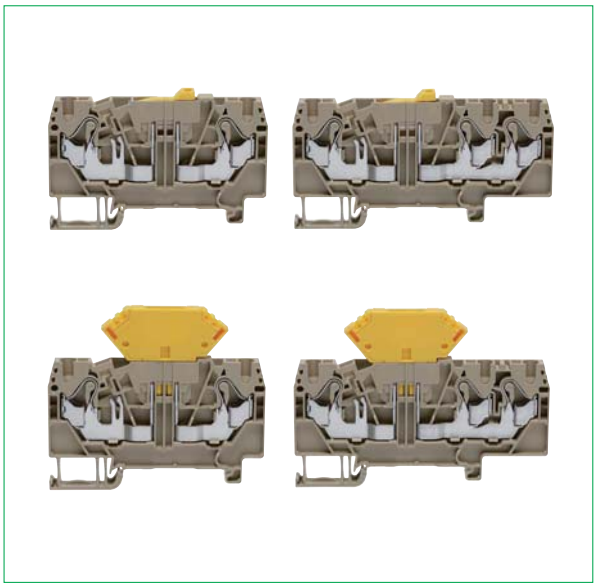
Wire connections

Solid and stranded wires with wire-end ferrules can be inserted into the connection system without the need for tools. The pressure spring opens automatically when the wire is inserted facilitating a secure contact with the busbar. A standard screwdriver can be used to open the clamp for release or for the insertion of stranded wire without ferrules.
(Connection cross-section: 4 mm², rated current: 24 A)



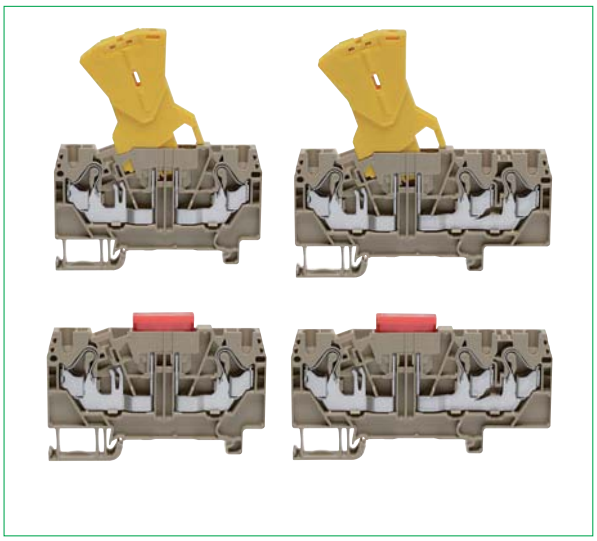
Disconnect terminals FTRK 2.5/.../MT and FTRK 2.5/.../ST

In the pressure-spring system, two models (disconnect-plug/disconnect-blade) are available in the base terminal variations of 2- and 3-conductor systems. The proven **ZDS|ZTR** disconnect-plug and **FTRK 2.5.../MT** disconnect-blade systems with high surface quality and, therefore, low and stable transitional resistance, ensures accurate measurement results. They distinguish themselves by their narrow construction of only 5 mm and a high current capacity of 18 A. In addition to the **ZTR** disconnect-plug models (feed-through connection), **ZDS** diode plugs (1N4007) are also available. It is easy to distribute potential voltages in combination with the pluggable **FQI** cross connectors.



Fuse holder for micro-fuse/auto-fuse FTRK 2.5/.../OT with auto-fuse and FTRK 2.5/.../ZS

The base terminals can hold auto-fuses without needing any accessories. With the fuse plug **ZS/H**, available in five variations, 5x20 fuses can be accommodated. The fuse plugs are available in variations with or without status display (different voltage ranges). With a rated voltage of 400 V, the rated current of the fuse plug is 6.3 A. In combination with the pluggable **FQI** cross connectors, it is easy to distribute voltage potentials.



Cross-connection FQI

The **FQI** insulated cross-connections have a pluggable design and are available with from 2 to 10 poles.
They cross connect up to the rated current of the relevant **FTRK** terminals.

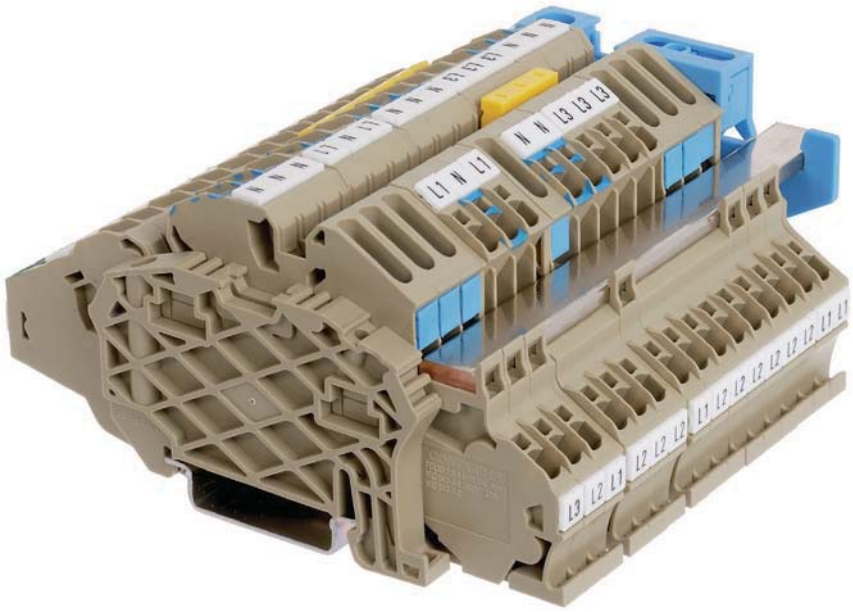
*** When using motor vehicle fuses, the current is limited to 10 amps!**

Three-wire installation terminals FDLIS

With a width of just 5 mm, the new **FDLIS** series is available in seven versions and connects with stranded or solid wires up to 4mm^2 with a rated current of up to 32 A. Solid and stranded wires with wire-end ferrules can be inserted into the connection system without the need for tools. The pressure spring opens automatically when the wire is inserted facilitating a secure contact with the busbar. A standard screwdriver can be used to open the clamp for release or for the insertion of stranded wire without ferrules. The version with neutral disconnection is designed to accommodate a 10 x 3 mm neutral wire busbar. There is no need for an additional fixing plate because the NT terminal snaps the neutral wire busbar securely into place. The result is optimized storage and costs, combined with the added advantage that you save 1.5 mm for each fixing plate no longer needed when mounting side-by-side on the DIN rail.
The PE foot from **CONTA-CLIP** that contacts the PE potential to the DIN rail is designed to contact on both sides. This means that more material is required; however this offers more safety in the area around the protective earth contact.
In addition to the **FDLIS** range of individual terminals and all the advantages that they have to offer, **CONTA-CLIP** also has pre-assembled blocks of terminals on offer. The program contains six different blocks of terminals in common combinations for 1- to 3-phase installation structures. In addition to the above-mentioned advantages that the individual terminals offer, the use of these standard blocks saves time when installing the distribution wiring and results in extra optimization of work flows and storage costs. The special construction of the foot guarantees that these blocks of terminals are simply snapped onto the DIN rail - and can be just as easily removed. Consequently, **CONTA-CLIP** is offering an ideal enhancement to the field of installation technology.



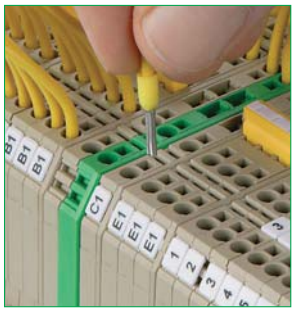
Three-wire installation terminals FDLIS

The features in detail

Wire connections

Solid and stranded wires with wire end ferrules can be inserted into the connection system without the need for tools. Connection cross-section of 4 mm², solid or stranded wire with wire-end ferrule. Rated current 32 A at only 5.1-mm single-terminal width. **FQI** cross-connections are pluggable and insulated. They are available from 2 to 10 poles and can be used to safely distribute current on the **FDLIS** terminals.

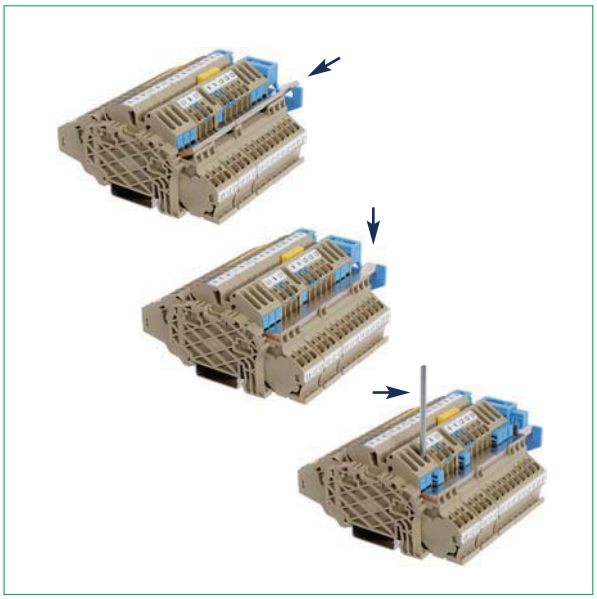
Insert FQI



Connection without tools

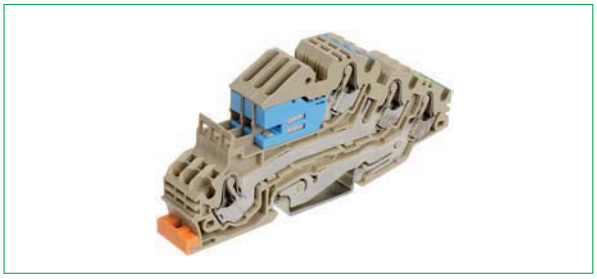
Attaching and contacting neutral busbars

The neutral disconnect terminals have an integrated fitting and mounting system for the 10 x 3 mm neutral busbars. Thus, an additional fixing plate is not needed and design width is decreased for the terminal construction. Another advantage is the reduction in storage costs. The NT rail is quickly and securely connected with the terminal via a self-connecting, no-screw NT slider.



Connecting the PE foot onto the DIN rail

As with all **CONTA-CLIP** PE terminals, the **FDLIS** terminals also implement a two-sided contact with the DIN rail. In all the **FRK** series, the foot construction and busbar are made of a single piece of copper. This solid, contiguous construction guarantees low contact resistance as well as the high security of the internal-spring PE contact foot.



Block versions

Block version terminals are connected underneath each other with pegs. This results in increased design stability compared with individual terminals. All **CONTA-CLIP** block versions can be quickly and easily snapped on, with one hand grip, using a special latch in the terminal foot. Removing the blocks is just as quick – using the connected feet with the help of a screwdriver.

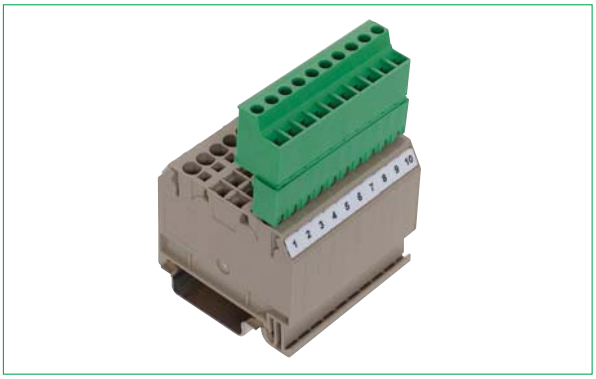
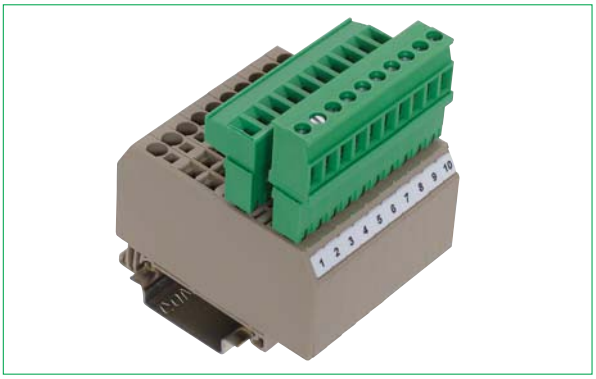
Plug adapter for the FRK pressure-spring connection system in 5.08-mm pitch

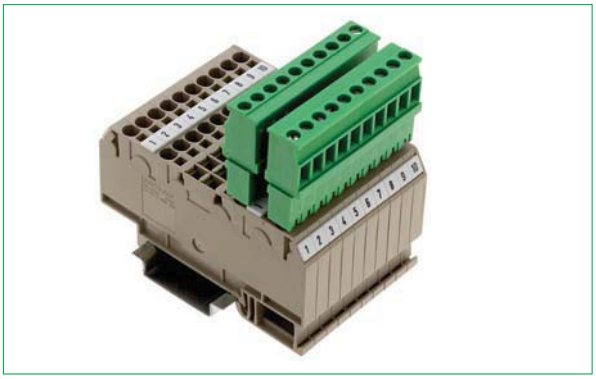
CONTA-CONNECT together with CONTA-CON



FRK 2.5/2A combined with the STL 950/10/5.08-V-G-L

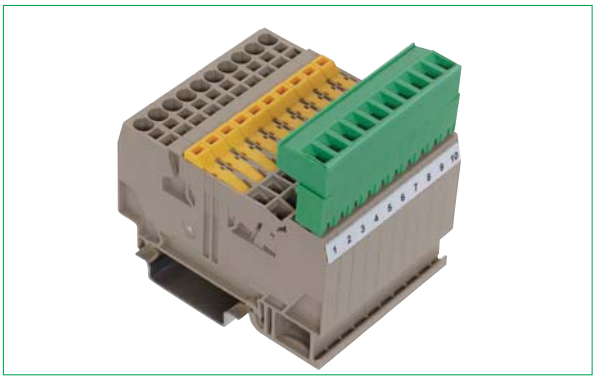


FRK 2.5/3A combined with the STL 950/10/5.08-V-G-L



FRK 2.5/4A combined with the STL 950/10/5.08-G-L

FRKD 2.5 combined with the STL 950/10/5.08-G-L



FTRK 2.5/2A MT combined with the STL 950/10/5.08-V-G-L

FRK 2.5/3A with the BW 10 actuating tool

The standard **FRK 2.5**, **FRKD 2.5** and **FTRK2.5** pressure-spring terminals from the **CONTA-CONNECT** line can be retroactively converted to pluggable versions by using the **STL 950/.../5.08-V-G-L** male pin headers.

It is quick and easy to connect each connection level with the pin header.

The **BW** actuating tool (available in 1 to 10 poles) can be used to open up to ten springs simultaneously. This simplifies and accelerates the installation process.

The combination of the **FRK** pressure-spring technology and the **CONTA-CON** PCB connectors results in a dramatic reduction in expensive final-assembly overhead. It also enables quick replacements during maintenance and commissioning work. Coding without pole loss is possible with all combinations. (Refer to the coding section of the **CONTA-CON** Catalogue.)

Note: With voltage up to 42 V, connectors may only be plugged in or disconnected when under no load. When assembling the output side of the tension-spring terminals with **STL 950/.../5.08-V-G-L** pin headers, the rated voltage must not exceed 50 V since the live-voltage pin headers offer no touch-safe protection when unplugged.

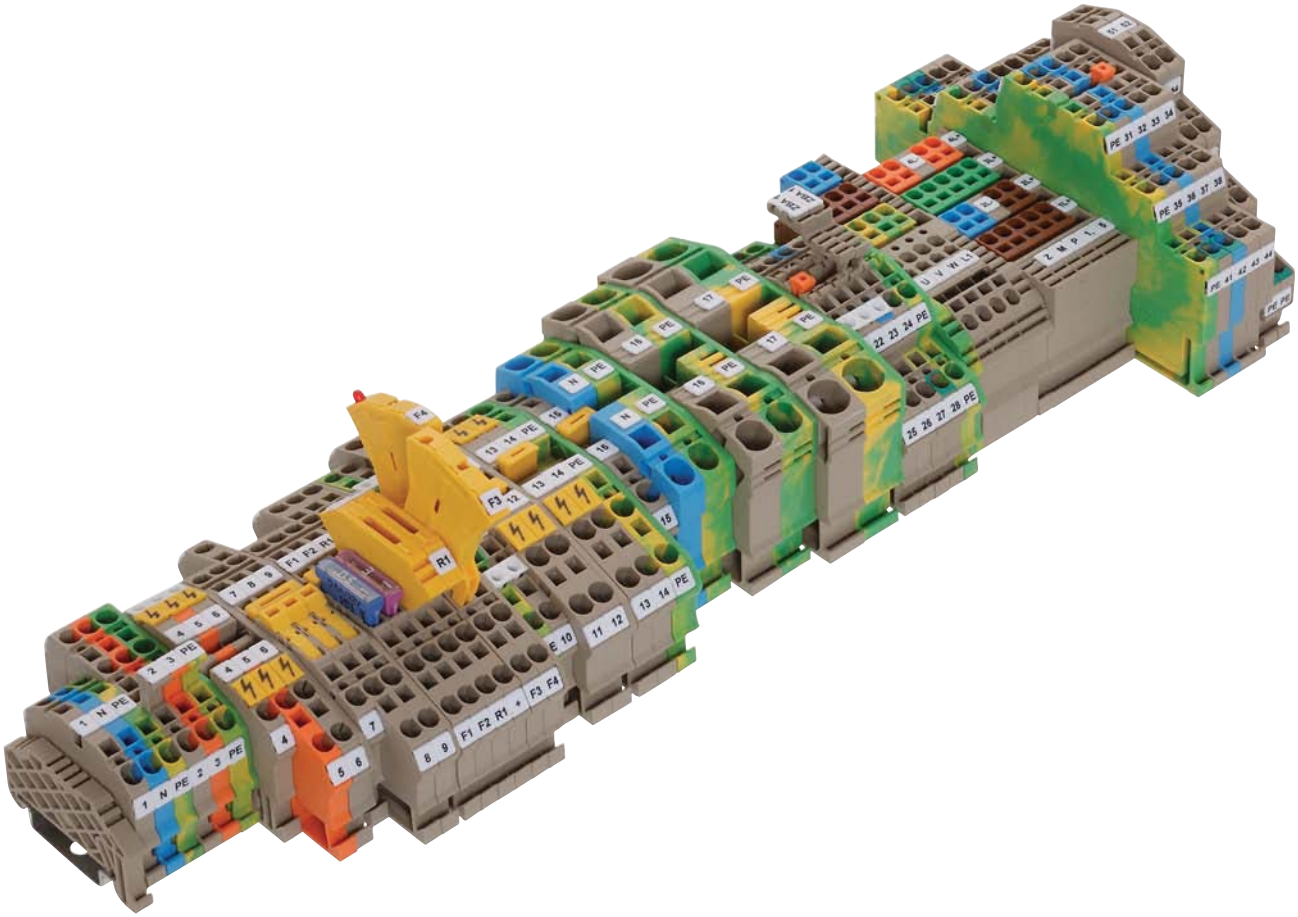
Tension-spring connection system ZRK | ZSL *Proven – Safe – Reliable*

CONTA-CLIP offers an innovative product line featuring the proven tension-spring connection system for the smallest cross-sections ranging from 0.2 mm^2 to 16 mm^2. This includes feed-through and protective-earth terminal, disconnect terminals, fused terminals, actuator terminals, sensor terminals, motor-connection terminals and direct-mounting terminals. The tension-spring top mechanism provides safe and quick connections for solid and stranded wires, with or without wire-end ferrules. The protective-earth terminals feature a PE foot contact that is snapped on, ensuring mechanical and electrical safety. The PE foot contact is on both sides of the PE terminals and can be snapped on to the DIN rail with no screws. Our well-designed line of accessories allows you to significantly reduce your installation and storage costs. You can multiply voltage potentials horizontally or vertically with the ZQI and ZVQI pluggable potential distribution systems. All of the insulating materials used in this product line are free of pollutants. They also comply with flammability class V0 (self-extinguishing) according to UL 94.



Tension-spring connection system ZRK | ZSL

Features

a The connection | Secure contact

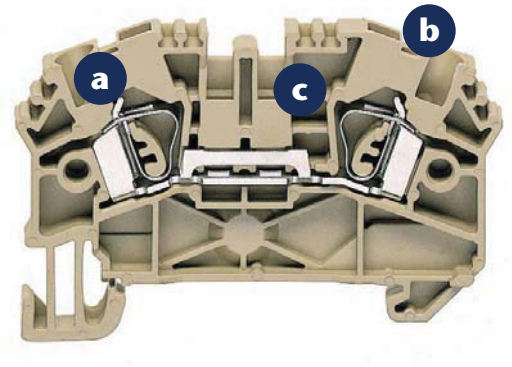
The tension-spring at the wire connection is held securely by the positioned busbar.

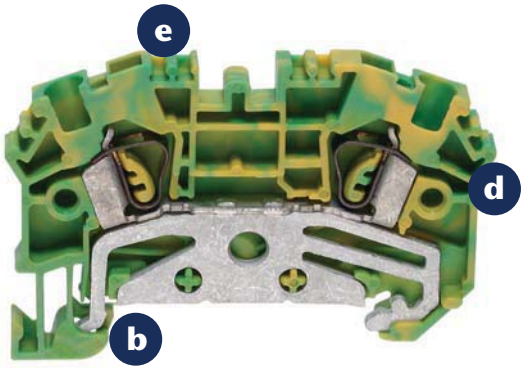
- The stainless steel spring provides permanent contact force between the wire and the busbar
- Clear separation of electrical and mechanical functions
- The busbars are made from copper with surface coating (tin)
- Resistant to vibration and maintenance-free
- Corrosion-free
- Space-saving design
- Foot base can be snapped on TS 35 DIN rail

b Quick and easy to wire

Less time spent wiring thanks to the easy-to-operate tension-spring connection mechanism.

- Easy to work with
- Easy to operate, even under cramped working conditions, because of the TOP connection
- Generous wire-entry geometry
- Saves time and money
- PE foot contact on both sides – can be snapped on (no screws) to **TS 35x7.5** and **TS 35x1**5 rails





c Pluggable cross-connection options

Distributing potentials with the pluggable **ZQI** cross-connection system is quick and easy. Two cross-connection channels allow two voltages to be fed across when working with the standard terminals with rated cross-sections of 2.5 mm² and 4 mm².

- Available in 2 – 10 and 99 poles (for custom assemblies)
- Simple to insert and thus quicker to install
- No insulation plate or partition plate is required between a neighbouring cross-connection, since the ZQI has a touch-safe protective design
- Cross-connection can carry the full rated current and voltage of the corresponding terminal block
- Individual terminals can be skipped over by breaking out contact pins in the cross-connector

d Housing insulation material

- Polyamide PA6.6 UL 94, flamm. class V0, self-extinguishing without burning drops
- Free of hazardous materials such as halogen or phosphor
- Creepage resistance: CTI 600
- Operating temperature from -40°C to +120°C

e Marking options

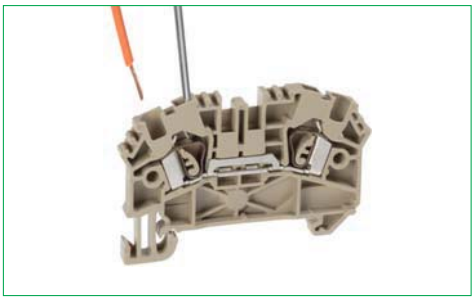
Marking options are available for the standard terminals in 2.5 mm² to 16 mm².

Tension-spring connection system ZRK | ZSL

An overview of the advantages

Less wiring time |
Compact shape

The tension-spring connect system – thanks to its TOP connection and compact shape – provides an advantage when wiring in cramped working conditions.



More spacious connection space

The larger connection space offered by the ZRK | ZSL tension-clamp terminals speeds up wiring for solid or stranded wires with or without wire-end ferrules. The rated cross-sections specified in our documentation correspond to a connection with stranded wires using wire-end ferrules. It is also possible to use solid wires up to the next larger cross-section size.

Cross-connection system

The standard feed-though terminals in 2.5 mm² and 4 mm² feature two cross-connection channels. So the two-pole **ZQI.../2** cross-connectors can be used to connect any number of terminals with each other.

Distributing potentials

The cross-connectors are available from 2 to 10 poles and with 99 poles. Two cross-connection channels allow two voltages to be fed across when working with the standard terminals with rated cross-sections of 2.5 mm² and 4 mm².

Skip-over bridging

It is possible to skip over terminal blocks by breaking out individual contact poles. You can mark these broken-off contact elements using the plastic insulation of the cross-connector.

Power feed with small cross-sections

With tension-spring terminals of larger cross-sections, standard cross-connectors can connect to a single terminal of the next size up for the power feed-in. The ZQI cross-connection system can carry the rated voltage and rated current.

Tension-spring connection system ZRK | ZSL

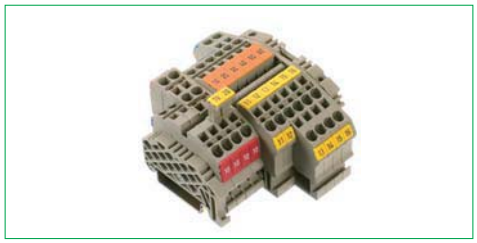
An overview of the advantages

Vertical connection for multi-level terminals

The different levels of the double-level and triple-level terminals can be connected electrically using a vertical connector.

Labelling

High-quality, quick and concise labelling is possible when using the **PMC SB**, **PMC BSTR** or **MC** labelling systems. The standard terminals feature up to four labelling channels.

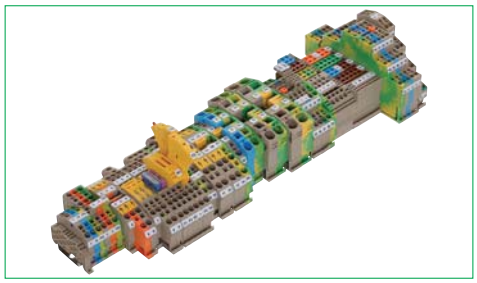


Additional marking options

In addition to the standard holder in the terminal housing, you can also label the multi-level terminals. The **ZBA** labelling adapter can be attached to the middle of the terminal housing – even when the terminal is wired up.

An effective and comprehensive range

The feed-through and PE terminals with cross-sections of 2.5 mm^2 to 4 mm^2 are available in two-wire, three-wire and four-wire versions. The product line also includes standard terminals and functional terminals including fused terminals, initiator terminals, disconnect terminals and direct-mounting terminals.



Testing assembled terminal blocks

The ZTA test adapters can be assembled to any pole counts using the locking pegs. They can be used to test assembled terminal block strips in a quick and safe manner. Wire cross-sections ranging from 0.5 mm^2 to 1 mm^2 can be connected. Each tension-clamp terminal has a corresponding test point for establishing contact to the potential voltage on the busbar.

A comprehensive line of accessories

is available starting at page 264.

- DIN rails
- Mechanical attachment | end stop
- Group marker holders
- End plates | Visual separation

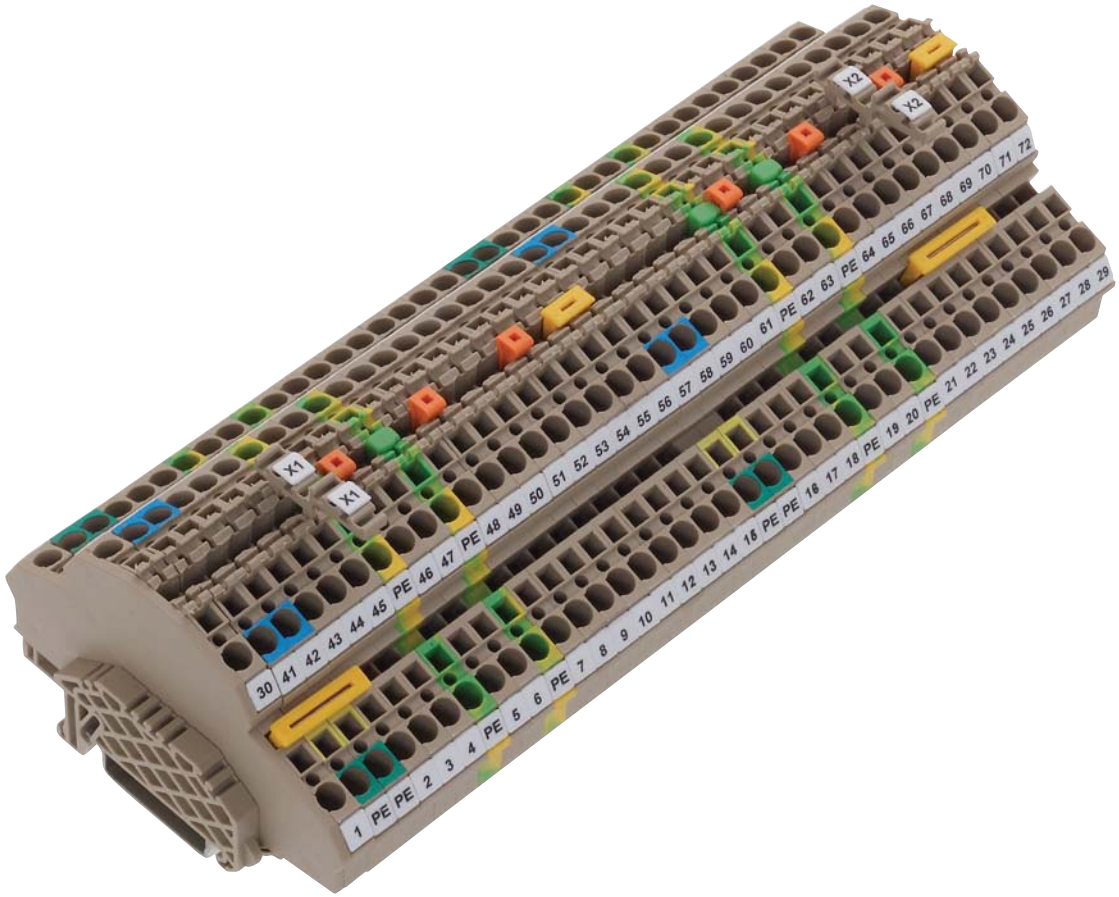
Double-level terminal blocks ZRKD 2,5 | Double-level protective earth terminal ZSLD 2,5

With a width of just 5 mm, the new **ZRKD** series is available in thirteen versions and connects with stranded or solid wires up to 24 mm² with a rated current of up to 24 A. Solid and stranded wires with wire-end ferrules can be inserted into the connection system with a tool or standard screwdriver. Inserting the tool opens the tension spring for easy conductor insertion. When closed, the conductor is securely clamped against the internal busbar.

The PE foot from **CONTA-CLIP** that contacts the PE potential to the DIN rail is designed to contact on both sides. This means that more material is required; however this offers more safety in the area around the protective earth contact.

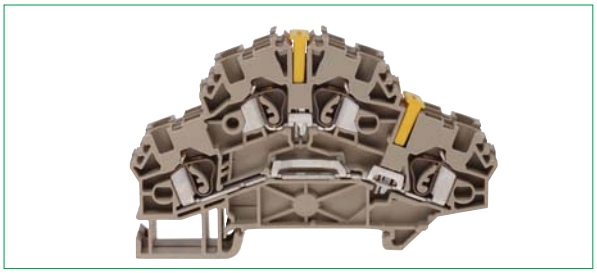
In all the **ZSL** series, the foot construction and busbar are made of a single piece of copper. This solid, contiguous construction guarantees low contact resistance as well as the high security of the internal-spring PE contact foot.



The features in detail

Cross-connection system

The upper and lower levels can be cross-connected using the **ZQI 2,5/...** standard cross-connections. The **ZQI** insulated cross-connections have a pluggable design and are available with from 2 to 10 poles. They cross connect up to the rated current of the relevant **ZRKD** terminals.

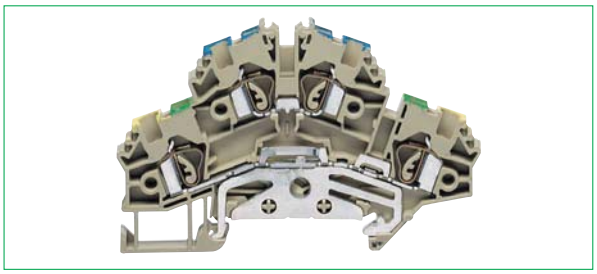


Vertical connection ZVQI

The upper and lower levels can be connected to each other using the **ZVQI** vertical cross-connector.

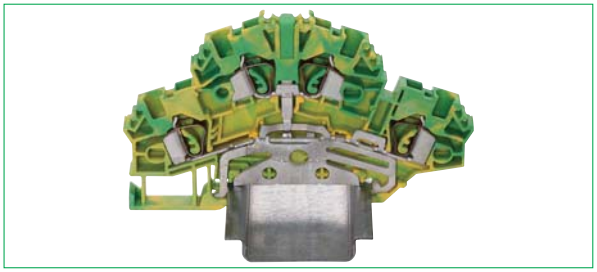
Colour coding

The upper and lower levels can be supplied with colour splash to indicate /N blue and /PE Green/Yellow (for example, **ZRKD 2,5 N-PE**).



Connecting the PE foot onto the DIN rail

As with all **CONTA-CLIP** PE terminals, the **ZSLD** terminals also implement a two-sided contact with the DIN rail. In all the **ZRK** series, the foot construction and busbar are made of a single piece of copper. This solid, contiguous construction guarantees low contact resistance as well as the high security of the internal-spring PE contact foot.



Double-level terminal blocks ZRKD | Double-level protective earth terminal ZSLD

Tension-spring connection system

- Foot can be snapped on TS35 DIN rails
- Housing made from polyamide 6.6 UL 94-V0

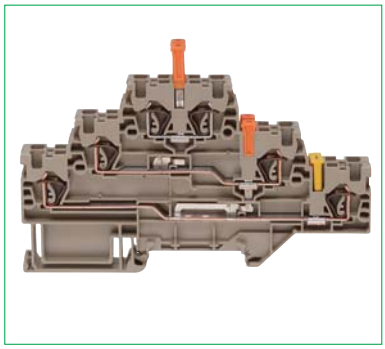
Three-level terminal blocks ZIKD

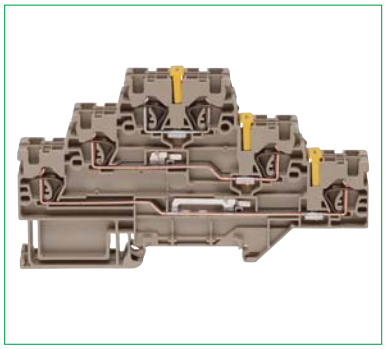
Three-level terminal blocks ZIKD 2,5

The **ZIKD 2,5** terminal blocks have a width of 5 mm and are available in a variety of designs. They have three levels with six connection points and can handle solid or stranded wires up to 2.5 mm² with a rated current up to 24 amps. The lower level is designed as a feed-through or PE connection. All levels can be cross-connected to neighbouring terminal blocks. You can also use a vertical connector to bridge them within a terminal block.

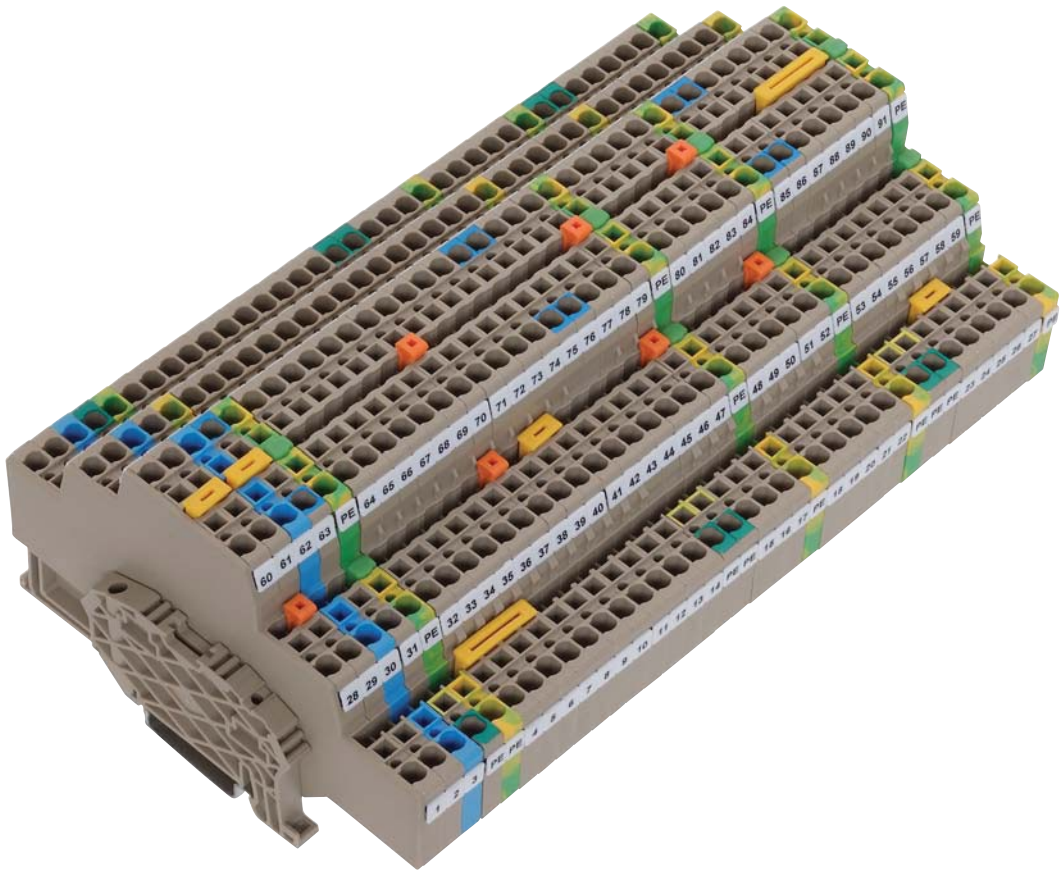
PE foot on both sides



Vertical connection ZVQI



Cross-connection ZQI on 3 levels



Motor-connection terminal ZVMAK

Four-level terminal blocks ZVMAK 2,5

The **ZVMAK 2,5** has a width of 5 mm. It has four levels with seven connection points and can handle solid or stranded wires up to 2.5 mm² with a rated current up to 24 amps. The lower level is designed as a PE connection. The PE foot contacts both sides of the DIN rail, thus ensuring optimal electrical security.

The **ZVMAK** motor-connection terminals can be cross-connected using the **AQI** external cross connection.

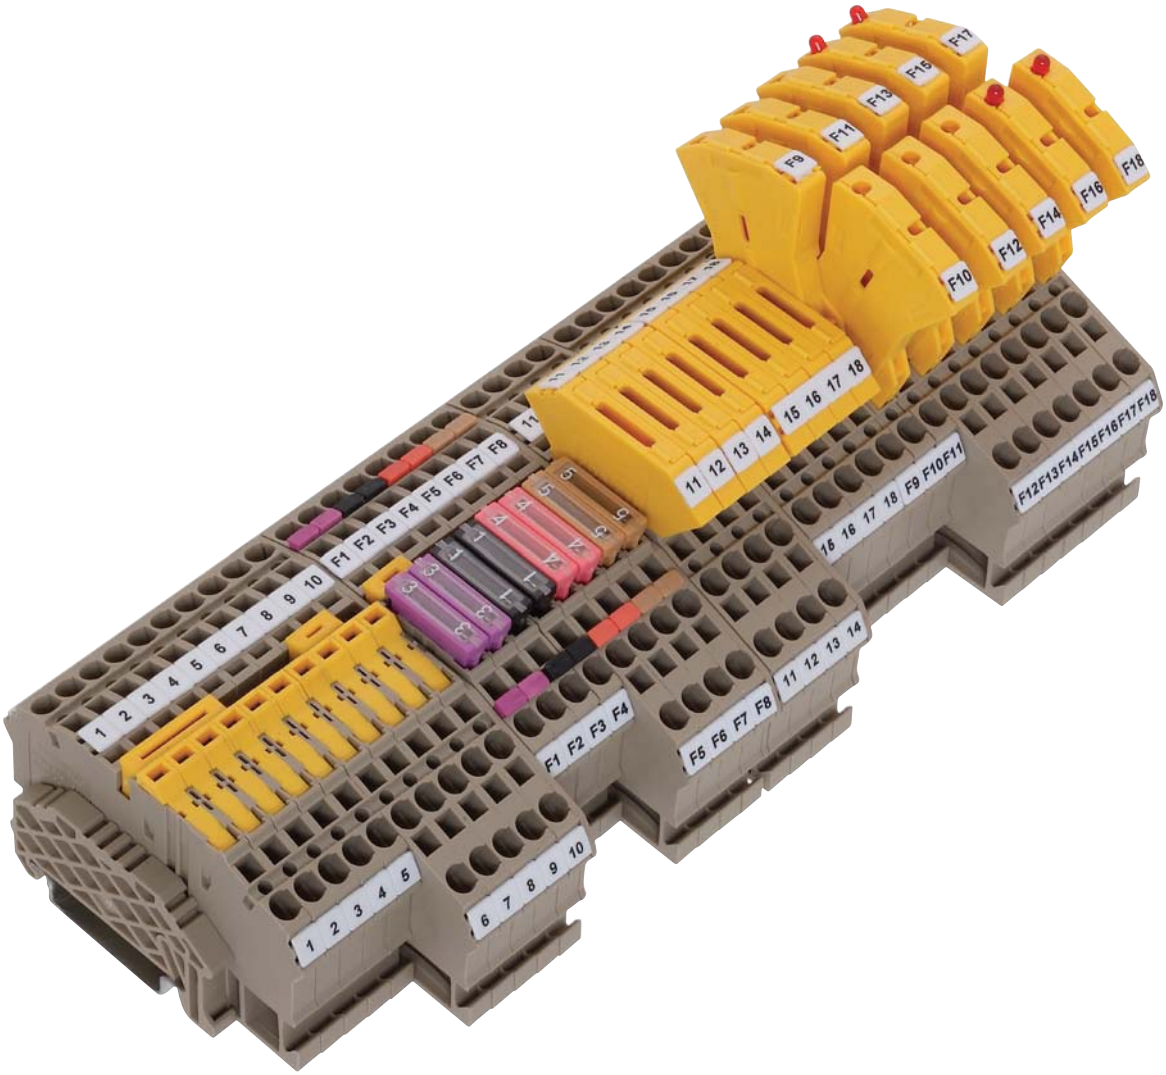
Disconnect-blade terminals | Disconnect terminals | Fused terminals ZTRK

The **ZTRK** base terminal line can be combined in different ways with the product-related line of accessories as two-wire, three-wire and four-wire variants. Without any assembly, the three base terminals can receive auto-fuses or diode plugs.

Alternatively, the base terminals are available equipped with a disconnect blade or a fuse holder for G fuses. The functions of all versions can be changed by removing or adding the disconnect blade, the fuse holder, or the diode plug. The plug-in fuse holders are available as models with or without a status display. They offer great flexibility, easy handling and a wide selection of 5x20 G fuses.
Solid and stranded wires with or without wire-end ferrules can be inserted into the connection system with the use of an actuating tool. The tension spring establishes a secure contact between the conductive wire and the busbar.

For the fuse and disconnect terminals with tension-spring connections, there are many terminals blocks with disconnect blade and disconnect plug available, as well as a fuse holder for auto-fuses and micro-fuses. Each of the tension-spring terminal blocks can be equipped with the standard accessories: the **ZQI 2,5** (cross connector) and the **PMC SB 5** (quick marking system).



The features in detail

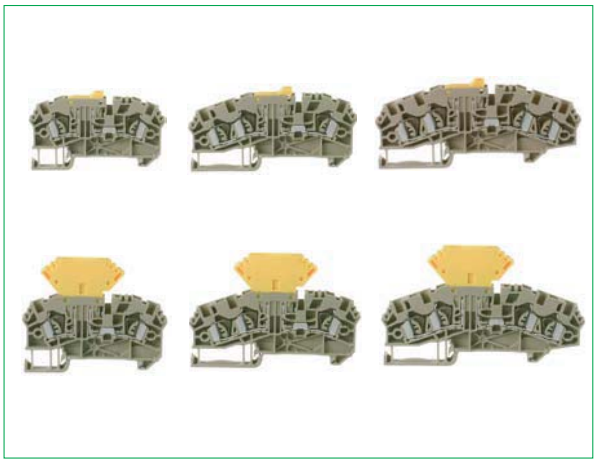
Wire connections

Solid and stranded wires with or without wire-end ferrules can be inserted into the connection system with the use of an actuating tool. The tension spring establishes a secure contact between the conductive wire and the busbar.

(Connection cross-section: 4 mm², rated current: 24 A)

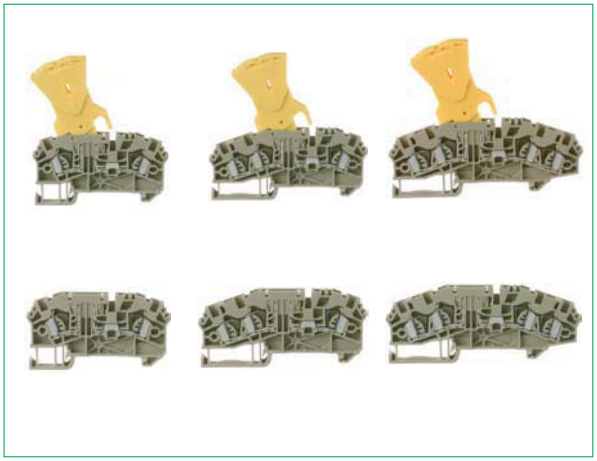
Disconnect terminals ZTRK 2,5/.../MT and ZTRK 2,5/.../ST

Disconnect terminals are often used in measurement, regulation and control technology in order to simplify troubleshooting and in order to be able to commission new systems or carry out revisions on older systems. In the tension-spring system, two models (disconnect-plug/disconnect-blade) are available in the base terminal variations of 2-, 3- and 4- wire systems The proven **ZDS|ZTR** disconnect-plug and **ZTRK 2,5.../MT** disconnect-blade systems with high surface quality and, therefore, low and stable transitional resistance, ensures accurate measurement results. They distinguish themselves by their narrow construction of only 5 mm and a high current capacity of 18 A. In addition to the **ZTR** disconnect-plug models (feed-through connection), **ZDS** diode plugs (I N 4007) are also available. It is easy to distribute potential voltages in combination with the pluggable **ZQI** cross connectors.



Fuse holder for micro-fuse/auto-fuse ZTRK 2,5/.../OT with auto-fuse and ZTRK 2,5/.../ZS

The base terminals can hold auto-fuses without needing any accessories. With the fuse plug **ZS/H**, available in five variations, 5x20 fuses can be accommodated. Due to the special construction of the base terminal/fuse holder, the fuse plugs can be inserted in alternate directions on a pitch of only 5 mm. The fuse plugs are available in variations with or without status display (different voltage ranges). With a rated voltage of 400 V, the rated current of the fuse plug is 6.3 A. In combination with the pluggable **ZQI** cross connectors, it is easy to distribute voltage potentials. A measurement pick-off can be made on each individual terminal block using the test channel and the **ZTA 2,5** test adapter of the PS 2.3 test plug.



Cross-connector ZQI

The **ZQI** insulated cross-connections have a pluggable design and are available with from 2 to 10 and 99 poles. They cross connect up to the rated current of the relevant **ZTRK** terminals.

Disconnect-blade terminals | Disconnect terminals ZTRK

Tension-spring connection system

- Foot can be snapped on TS35 DIN rails
- Housing made from polyamide 6.6 UL 94-V0

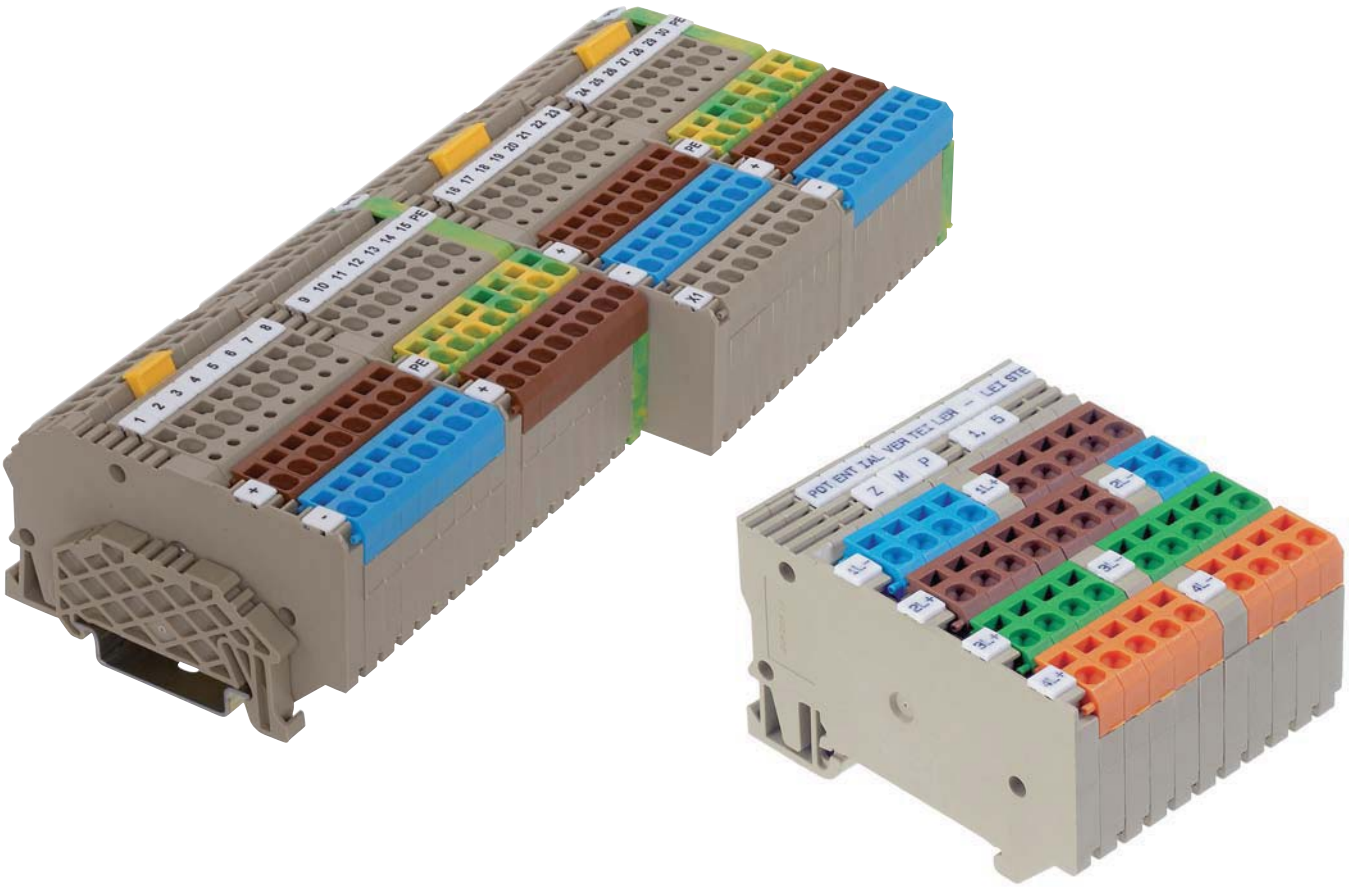
Initiator terminals / Actuator terminals ZINI/ZAKTO | Potential distribution system ZMP

In order to start-up electromechanical functions in machinery and facilities, a link must be established from signal emitters (such as initiators, limit switches and pressure monitors), actuators (such as valves) and alert sources (such as indicator lights and flashing beacons) with the controller. These signals are consolidated in decentralized units in order to reduce the wiring overhead and speed up the troubleshooting process. Exacting demands are placed on the connection system that is used in the cramped, hard-to-reach installations for machinery and facilities.

Our **ZINI/ZAKTO** – consisting of the **ZIZA** base terminals and the **ZPL** potential distribution strip – is perfectly suited for such exacting requirements. The **ZIZA** base terminal is designed to feed the sense/control signal level through. It enables the attachment of **ZPL** potential distribution strips (plus, minus and PE potentials). The potential distribution strip consists of a individual slice each having one electrical connection. Depending on the application, these individual slices can be linked to achieve the required number of poles. No additional cross-connector is needed since the potential distribution strip established its own electrical cross-connection using the base terminal.

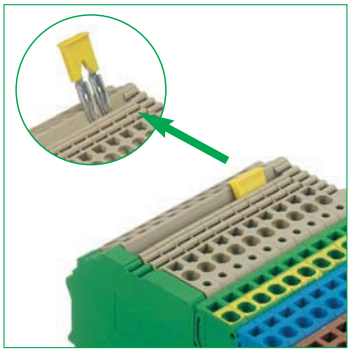
The **ZMP 1,5** potential distribution system makes it possible for the encoder, input, and control voltages (required centrally) to distribute their voltage supplies. It is easy to work with because of the modular design. The number of poles required is determined by the user's application. The **ZMP** consists of **ZMP 1,5** base terminals with four slots for plugging in the **ZPL** potential distribution strips. The patented, integrated cross-connection system on the **ZPL** potential distribution strip results in reduced costs and less time spent with cross-connections. The potential distribution strips are colour-coded (beige, reddish brown, blue, green-yellow, yellow, green, orange and red). Four potentials – together with the **ZBA** labelling adapters – can be led in parallel in addition to many adjacent potentials. The system is compact, modular, and easy to work with. It is designed for 400 V and a current of 17.5 A. The **PMC SB** and **PMC BSTR** quick marking systems can be used for clear and convenient labelling on the **ZMP 1,5** base terminals and on the **ZBA** labelling adapters.



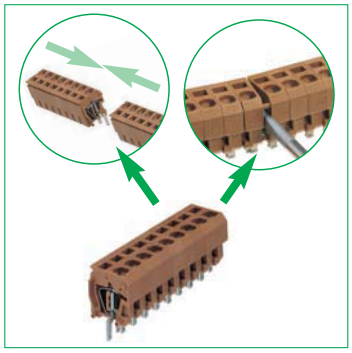
Features and advantages

ZINI | ZAKTO

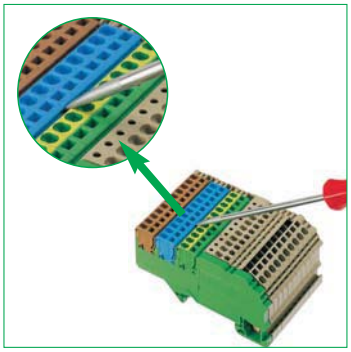
- Small size of connection mechanism
- PE connection is possible
- Concise labelling
- Connection of initiators and actuators
- A modular system for encoder and control signals
- 3- and 4-pole base terminals can be linked together to the required number of poles
- Potential distribution strips are colour-coded
- Compact design
- Available with or without status display
- The signal level can be cross-connected
- Potential distribution strip does not require additional cross-connection
- Quick assembly with top-down wire connection (TOP connection)
- Rated voltage of 400 V
- Available as individual terminal or assembled block terminal



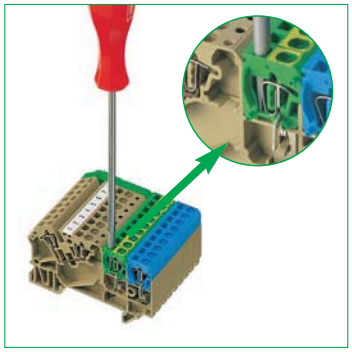
Pluggable cross-connection system **ZQI**, for the signal level, 2-10 poles (only **ZINI/ZAKTO**).



Potential distribution strip is simple to link and separate.



The **ZPL** potential distribution strip is easy to plug in or remove from the base terminal.



The TOP connection is easy to operate in cramped working conditions.

ZMP 1,5

- Small size of connection mechanism
- Potential distribution strips are colour-coded
- Compact design
- Quick assembly with top-down wire connection (TOP connection)
- Rated voltage of 400 V

Block variants ZIZA

The individual terminals of the block variants are connected underneath each other with pegs. This results in increased design stability compared with individual terminals. All CONTA-CLIP block variants can be snapped on using their two snap-on feet on both the left and right sides of the terminals – for a quick and easy attachment with only one grip required. Removing the blocks is just as quick – using the connected feet with the help of a screw-driver. The standard block variants are available with 8, 9, 16 and 17 poles, as well as customer-specific versions up to 32 poles. The advantage of the block variants over the individual terminals is not only their better mechanical stability. They also help you to reduce inventory and installation times and thus lower your costs!

Configuration options for the **ZMP** individual components						
ZINI/ZAKTO labelling adapter ZBA						
Additional labelling options	The **ZBA** labelling adapter is used to label the side-by-side ZPL potential distribution strips. The ZBA is also used to separate two different potentials within the ZPL slot on the base terminals.		In contrast to the ZBA 2, the **ZBA 2/Z** has pegs which form a mechanical (but electrically-separated) connection within a receiving channel!		The **ZBA 2/Z/H** features a larger labelling surface which also simplifies the task of separating the contact on the ZPL potential distribution strip from the base terminals!

CAUTION! Because of their construction, the following must be observed for ZINI/ZAKTO:

Procedure for using PE base terminals

If the open side of the **PE** base terminal faces the right, then this must be set as the “first”. If the open side of the **PE** base terminal faces the left, then this must be set on the end.

- The **PE**-potential distribution strip must (when needed) be inserted into the first position on the base terminal (directly adjacent to the signal level).
- When working with mixed assemblies (both 3- and 4-pole base terminals), the 3-pole terminal must be placed before the 4-pole terminal.

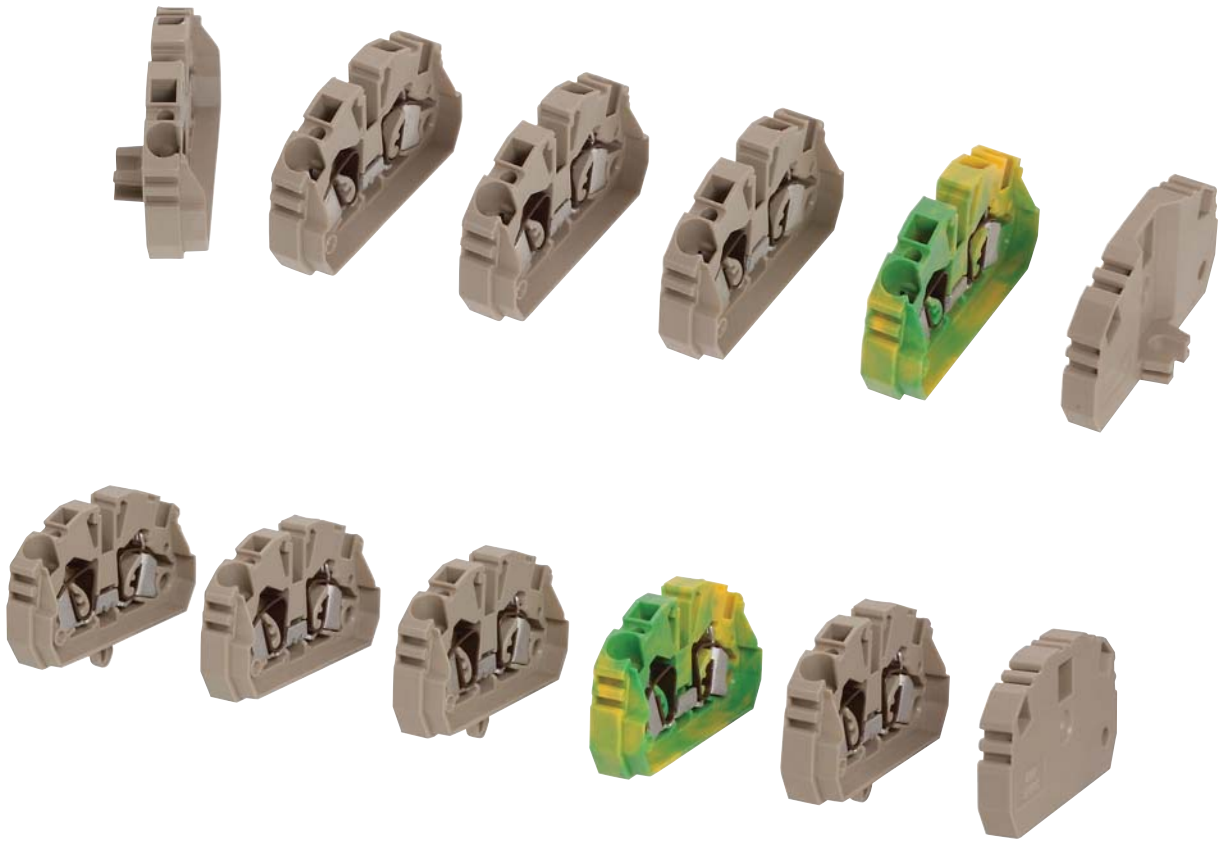
Compact terminal series for direct mounting ZSRK / ZSLN

The **ZSRK 2,5/2A/D/F** and **ZSRK 2,5/2A/RC** are direct-mount tension-spring terminals with interior cross-connection channels. The have a compact, modular design with a clamping range of 0.08 - 2.5 mm² and a rated voltage of 800 V. They allow you to mount a terminal block with the number of poles you need. This block can then be directly screwed on to the mounting plate (with the **ZSRK 2,5/2A/D/F**) or directly snapped on (with the **ZSRK 2,5/2A/RC**).

These direct-mount terminals can be used for series production and for installations in cramped working conditions.

Individual connection groupings or circuits can be visually separated from one other by the different housing colours. Potentials can be multiplied via the interior cross-connection channel with the **ZQI 2,5** standard cross-connections (available in 2 – 10 poles and 99 poles).

It is possible to label with the **SB** or **PMC** quick marking systems at each clamping point. If a cross-connection is not being used, that cross-connection channel can be used instead as a labelling channel. Clarity for wiring is ensured with a terminal width of only 5 mm and the tension-spring TOP connection.



Compact terminal series for direct mounting ZSRK | ZSLN

The features in detail

Direct-mount snap-in clip

The **ZSRK 2,5/2A/D/RC** terminal is attached to the start and end of the terminal block. The **ZSRK 2,5/2A/D** (corresponding to the number of poles required) is positioned between these two terminals. For terminals blocks with more than six poles, we recommend mounting a ZSRK **2,5/2A/D/RC** between the **ZSRK 2,5/2A/D**s. This ensures proper mechanical support.
The **ZAP-SR/RC** end plate is then snapped on to the end of this terminal block.

ZSRK 2,5 direct-mount with snap-in clip

Direct-mount screw flange

The **ZSRK 2,5/2A/D/F** terminal is mounted at the start of the terminal block and aligned with the **ZSRK 2,5/2A/D** terminals to the required number of poles. A **ZEH 1** end support is then snapped on to the end of this block. The starting terminal and the end support both have a screw flange so that the terminal block can be screwed directly on to the mounting surface using an M3 screw.

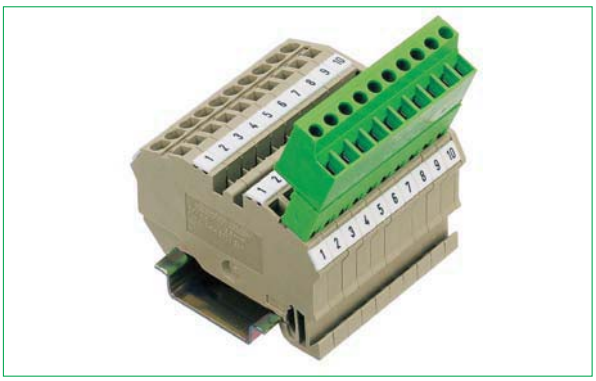
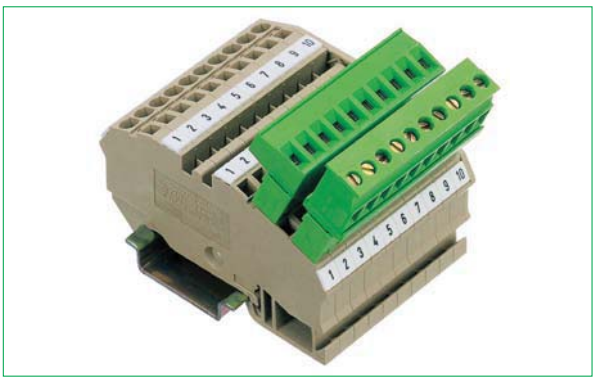
Plug adapter for the ZRK tension-spring connection system in 5.08-mm pitch

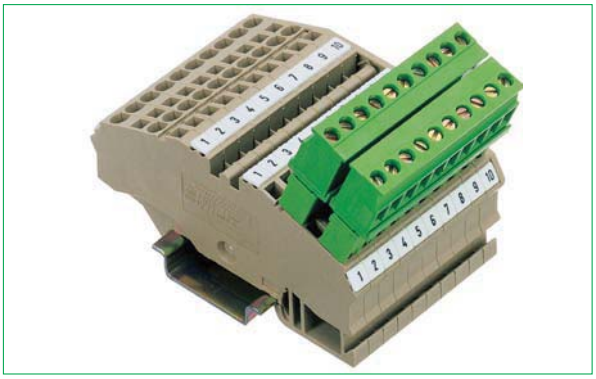
CONTA-CONNECT together with CONTA-CON



ZRK 2,5/2A combined with the STL 950/10/5,08-G-L

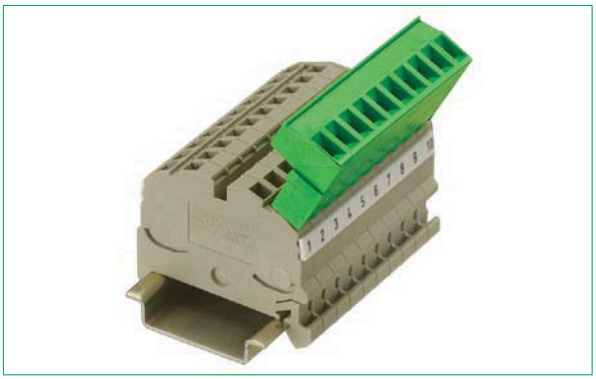


ZRK 2,5/3A combined with the STL 950/10/5,08-G-L



ZRK 2,5/4A combined with the STL 950/10/5,08-G-L

ZRKD 2,5 combined with the STL 950/10/5,08-G-L



ZSRK 2,5/2A with STL 950/10/5,08-G-L

ZSRK 2,5/3A with the BW 10 actuating tool

The standard **ZSRK 2,5**, **ZRK 2,5** and **ZRKD 2,5** tension-spring terminals from the **CONTA-CONNECT** line can be retroactively converted to pluggable versions by using the STL 950/.../5,08-V-G-L male pin headers.

It is quick and easy to connect each connection level with the pin header.

The BW actuating tool (available in 1 to 10 poles) can be used to open up to ten springs simultaneously. This simplifies and accelerates the installation process.

The combination of the **ZRK** tension-spring technology and the **CONTA-CON** PCB connectors results in a dramatic reduction in expensive final-assembly overhead. It also enables quick replacements during maintenance and commissioning work. Coding without pole loss is possible with all combinations. (Refer to the coding section of the **CONTA-CON** Catalogue.)

Note: With voltage up to 42 V, connectors may only be plugged in or disconnected when under no load. When assembling the output side of the tension-spring terminals with **STL 950/.../5,08-G-L** pin headers, the rated voltage must not exceed 50 V since the live-voltage pin headers offer no touch-safe protection when unplugged.

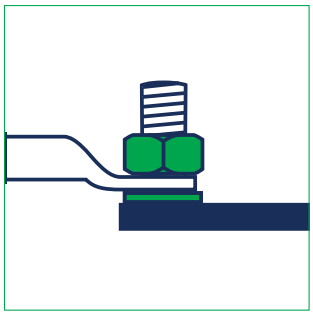
Stud connection system HSK



The newest generation of stud terminals from **CONTA-CLIP** offers secure connections for all energy-transmitting applications. Depending on the conductor cross-section, stud terminals can be used with threaded studs from **M5** to **M12**. The rated current ranges from 76 A to 269 A with a rated voltage of 1000 V. The wire connection range is from 0,2 mm² to 120 mm². Wires with crimped cable lugs are applied to threaded bolts and then connected securely by tightening the hex nut. Optimal security is guaranteed by the low voltage drop and by the use of self-extinguishing material with a V0 (UL94) flammability rating.

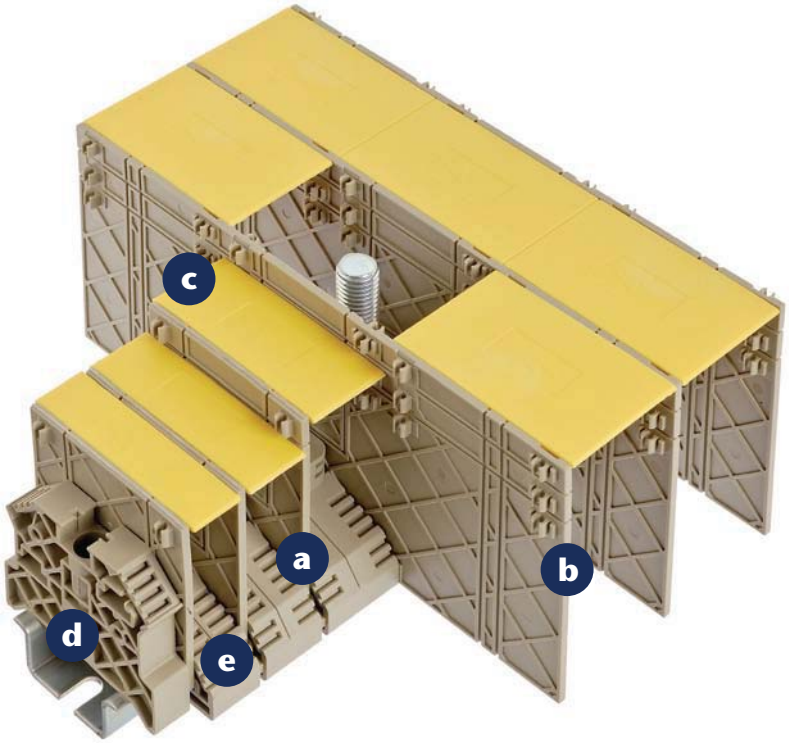
Designed for mounting onto **TS 35** DIN rails, the stud terminals can be adapted with accessories such as **TW** partitions and **AD** covers to suit application requirements. These products are easy to use. They also stand out with their cost-optimized line of accessories which results in reduced storage costs and assembly times.

Stud connection system HSK

Features

a **Base terminal HSK**
CONTA-CLIP stud terminals can be arranged as required on standard **TS 35** DIN rails in accordance with EN 60715.

b **Partition plates TW**
Special **TW** partitions can be securely snapped into the terminal housing. This allows for good visual and electrical separation of the terminals. In addition, they are ready for fitting with snap-on covers.



c **Covers AD**
The **AD** covers can be snapped on, simply and securely, to the matching clips in the partitions. In this quick and reliable way, touch-safe protection of the terminal points is always guaranteed.

d **End stop ES 35/K/ST**
The **ES 35/K/ST** end stop grips both sides of the DIN rail with steel clamps. They are a secure method of mechanical attachment in terminal rail design. The plastic PA 6.6 housing of the brackets encapsulates the metal parts.

Handling

1 Stud terminals:
Up to four wires can be connected easily. Cable lugs are crimped onto the wire ends to facilitate the connection. The cable lugs should be aligned opposite each other when there are multiple lugs per side. When the nut is tightened, the flats of the cable lugs clamp together and a secure connection is ensured.

2 Stud terminals:
Cable lugs are crimped onto the wire ends to facilitate the connection. The cable lugs are placed on the studs between the shake-proof washer and the busbar. The cable lugs should be aligned opposite each other when there are two lugs per stud. When the nut is tightened, the flats of the cable lugs clamp together and a secure connection is ensured.

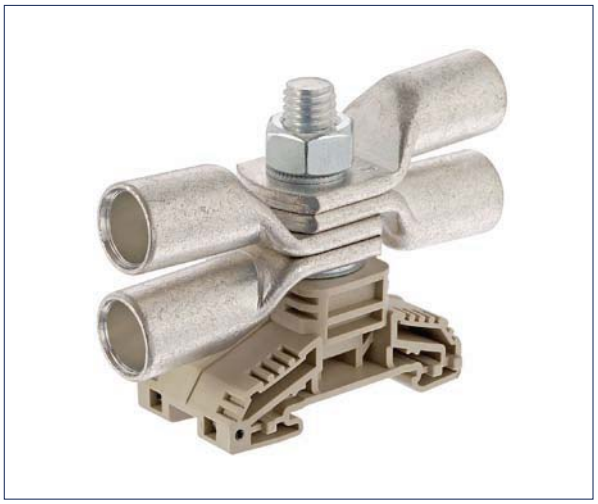
e **Labelling | Marking**
The stud terminals have a labelling surface which is optimally suited for our Pocket-Maxicard **PMC** (**PMC BSTR 6/30**) standard marking systems.

High-power stud terminals HSK

The features in detail

Stud connection

- Stud sizes from M5 to M12
- Wire with cable lug acc. to DIN 46234 up to 120 mm^2
- Up to four cable lugs per stud can be connected



Easy to use

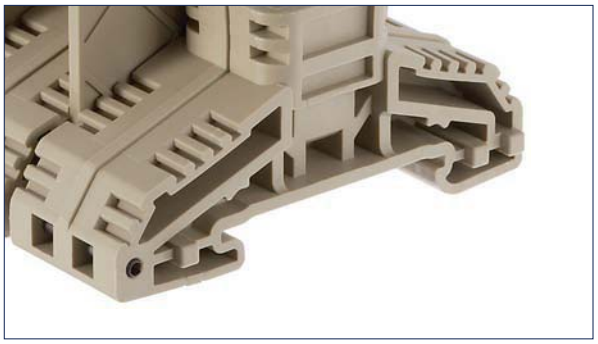
- One-stud terminals: Put the cable lug on the stud between the base washer and the shake-proof washer
- Twin-stud terminals: Put the cable lug on the stud between the busbar and the shake-proof washer
- By tightening the steel nut, the cable lug forms a contact with the other cable lug or with the busbar. (B/B versions)

Cross-connections

- 2- and 3-pole designs
- Potential distribution between the different sizes is possible Designed for the rated current of the corresponding stud terminal
- Clearly saves time with quick potential distribution

Terminal carriers made from Polyamide 6.6 V0

- Self-extinguishing, UL94-V0 flammability class
- Creepage-current protected, CTI = 600
- Temperature resistance: -40° to +120°C
- Spec. contact resistance: 10^{13} Ohm/cm
- Spec. surface resistance: 10^{15} Ohm/cm
- Temp. index, mechanical: 120°C (at 0.8 mm)
- Temp. index, electrical: 120°C (at 0.8 mm)
- Relative temperature index, electrical: 130°C (at 0.8 mm)
- Pollutant-free



Secure handling

- Touch-protection provided by partitions and yellow covers

Secure contacts

- Maintenance-free, later tightening of the nut is not needed
- High contact strength and vibration resistance from the safety/spring washer
- Direct contact of cable lugs, or contact via copper busbar

Standards

The following standard terminal block requirements are fulfilled:

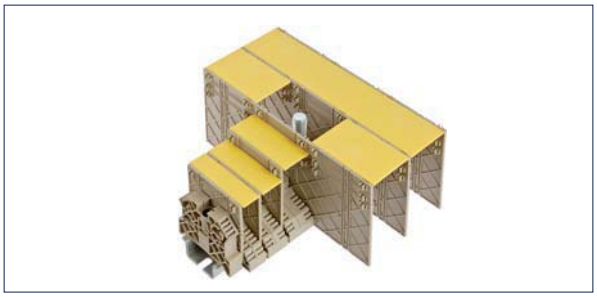
- EN 60947-7-1
- EN 50124-1
- DIN EN 61373

High-power stud terminals HSK

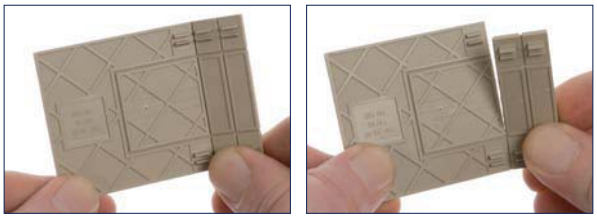
Handling and accessories

The use of TW partition plates

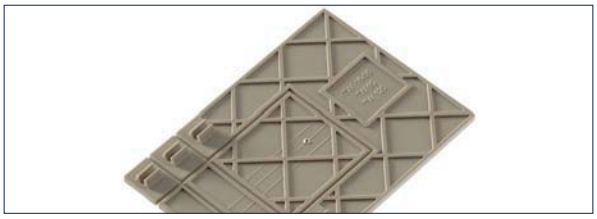
The **HSK...B** single-stud terminals and the **HSK...B/B** twin-stud versions make use of two **TW** partitions. The partitions can be adjusted to the rated cross-section by using the predetermined breakage points. For your further assistance, the **TW** partitions list the cross-section range and additional dimension lines. Remember that the clearance and creepage distances for a rated voltage of 1000 V, dependent on the corresponding cross-section, must be followed.



HSK installed with TW partition plate and AD cover



Simple breaking off of the TW partition



TW partition with dimension lines

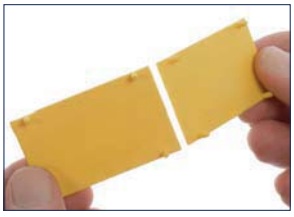
Snapping on the partition plates to the HSK high-power stud terminals

You can snap on the **TW** partition plates and the **HSK** stud terminals by using the locking pegs on the partition. The pegs lock into the foot of the stud terminals.

Snapping together the TW partition with a high-power HSK stud terminal

Using the AD covers

An individual **AD** cover is available for each width of stud terminal. Their length takes into consideration the creepage and clearance distances on the twin-stud terminals. If the covers are to be used with the one-stud versions, you can shorten the cover by breaking it along the breakage points. For your further assistance, the **AD** covers have additional dimension lines on them. Locking pegs are used to mount the **AD** cover. The cover snaps in securely from above to the **TW** partition plates. Thus a high degree of touch-safety is guaranteed.



Simple breakage with the AD cover

AD cover with dimension lines

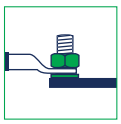
High-power stud terminals HSK B...B/B



The newest generation of **HSK B...B/B** stud terminals from **CONTA-CLIP** offers secure connections for all energy-transmitting applications. Depending on the wire cross-section, stud terminals can be used with threaded studs from M8 to M16. The rated current ranges from 192 to 415 amps, with a rated voltage up to 1000 volts. The wire connection range is from 6 mm^2 to 240 mm^2. Wires with crimped cable lugs are applied to threaded bolts and then connected securely by tightening the hex nut. Optimal security is guaranteed by the low voltage drop and by the use of self-extinguishing material with a V0 (UL94) flammability rating. Designed for mounting onto **TS 35** DIN rails, the stud terminals can be adapted with accessories such as **TW** partitions and **AD** covers to suit application requirements.

High-power stud terminals HSK B...B/B

Features

a **base terminal HSK**
CONTA-CLIP stud terminals can be arranged as required on standard **TS 35** DIN rails in accordance with EN 60715.

b **Partition plates TW**
To safely separate the potentials, **CONTA-CLIP** offers three different types of partitions in various heights fitting to each terminal. These are fitted securely in place between the individual terminals by means of the pegs integrated into the terminal base.

c **Covers AH**
The transparent **AH** covers offer a simple and safe method for protecting terminals and wires from accidental touch. They are securely screwed into the flanges built into the **TW** partition plates. The following product tables list the selection of **TW** partitions and the dimensions of the mounted terminal rails.

d **End stop ES 35/K/ST**
The **ES 35/K/ST** end stop grips both sides of the DIN rail with steel clamps. They are a secure method of mechanical attachment in terminal rail design.

e **Labelling | Marking**
The stud terminals have a labelling surface which is optimally suited for our Pocket-Maxicard **PMC** (**PMC BSTR 6/30**) standard marking systems.

High-power stud terminals HSK B... B/B

The features in detail

Stud connection

- Stud sizes from M 8 to M 16
- Wire with cable lug acc. to DIN 46234 up to 240 mm²
- Up to three cable lugs per stud can be connected with the single-bolt variants

Easy to use

- Place cable lugs on the studs
- Base washer and spring washer are then placed over
- When the steel nut is tightened, the flats of the cable lugs clamp together.

Cross-connections

- 2-pole design
- Can be used for all stud terminals
- Designed for the rated current of the stud terminal
- Clearly saves time with its quick potentials distribution

Housing made from polyamide 6.6 V0

- Self-extinguishing, UL94-V0 flamm. class
- Creepage-current protected, CTI = 600
- Temperature resistance: -40° to +120°C
- Spec. contact resistance: 10^{13} Ohm/cm
- Spec. surface resistance: 10^{15} Ohm/cm
- Temp. index, mechanical: 120°C (at 0.8 mm)
- Temp. index, electrical: 120°C (at 0.8 mm)
- Relative temperature index, electrical: 130°C (at 0.8 mm)
- Pollutant-free

Standards

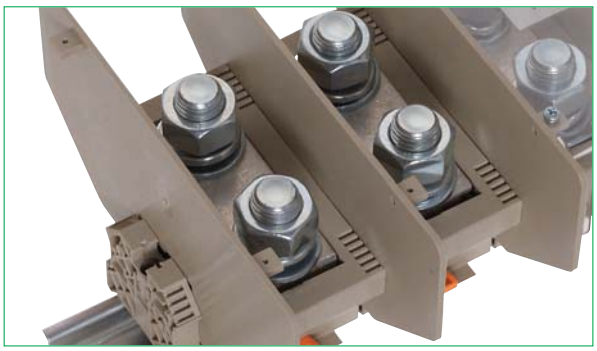
The following standard terminal block requirements are fulfilled:

- EN 60947-7-1
- EN 50124-1
- DIN EN 61373

Handling accessories

Secure handling

- Touch-safe protection because of **TW** partition plates and transparent **AH** covers



Secure contacts

- Maintenance-free, later tightening of the nut is not needed
- High contact strength and vibration resistance from the spring washer
- Direct contact of cable lugs, or contact via copper busbar

Cross-connections/Potential distribution

With neighbouring stud terminals, it is possible to implement potential distribution over two-pole **QS** cross-connection rails. The cross-connections are each designed for the rated current of the terminal. They are simply placed together with the cable lug over the stud. When using the cross-connection rails, do not use the partitions between the individual terminals. A cover over the terminals is not possible here.

Unlocking the DIN rails

The size of the terminal feet allows for a secure fit on a DIN rail with a thickness of at least 1.5 mm. A spring slider in the foot is used for a simple, quick snap-on and snap-off from the DIN rail.

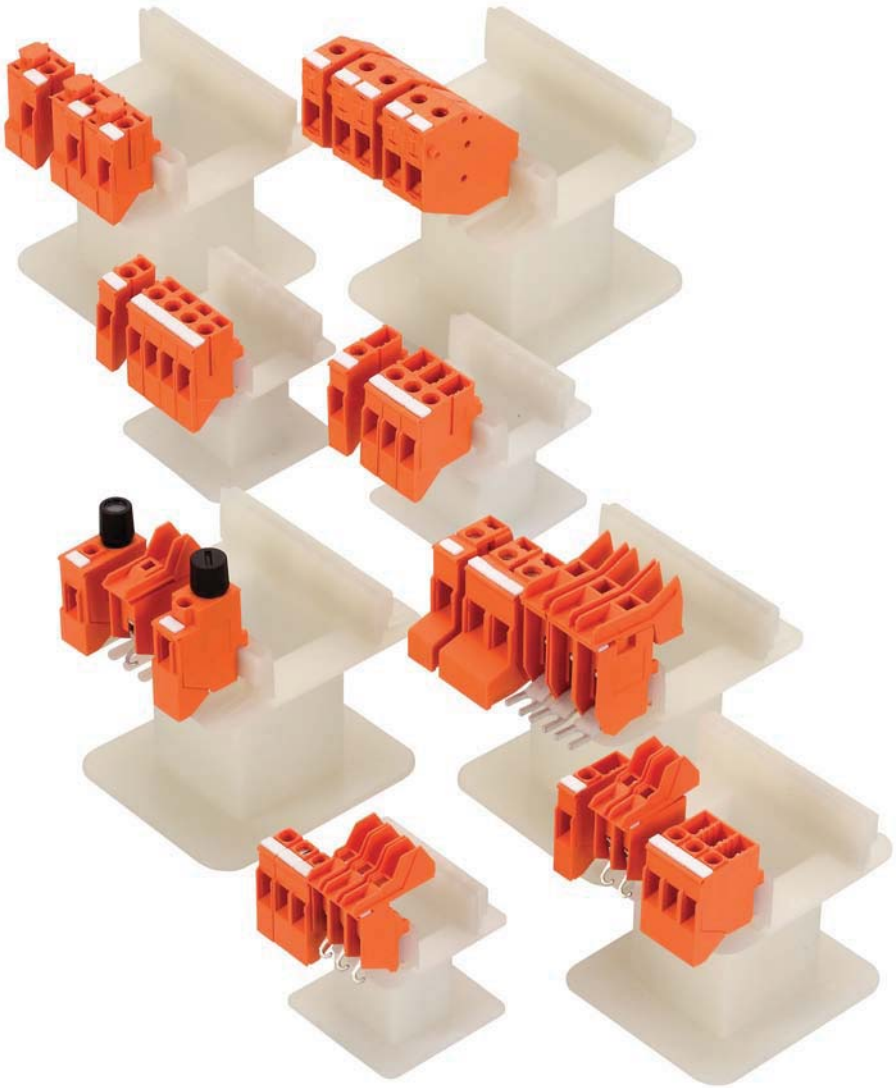
Transformer terminals TKS/TK

Transformer terminals are intended to be directly mounted to a core with integrated receptacles. They can also be mounted on aluminium 10x2 DIN rails. They are used for converting coil ends to screw-/spade connections, for connecting to the device being powered or to parts of the facility.

All transformer terminals feature the proven clamping yoke system which guarantees a vibration-resistant connection. Touch safety in compliance with **VBG 4** is ensured because of the closed housing design (material is polyamide PA 6.6 UL 94-V0). The **PMC SB 7,5** quick marking system is used for labelling the transformer terminals.

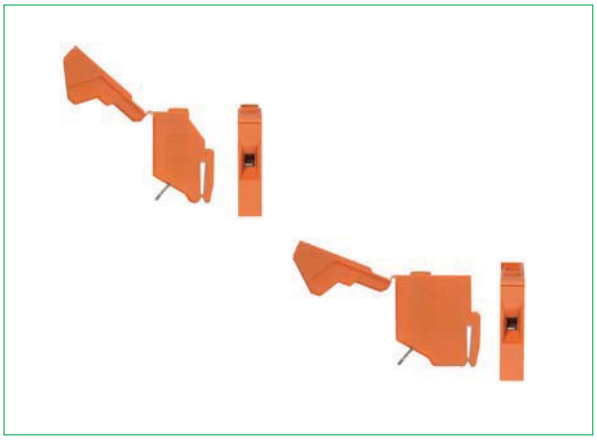


Transformer terminals TKS/TK

The features in detail

Transformer terminals: TKS 4 and TKS 4/F

The **TKS 4** and **TKS 4/F** are available as 1-, 2-, and 3-pole units as single, solid mouldings in the standard orange and grey colours. Customer-specific colours are available upon request. The **TKS 4** screw connection and the **TKS 4/F** screw-/spade connection (2.8/6.3 mm) are also available. The screw connection is designed for wires up to 4 mm². The solder hook is open-sided and the housing lid clips back in the open position above the screwdriver insertion point. These two factors allow the coil wires to be conveniently and quickly soldered.



Transformer terminals TKS 10

The **TKS 10**s are available as 1-, 2-, and 3-pole units in block versions in the standard colours orange and grey. Customer-specific colours are available upon request. The screw connection is designed for wires up to 10 mm². The solder hook is open-sided and the housing lid clips back in the open position above the screwdriver insertion point. These two factors allow the coil wires to be conveniently and quickly soldered.

Transformer-fused terminals TKS 4 SI 5x20, 5x25 and 6,3x32

The **TKS 4 SI** are available in 1-pole units in block versions in the standard colours orange and grey. The screw connection is designed for wires up to 4 mm². A screw cap is used to attach the corresponding 5x20, 5x25 or 6.3x32 micro-fuses in the **TKS 4 SI**.

Transformer terminals TK 4, TK 4/F, TK 10 and TK 4 SI

This modular system uses a dove-tail connection to assemble together into the required number of poles. The transformer terminals can also be delivered pre-assembled, in standard units from 2 to 10 poles and in orange or beige. Customer-specific colours are available upon request. The **TK 4** screw connection and the **TK 4/F** screw-/spade connection (2.8/6.3 mm) are available in colour versions.
The screw connection is designed for wires up to 4 mm².
The housing for the **TK 10** transformer terminals (2 mm²) and the **TK 4 SI** transformer fused terminals (2 mm²) are designed as single-pole terminals without a dove-tail connection. A screw cap is used to attach the corresponding 5x20 or 5x25 micro-fuses in the **TK 4 SI**.

Feed-through terminals RK | Fused terminals SIK/SK, in high-temp. design

The new feed-through and fused terminals, made from glass-fibre reinforced polyamide PA 6.6 V0, have an extended temperature range up to +140 C (RTI elec.) and open up new application possibilities in electrical engineering. These products offer an interesting alternative to terminals blocks made from thermo-set duroplast, and are suitable for nonrecurring high temperatures in the production process or for continuous nearby temperatures in machines and facilities. The feed-through terminals are available in the cross-section range 4 mm2 to 35 mm^2. They can be snapped on to a **TS 35** rail.

The **SIK10/Z** fused terminal is designed for holding 6.3x32 micro-fuses.
The **SK 1** fused terminals are available in various designs for 5x20 or 5x25 micro-fuses, with or without status displays.
The glass-fibre reinforced terminal housing offers a secure grip on the contact element in the case of power loss from fuse cartridges caused by surge current or short circuits. Due to the material used, these products are only available in black!

The features in detail

Terminal blocks RK 2,5-4, RK 6-10, RK 16, RK 35

From all available connection types, the majority of applications use the screw connection. The advantage of the screw connection is its suitability for all cross-sections and wire types. It can be used without any special adjustments for directly connecting the stripped wire end, or for stranded and finely-stranded flexible wires.
When using wire-end ferrules, these should always be crimped with the correct crimping tool before connecting to the terminal. Correct crimping guarantees an absolutely gas-tight, vibration-resistant connection.

Features
- Terminal housing can be snapped on TS 35 rail
- Terminal housings made of glass-fibre reinforced polyamide 6.6 V0 in black
- Temperature resistance to +140°C (RTI elec.)

Fused terminals SIK 10/Z

Fuse-disconnect terminal featuring extended disconnect lever with locked end position: for holding micro-fuses of size 6.3x32.

Features
- Terminal housing can be snapped on TS 35 rail
- Holds 6.3x32-mm fuses
- Two or three disconnect levers can be coupled and operated simultaneously by using the VBS connection sleeves
- Can be used with solid link as disconnect terminal
- Terminal housings made of glass-fibre reinforced polyamide 6.6 V0 in black
- Temperature resistance to +140°C (RTI elec.)

Fused terminals SK 1

Fused terminal with screw cap for holding micro-fuses in sizes 5x20 mm and 5x25 mm. Two base terminals are available for different voltage ranges with or without status displays, and optionally fitted with neon indicator, glow lamp or LED.

Features
- Terminal housing can be snapped on TS 35 rail
- Suitable for holding micro-fuses of sizes 5x20 and 5x25 mm
- Fuses are screwed into the fused terminal via the screw cap
- Status display for various voltage ranges with LED, neon indicator or glow lamp
- Terminal housings made of glass-fibre reinforced polyamide 6.6 V0 in black
- Temperature resistance to +140°C (RTI elec.)

Feed-through terminals RK | Fused terminals SIK/SK, in high-temp. design

Screw connection system

- Foot can be snapped on TS 35 DIN rail
- Housing made from Polyamide 6.6 V0, glass-fibre reinforced
- Temperature resistance to 140°C (RTI elec.)

Connection diagram

- SIK and SK: Suitable for holding micro-fuses of size 5 x 20 mm, 5 x 25 mm and 6.3 x 32 mm
- SIK and SK: Status display for various voltage ranges with LED, neon indicator or glow lamp

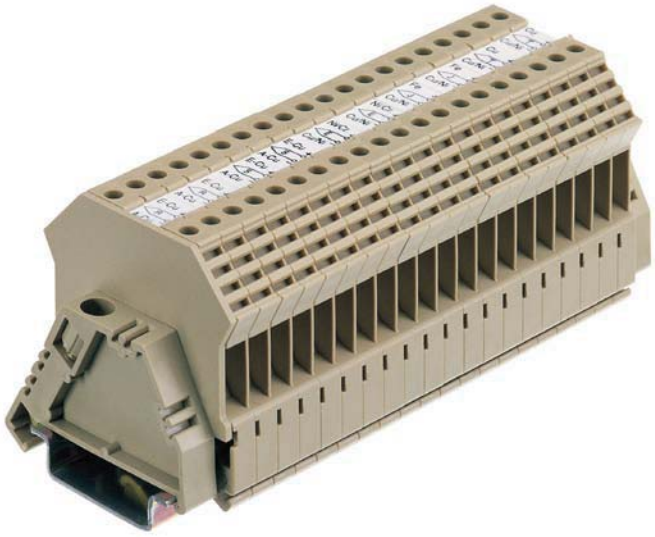
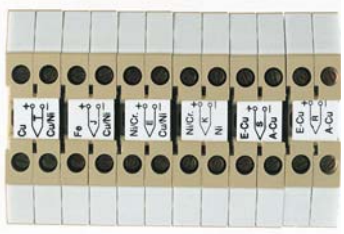
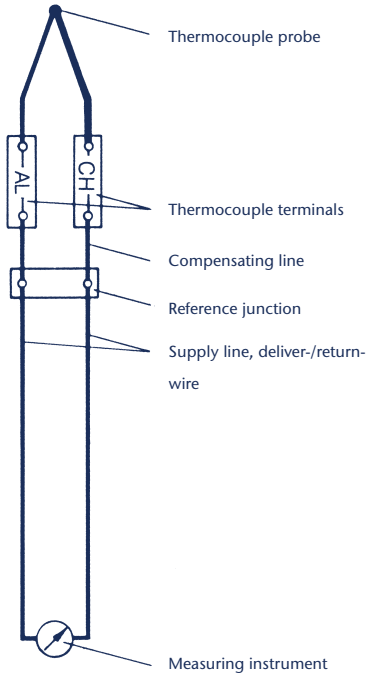
Thermocouple terminals TSK

The **TSK** series can be used to extend thermocouple measurement circuits without introducing errors caused by incompatible junction materials.



The **CONTA-CLIP TSK** terminals can be used to clearly label the thermal terminal pair in use. The busbars on the thermocouple terminals are made of the same materials as the compensating lines, in compliance with DIN 43713/DIN 43714. This ensures thermocouple signals are transmitted accurately on the junction between the thermocouple, thermocouple terminal and compensating line.
Thus the base value maintained in accordance with DIN/IEC 584.





Features of the TSK 2,5

- Two-pole blocks per thermal pair
- Thermal pair is clearly labelled on the terminal block
- Terminal width of a thermal pair is 10 mm
- Material of busbars corresponds to material of compensating lines.

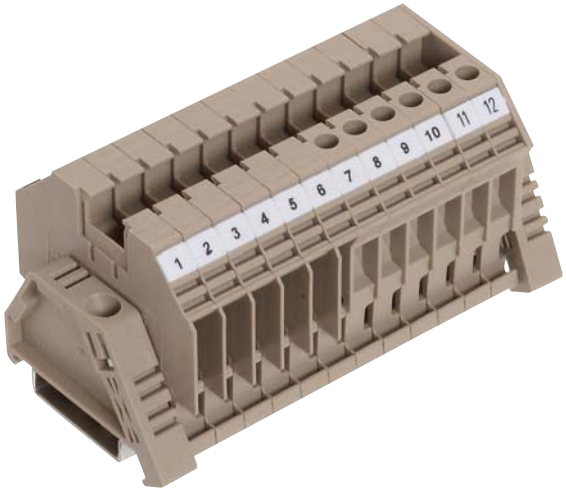
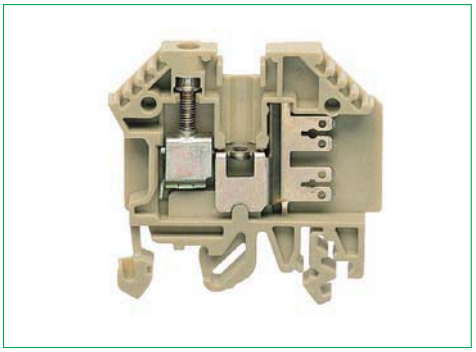
Terminal blocks with spade connection FF/SF

The spade connection is a widely standardized connection method. A spade ferrule corresponding to the cross-section is crimped on to the wire end. The spade ferrule then pushes onto the spade terminal so that the wire contacts the terminal. These terminals can be used for interfaces between electronics and electrical systems or for applications where assembled cables are being used.



The rated current of a spade connection depends on the materials and surface properties of the spade ferrule. The rating also depends on the cross-section of the crimped wire and the ambient temperature. The guidelines for permitted continuous currents are described in the DIN draft standard 46249-1. The specified rated voltages are then guaranteed only when the corresponding insulation sleeves are placed on the spade ferrules.



Features of the FF 2,5 and SF 2,5-4

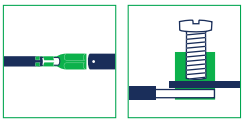
- Terminal width of only 6 mm
- Connects standard spade plugs of sizes 0.8 x 2.8 mm or 0.8 x 6.3 mm
- Can be easily adapted from spade to screw connection with SF 2,5-4
- Up to 4 spade plugs can be joined to a single potential in one terminal: FF 2,5
- Can be cross-connected using 2-, 3-, 4- or 10-pole cross-connectors

Features of the FF 1/15

- Terminal width of only 6 mm
- Connects standard spade plugs of sizes 0.8 x 2.8 mm
- Up to 4 spade plugs can be joined to a single potential in one terminal
- Can be cross-connected using 2-, 3-, 4- or 10-pole cross-connectors

Terminal blocks with spade connection FF/SF

Screw connection system



- Foot can be snapped on TS 15, TS 32 and TS 35 DIN rails
- Housing made from polyamide 6.6 UL 94-V2

Screw-distributor blocks SVB

The **SVB** screw-type distributor block makes it possible to distribute potential and power in a compact space without any additional accessories. You can use the distributor block to establish an electro-mechanical connection between a wire with a large cross-section and one or more wires with small cross-sections. They can be used in installation and distribution board construction and also in controller construction for machinery.

The SVB blocks are mounted by snapping them on to **TS 35** DIN rails. They can also be attached directly to a mounting plate using the screw flange located on the side of the housing.

Screw-distributor blocks SVB

Screw connection system

Features
- High short-circuit resistance rating
- IP20-class protection
- Simple handling
- Space-saving design

- Foot base can be snapped on TS 35 DIN rail or suitable for direct mounting
- Modular design (single- or three-phase block)
- Suitable for copper wires
- Housing made from polyamide 6.6 UL 94-V0

Cuttable terminal strips EKB

Screw connection system	EKB 1,5/...DS	EKB 1,5/...	EKB 2.5/...DS
			
				Cuttable terminal 1.5 mm² with wire protection	Cuttable terminal 1.5 mm² without wire protection	Cuttable terminal 2.5 mm² with wire protection

The EKB variants cover a rated cross-section range from 1.5 to 10 mm2. They are available from 1 to 12 poles. An attachment hole is located between each of the poles which guarantees proper mechanical alignment during installation. The terminal housing is made from high-quality polyamide (PA 6.6 UL 94-V2).

Features:

- Housing made from polyamide 6.6 UL 94-V2
- colour: transparent/black/white
- Terminal body: Nickel-plated brass
- Wire protection spring: Stainless spring steel

Cuttable terminal strips with foot EKBF

Screw connection system	EKBF 2.5/...DS	EKBF 2.5/...	EKBF 4/...DS
			
				Cuttable terminal 2.5 mm² with foot and wire protection	Cuttable terminal 2.5 mm² with base without wire protection	Cuttable terminal 4 mm² with foot and wire protection

The EKBF and EKBBS variants cover a rated cross-section range from 2.5 to 4.0 mm2. They are available from 1 to 12 poles. An attachment hole is located between each of the poles which guarantees proper mechanical alignment during installation.

EKBF: The housings have a base-foot that is raised 8 mm in order to increase the creepage distance between the overlay and the terminal body.
Thus these terminals can also be used in household electrical appliances and lamps without insulated bases (VDE 0700/0711).
Colour: transparent/white

Ceramic terminal blocks KKB

Ceramic terminal blocks KKB

Ceramic terminals are suited for applications that require extreme resistance to heat. In additional to heat resistance, these terminals are resistant to corrosion, fire-proof, and resistant to chemicals. They have a continuous-use temperature of up to 350°C. The variants specified have a total rated cross-section range from 2.5 to 10 mm² and are available with 2 or 3 poles. An attachment hole is located between each of the poles which guarantees proper mechanical alignment during installation.
The terminal housing is white and made from high-quality enamelled porcelain.

Features:
- Material: KER DIN 40685 porcelain, enamelled
- colour: white
- Terminal body: Nickel-plated brass
- Screw: Galvanized steel, passivated BU

Shield-connection clip SAB | SSAB

In the field of industrial process engineering, a high degree of interference immunity is required of electrical equipment. In the fields of measurement, regulation and control engineering, this is a significant contributor to the viability of industrial systems. When constructing low-interference systems, both the cable shielding and the associated shielded ground are of great significance. The point where the cable shielding connects to the housing ground is a critical point. The connection should be low-ohm, and should also feature minimal inductive resistance. You should be certain that this connection can be established in a practical, simple and quick manner. **CONTA-CLIP**'s **SAB/SSAB** clip accomplishes all this with the help of its outstanding feature set.

Shield-connection clip SAB | SSAB

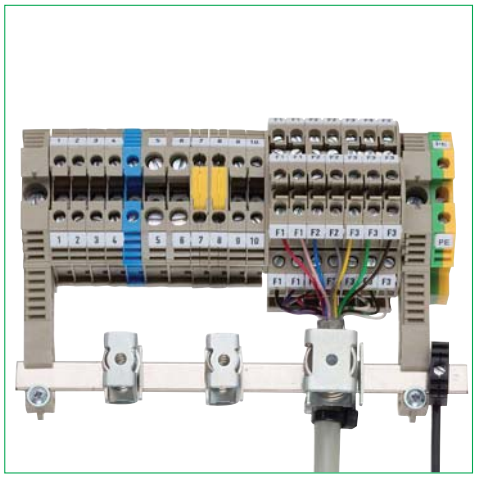
Overview of the variants

Busbar mounting with the SSAB

The **SSAB** can be mounted on a busbar. After wiring the terminal block, the shield-connection clip is mounted by simply swivelling in and tightening the knurled thumb screw. This makes the **SSAB** screw-shield-connection clip very convenient to wire. Depending on the length of the terminal blocks, two or more **SH/SAB** busbar supports are used. These mechanically connect the front busbar with the DIN rail (support). **SH1** busbar supports are used where a shield-connection system must be mounted directly onto a panel rather than a DIN rail. The 10 x 3 busbars can be easily and quickly snapped on to these supports. In both cases, the contact with the earth or ground potential can be established with a **ZB** clamping yoke.

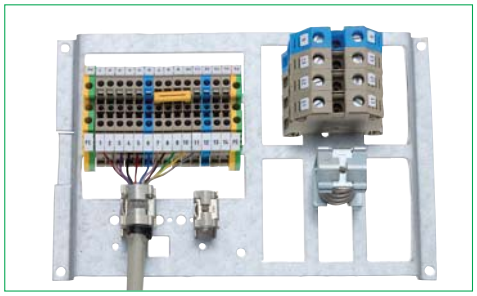
Busbar mounting with the SAB

The **SSAB** can be mounted on a busbar. After connecting the wiring, the shield-connection clip is mounted by simply swivelling in the **SAB** clip onto the busbar. The force on the cable comes from a spring-pressure piece. This regulated pressure ensures a constant optimal contact. This makes the **SAB** shield-connection clip very convenient to wire. Depending on the length of the terminal blocks, two or more **SH/SAB** busbar supports are used. These mechanically connect the front busbar with the DIN rail (support). **SH1** busbar supports are used where a shield-connection system must be mounted directly onto a panel rather than a DIN rail. The 10 x 3 busbars can be easily and quickly snapped on to these supports. In both cases, the contact with the earth or ground potential can be established with a **ZB** clamping yoke.



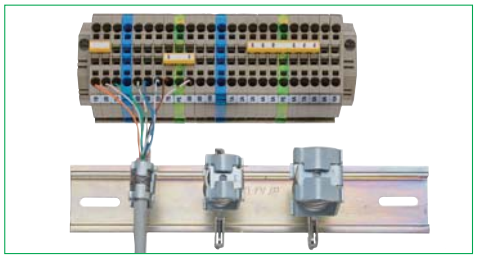
Direct mounting SAB.../D

The **SAB.../D** offers the possibility of direct installation. The force on the cable comes from a spring-pressure piece. This regulated pressure ensures a constant optimal contact. The **SAB.../D** can be installed with an **M4** screw (included in delivery) directly to the mounting plate. The **SAB 8/D** M5 shield-connection clip comes with a special feature; it is equipped with a self-cutting M5 SW3 metal screw. As a result, less time is required to mount the clip on the mounting plate, since you only need to drill one 4.2-mm hole through the plate. The hole threads will then be cut into the plate by the screw.



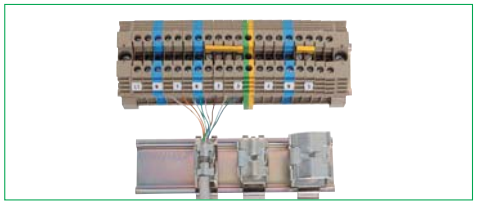
DIN rail installation SAB.../F

The **SAB../F** can be mounted on a DIN rail. The force on the cable comes from a spring-pressure piece. This regulated pressure ensures a constant optimal contact. The **SAB../F** can be mounted directly to the **TS 35** rail using a mounting screw with a clamping foot.



DIN rail installation SAB.../MF/35

The **SAB.../MF/35** can be installed on a DIN rail. The **SAB.../MF/35** is snapped on directly via the internal-spring **MF/35** foot without the need for tools. The force on the cable comes from a spring-pressure piece. This regulated pressure ensures a constant optimal contact with the DIN rail.



Shield-connection clip SSAB

Screw connection system	SSAB 5	SSAB 8	SSAB 14

- Screw-on clip for simple retrofitting
- Knurled thumb screw, so no tools required
- Simple handling

The **SSAB** screw-shield-connection clip is suitable for standard cable shielding. It enables EMC-compliant wiring with its large surface area. It also has low-impedance and low-ohm contact junctions. It is ideal for wires with diameters ranging from 2 to 35 mm. The contacts can be established without the need for any special tool.

Busbars and clamping yokes

The **ZB** clamping yoke can be used in conjunction with the busbars in order to bring the neutral conductor or PE conductor together centrally. In order to help customize the facility wiring, the clamping yoke can be pushed onto the busbar. The **SH** and **ES** busbar supports are used for attachment. With longer rails, these can be positioned between the clamping yokes. The clamping yoke as a PE connection is available with green/yellow insulation caps. These caps signal the PE function together with the labelling tags and enable the PE wires to be clearly assigned. If you are using the clamping yoke to connection neutral conductors, then it can be marked with a blue insulation cap.

Ex terminal blocks ATEX

In regards to the use of terminal blocks and PE terminals in explosive-risk zones, the standard regulations (EN 60947-7-1 and EN 60947-7-2) apply, as do the following additional regulations:

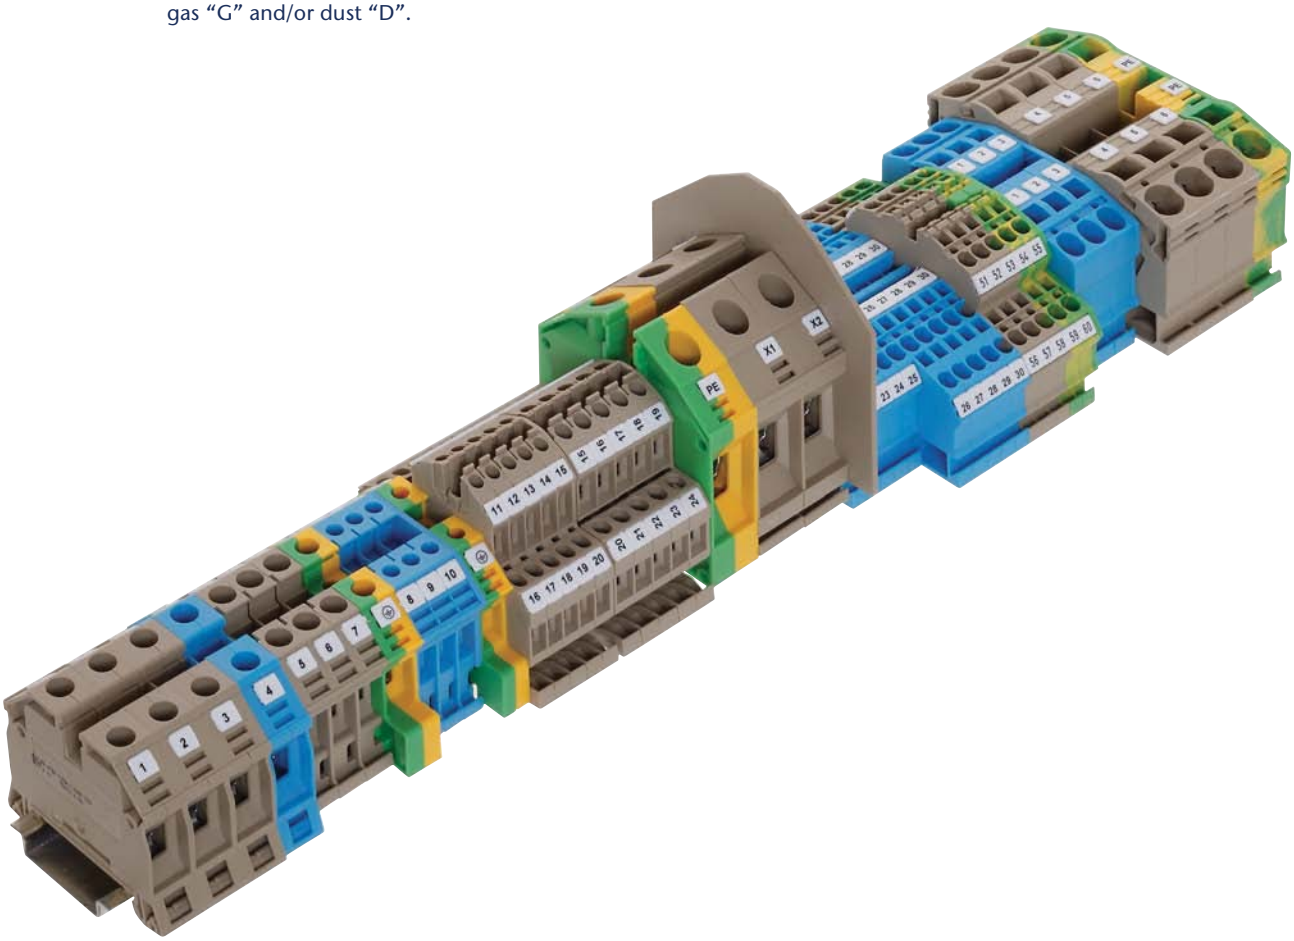
EN 60 079-0 and for increased safety “e” EN 60 079-7

Increased safety
Ex terminal blocks are designated as Ex components according to EN 50 014. A component is so designated when it is required to support the safe operations of devices and protective systems but does not itself function autonomously. In compliance with the European Ex Directive Ex-RL 94/9/EG, components are not labelled with the CE mark.

Ex terminal blocks are certified for the “Increased safety Ex e” ignition protection category.

Class II (gas, fumes, fog) device category 2 / Zone 1 or 2, approved for applications in gas “G” and/or dust “D”.

By means of the EC-standard examination certificate, compliance with EN 50 014/50 019 and the Ex- Protective Directive 94/9/EG is certified by the designated European bodies RL 94/9/EG (Nemko, TÜV Rheinland Group and Kema certifying bodies).
A prerequisite is certification of the manufacturer’s quality management system in compliance with DIN ISO 9001, with an additional audit according to 94/9/EC.
CONTA-CLIP is audited by the German Association for Certification of Management Systems (DQS GmbH) for DIN ISO 9001.
CONTA-CLIP has been ATEX-certified by the TÜV Rheinland Group with an intermediate audit.



Ex terminal blocks ATEX

Ignition protection category Ex i

No special approval is needed when using the terminal blocks for the intrinsically safe ignition protection category. Ex e- as well as standard terminal blocks can be used here when observing the gaps, creepage and clearance distances in accordance with IEC/EN 600079-11. Blue terminal blocks should be selected so that they are easily and clearly identified.

Ignition protection category Ex e

In observance of the corresponding installation guidelines, the terminal blocks listed on the following pages fulfil the requirements for the “Increased safety” Ex e protection category. As such, they are approved for use in Zone 1 and 2.

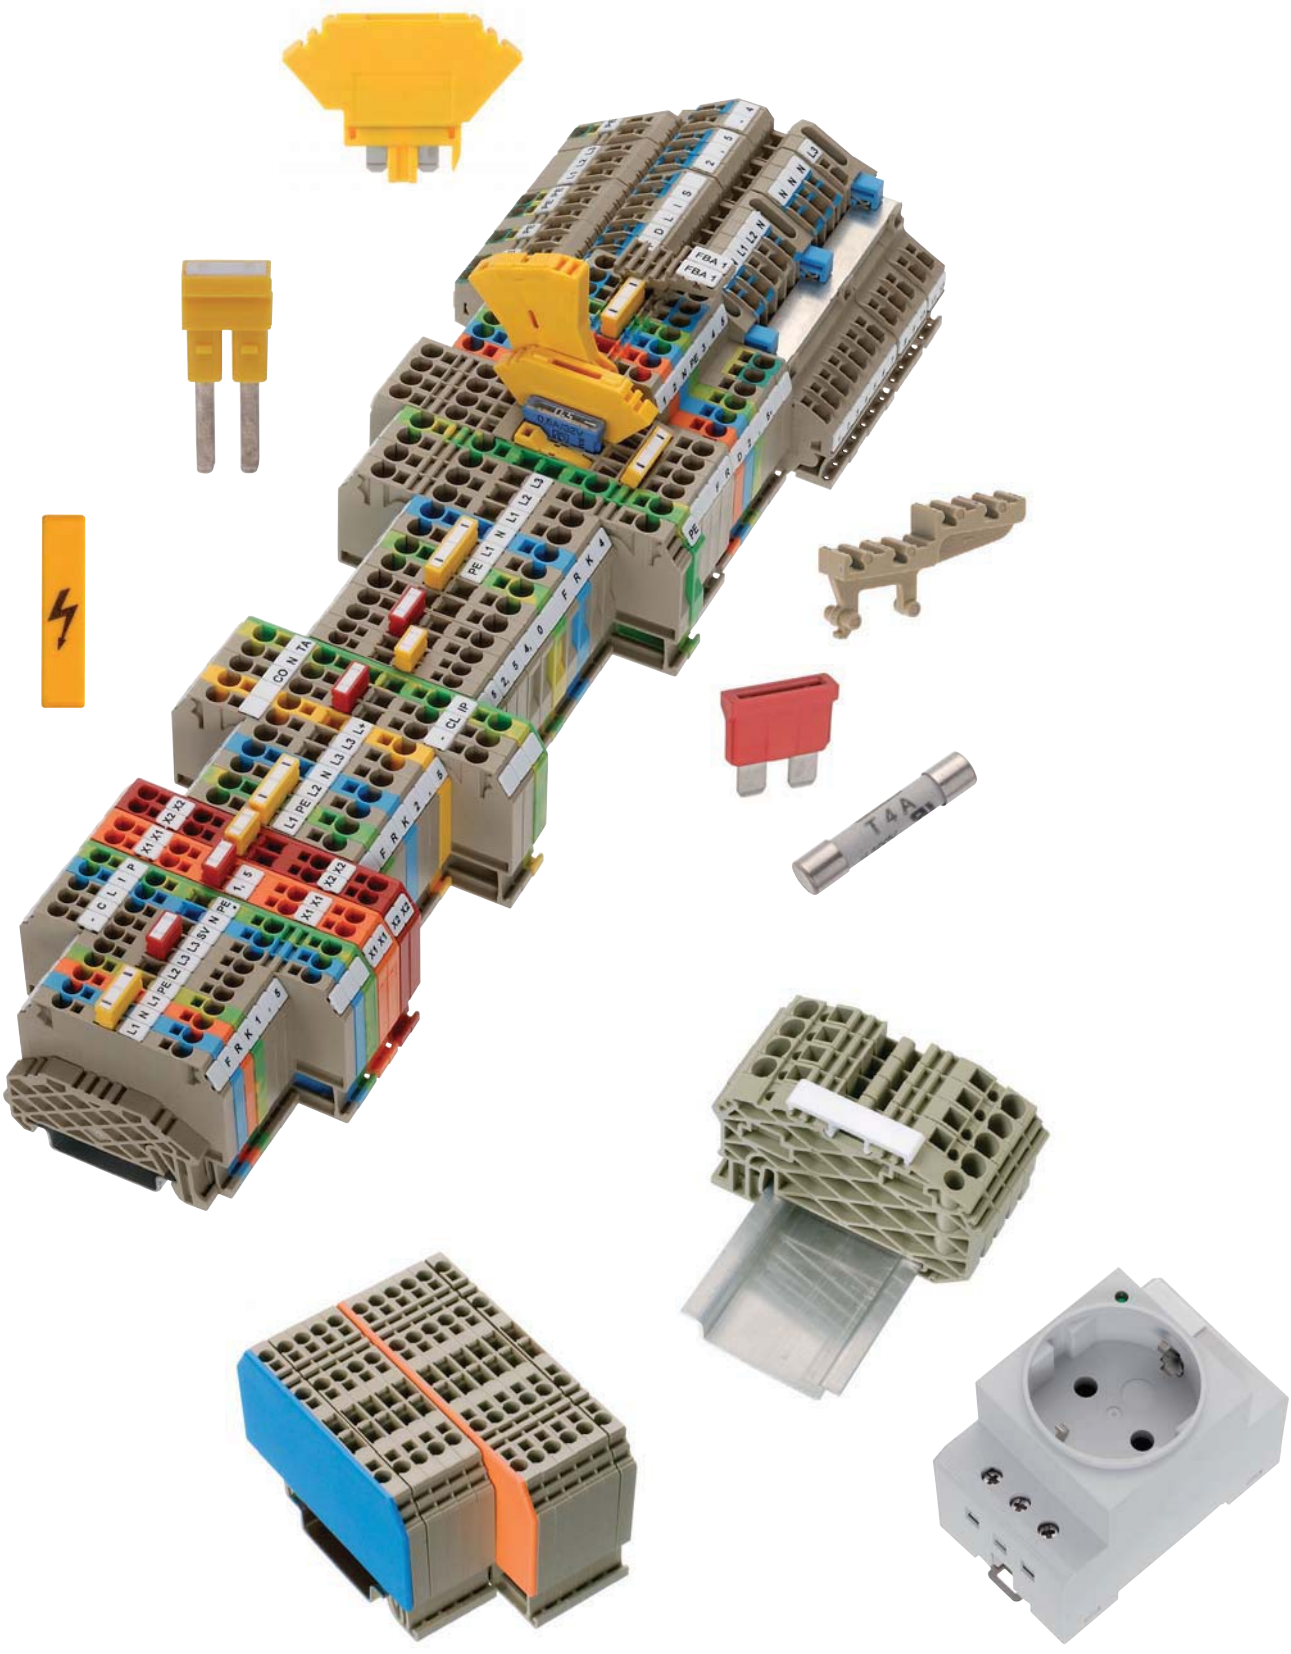
General accessories for CONTA-CONNECT

The **CONTA-CLIP** line of accessories is conceived and designed with the customer in mind. Our accessories allow you to move forward on a great number of technical applications with a minimum of effort and parts.



General accessories for CONTA-CONNECT

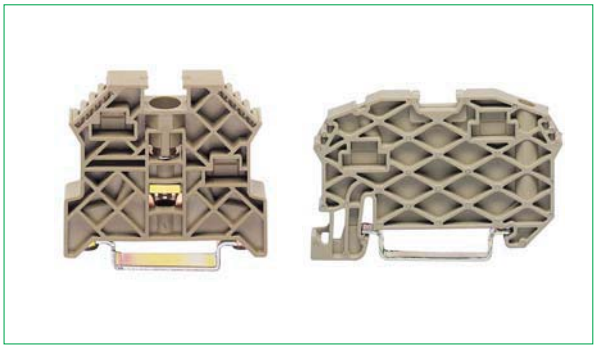
Overview

DIN rails

A wide variety of DIN rails are available, in two-meter sections or pre-cut as required. They vary in shape, size and material. They fit on various rail types ((C profile TS 32, Automatic profile TS 35, compact rail TS 15), are made from steel, copper or PVC, and are available in slotted or unslotted versions.

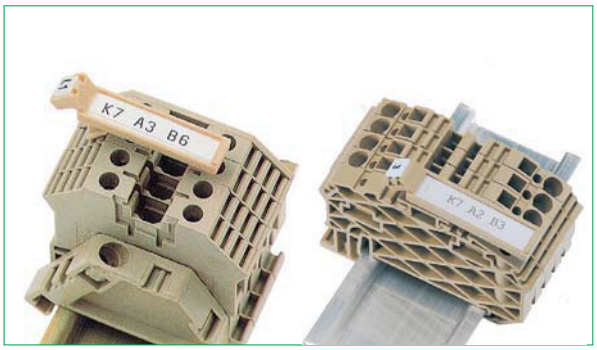
End stops | End supports

End stops are necessary for preventing movement of components along the rail. They are put in at the beginning and at the end of the rail assembly. Depending on the DIN rail, they differ in the dimensions of the mounting foot and their screw-on or snap-on design. End stops can also be used to hold a variety of group marker holders. An end support with screw flange or snap-in clip ensures that the terminal block is securely attached to the mounting plates.



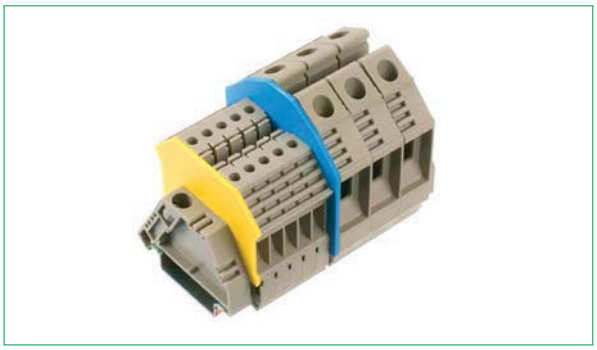
Group marker holders

Group marker holders allow you to clearly label terminal strip configurations. They are available in a variety of versions. Adhesive labels, paper strips or standard terminal markers are used for the labelling.



End plates | Visual separation

End plates are normally attached to the end or to the transition from a larger to a smaller terminal block. They ensure that there is enough insulation (touch protection) for the current-carrying section.



General accessories for CONTA-CONNECT

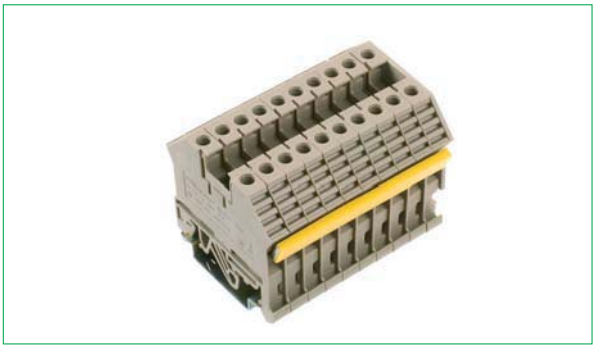
Overview

Cross-connectors

Cross-connectors save you time when distributing similar potentials or signals in a large number of electrical connections. They are either pluggable or screwable and are available with from 2 to 99 poles. The terminal block design and the variability of the cross-connector ensure excellent flexibility.

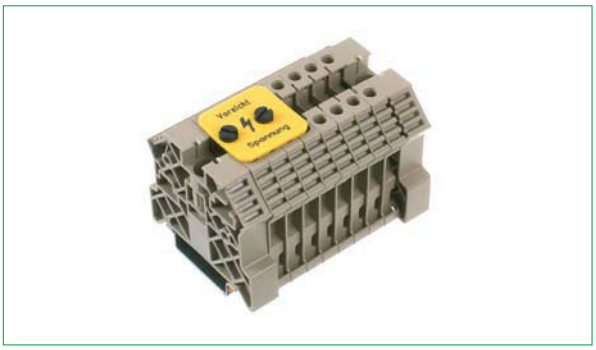
External cross-connector

External cross-connection bridges make it possible to branch off the current for terminal blocks which do not have a cross-connection channel or when an additional potential needs to be cross-connected. The attachment is at the clamping point of the terminal. As a result, the rated cross-section of the terminal block must be reduced to the next smallest wire cross-section.



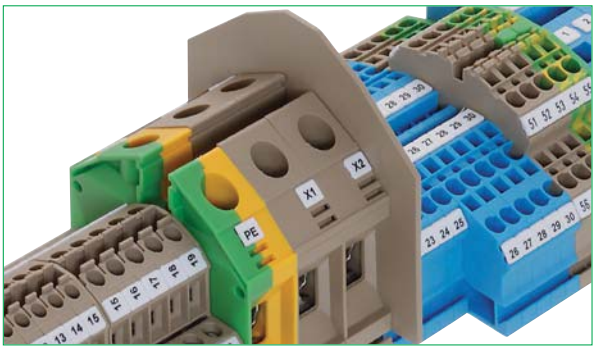
Covers

VDE regulations require that the mains connection terminals are mounted before the main switch be covered. The yellow covers (labelled with a lightning flash) are used to cover the cross-connection and operational channels. Thus they discourage operation of the terminal while live voltage is present.



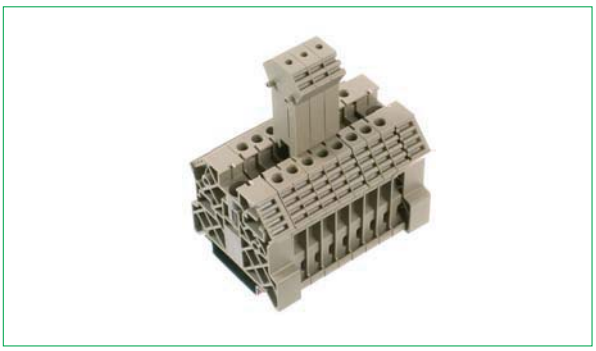
Partition plates

Partition plates are attached within a terminal strip assembly so that there is a clear visual separation of the different voltage levels. When used, they also serve to extend the creepage and clearance distances (increased rated voltage).



Testing and inspecting

A direct measurement can be carried out at the busbar on the screw-connection terminal by using a **PS** test plug and attaching a socket plug. The test adapters can be assembled to any pole counts using the locking pegs. They can be used to test assembled terminal blocks in a quick and safe manner.



General accessories for CONTA-CONNECT

Overview

Reducing sleeves

The **ZRH** tension-spring reducing sleeves allow you to securely attach a small wire in a terminal point without splaying off the individual strands.

Fuse holders

The plug-in fuse holders are available as models with or without a status display. When used together with the base terminals, they provide excellent flexibility, ease of use, and a large variety in the 5x20 mm micro-fuse range.

Fuse cartridges

G fuses are available in the 5 x 20 mm and 6.3 x 32 mm sizes, and in the “slow-acting” and “fast” versions. They are used with the **STK/SIK/SK/ZTRK** fused terminals and fuse-disconnect terminals. Additional auto-fuses, in compliance with DIN 72581, are available for fused terminal blocks in pressure-spring and tension-spring connection systems.

Specific accessories, test-disconnect terminals PTK

In addition to the standard accessories, the test-disconnect terminal product line includes many special articles. Internal and external cross-switch bridges, socket plugs and short-circuit plugs, for example, are required for constructing a secure terminal strip unit for measurement circuit applications.

Actuating tools

The fully-insulated **BW 1** to **BW 10** tools and the **BWMA** metallic tools can be used to actuate the pressure springs and tension springs in terminal blocks with cross-sections of 2.5 mm².

TS DIN rails

DIN rails TS 32 / TS 35

The design of the **TS** DIN rail complies with the European norm DIN EN 60715. The steel DIN rail is galvanized and has a coating of blue chromate that is at least 10 µm thick. We place extra importance on maintaining a high degree of dimensional accuracy. The steel DIN rails can be used as protective-earth busbars (with PE function) in compliance with DIN VDE 0611 part 3. Please note the following when using the rail as a PEN busbar:

- Only one E-Cu rail should be used.
- The short-circuit currents and the rated thermal currents must be observed.

The DIN rails are delivered in standard lengths of 2 meters. All DIN rails are also available in prepared (cut to length) versions, but all types are available pre-cut to customers requirements.

Marker holders for terminal blocks and end stops

Marker holders for terminal blocks and end stops

These marker holders provide a solution for marking a group of terminals or devices on the DIN rail.

The marker holders are available for attaching to terminal blocks and end stops.
The GT1 and GT2 group marker holders can be attached directly to the DIN rail. Depending on the type, they can be be marked with SB and AS terminal markers.
Custom marking is possible with BS-1 pen or EMS-2 plotter.

End plates | Visual separation

Screw connection system

The AP end plates are normally used at the end of a row of terminals. If different terminals are being used within the same terminal block, then you should insert end plates in order to ensure that the touch-safe protection is maintained. The outer dimensions of the end plates match the dimensions of the terminals.

Coloured end plates are used quite often in order to establish a clear visual separation between the different circuits or voltage levels. In addition, the use of end plates increases the clearance and creepage distances, which in turn influence the voltage ratings.

The locking pegs ensure that the end plates can be mounted quickly.

Because of the special design of the **RK** series, an end plate does not need to be used to separate neighbouring **QI** cross-connectors of different potentials.

End plates | Visual separation

Pressure-spring connection system

The **FAP** end plates are normally used at the end of a row of terminals. If different terminals are being used within the same terminal block, then you should insert end plates in order to ensure that the touch-safe protection is maintained.
The outer dimensions of the end plates match the dimensions of the terminal blocks.

Coloured end plates are often used to establish a clear visual separation between the different circuits or voltage levels.
In addition, the use of end plates increases the clearance and creepage distances, which in turn influence the voltage ratings.

The locking pegs ensure that the end plates can be mounted quickly.

Because of the special design of the **FRK** series, an end plate does not need to be used to separate neighbouring cross-connectors of different potentials.

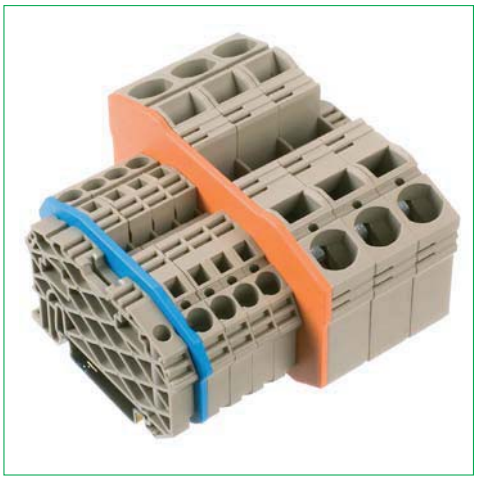
End plates | Visual separation

Tension-spring connection system

The **ZAP** end plates are normally used at the end of a row of terminals. End plates must also be used within a terminal strip when it makes use of terminal blocks of different sizes in order to ensure touch-safe finger protection. The outer dimensions of the end plates match the dimensions of the terminal blocks.

Coloured end plates are used quite often in order to establish a clear visual separation between the different circuits or voltage levels. In addition, the use of end plates increases the clearance and creepage distances, which in turn influence the voltage ratings. The locking pegs ensure that the end plates can be mounted quickly.

Because of the special design of the **ZRK** series, an end plate does not need to be used to separate neighbouring cross-connectors of different potentials.



End plates for direct-mount terminal blocks with snap-in clip ZSRK/ZSLN (RC)

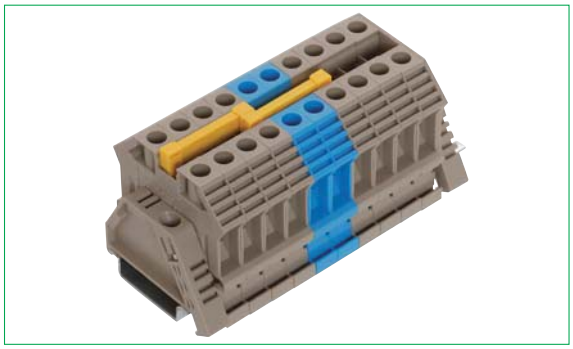
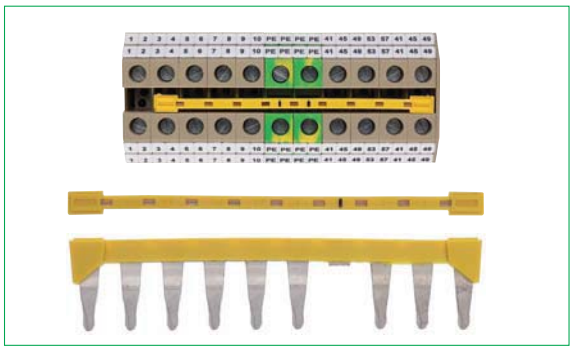
Insulated cross-connections SQI (potential distribution)

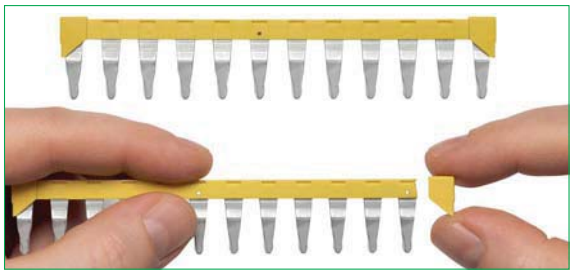
The **SQI** pluggable cross-connection system allows you to save time and money by distributing voltage potentials across terminal blocks of similar or different cross-section ranges. The pluggable design of the **SQI** offers the advantage that it can carry the rated current even while operating at the rated voltage! The **SQI** is constructed to protect against accidental touch. It is available in 2 – 10 poles and in 30 pole versions. Since the standard terminal blocks feature two cross-connection channels, it is possible to connect different voltage potentials in parallel with no loss of poles.



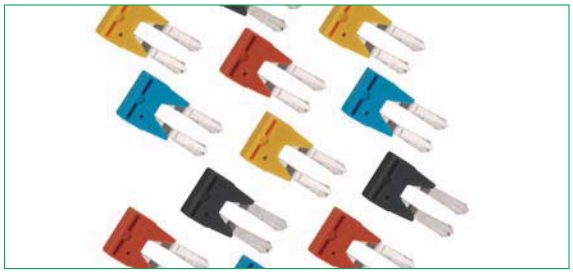
Individual cross-connection contact elements can be taken out of the row in order to skip over feed-through terminals (**SRK**) or PE terminals (**SSL**). This allows two different voltage potentials to be conducted using a single terminal rail configuration. You can mark these broken-off contact elements using the plastic insulation of the cross-connector.



It is possible to shorten the **SQI** cross-connection with a cutting tool. The **SQI** system allows you to maintain touch-protection safety by covering the cut (uninsulated) end with a **SQIK** insulation cap.



In order to help distinguish between different potentials, other colour variants are available for the **SQI 2,5**, **SQI 4**, **SQI 6** and **SQI 10** cross-connectors.



Insulated cross-connections SQI (potential distribution)

The 30-pole cross-connector features a numbered scale which allows the user to easily count off or shorten to the number of required poles.

Insulated cross-connections SQI

The **SQI** cross-connections for the screw connection system have a pluggable, insulated design. They can be used to conduct the rated current of the corresponding cross-section range. The terminal block design and the variability of the cross-connector ensure excellent flexibility.

Uninsulated cross-connections Q | Insulated cross-connections QI (potential distribution)

The **Q/QI** screwable cross-connection system allows you to save time while distributing potentials between terminal blocks of the same cross-section range. The **QI** has a touch-safe design and, like the **Q** cross-connection system, is available with 2, 3, 4 or 10 poles. Parallel connections between various potentials, without loss of poles, is possible with the **QI** system in cross-sections ranging from 2.5 mm² to 10 mm².

Skip-over bridging

With the standard terminal blocks, it is possible to skip over terminal blocks by breaking out (**QI**) or unscrewing (**Q**) individual contact poles.

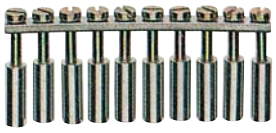
Shortening cross-connections

It is possible to shorten the cross-connections with a cutting tool, but you must then make sure that the cut side is fitted with an end plate so that the voltage rating is maintained.

Q/QI pre-assembled cross-connectors

The pre-assembled cross-connectors feature a cross-connection rail, connecting sleeve and attachment screw already assembled in the appropriate number of poles so that they cannot be lost. During installation, these pre-assembled cross-connectors need only be inserted into the appropriate terminal row. The cross-connection units are available in versions with 2, 3, 4 or 10 poles. Depending on the type of terminal block, we offer either insulated **QI** cross-connectors and/or uninsulated **Q** cross-connectors.

Q

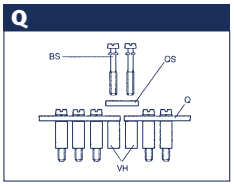


QI

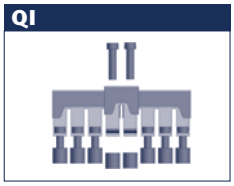
Cross-connecting (with Q/QI) one potential over more than ten terminal blocks.

From the cross-connection, the first or last screw is unscrewed from the **VH**. The **QS 2** or **QI 2** without **VH** is put in and then both screws are screwed back in to the **VH**.

Q



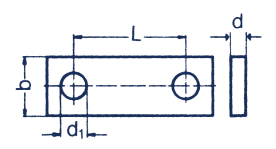
QI



Individual components of cross-connection Q (QS + VH + BS = Q) QS cross-connection rails

Cross-connection rails can be used in order to cross-connect identical potentials across multiple terminal blocks. The cross-connection rails are made of copper or brass. They have a galvanized nickel-plated surface. These cross-connection rails are delivered in 2-pole, 3-pole, 4-pole and 10-pole lengths – corresponding to the width of the terminal. The cross-connection rail is connected electrically using a connecting sleeve with the busbar in the terminal block. We offer cross-connection rails in 0.5 m length to fit with certain terminal blocks. This allows you to put together cross-connections for any number of poles.

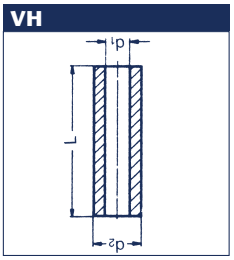
QS



VH connecting sleeves

The **VH**s have a customized length based on the corresponding terminal. They are made from copper or brass. They have a nickel-plated surface. A **VH** must be used for each terminal that is being cross-connected.

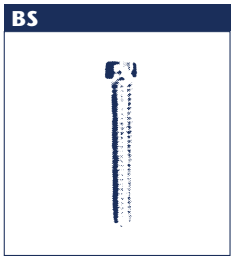
VH



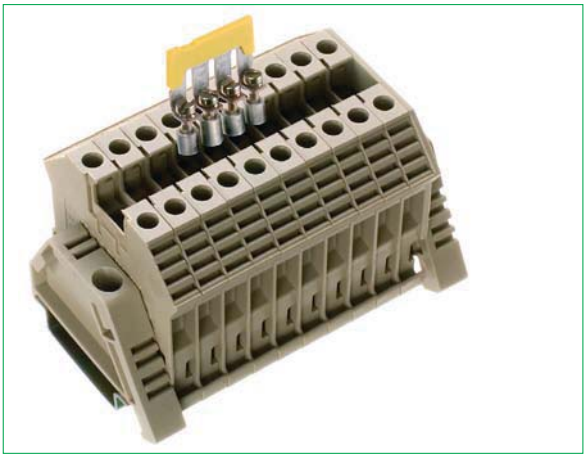
BS mounting screws

A steel screw is used to attach the cross-connection rail with the sleeve (**VH**) to the busbar on the terminal block. The steel screw ensures that the cross-connection unit has a strong mechanical connection to the busbar.

BS



Usage of the QI



Examples

Variability of the screwable cross-connector

Pre-assembled cross-connection units – in 2, 3, 4, 10, or 40-pole versions – significantly reduce the assembly time. There are additional advantages with the **QI** insulated cross-connections when using terminal blocks up to 10 mm². Because of its angled design, two **QI**s can be assembled offset (staggered). Thus it is possible to achieve the parallel guiding of two potentials. Since the **QI** is insulated and touch-safe according to VDE 0106 section 100, it is not necessary to use end plates or partitions between neighbouring cross-connection up to 400 V. The **QI** cross-connections can carry the rated current of the terminal blocks. It is also possible to skip terminals, since the individual contact ridges can be broken off.

Switchable cross-connections are meant for 2-pole cross-connections that are easily separated. A **VH**-type connecting sleeve and a **BS**-type screw are used for installation.

External insulated cross-connection AQI

External cross-connector AQI	AQI.../5/11	AQI.../5/15	AQI.../6/11
External cross-connection bridges make it possible to branch off the current for terminals, which are not available in the middle of the terminal, via a cross-connection channel. When external cross-connections are used, the rated cross-section is reduced to the next smallest wire size.

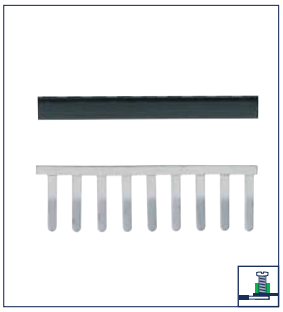
Uninsulated external cross-connection AQ | Bridgeable PEN power feed blocks

External cross-connection AQ

External cross-connection make it possible to branch off the current for terminals which are not available in the middle of the terminal via a cross-connection channel. The **AQ 58** type is delivered as a 58-pole version. Its contact elements can easily be broken out by hand. The attachable insulation section IP is available for the **AQ 58**. When external cross-connections are used, the rated cross-section is reduced to the next smallest wire size.

AQ



Bridgeable PEN power feed blocks

When five-wire power supplies are connected to a mains supply, then a conductive connection must be established between the **SL** PE terminal and the **N** neutral terminal.

The **AQV 2 PEN** external cross-connector fulfils this requirement.

Cross-connection rails QS for stud terminals HSK

With neighbouring stud terminals, it is possible to implement potential distribution over a two- or three-pole cross-connection. The corresponding windows on the **TW** partition must be slotted out first, in order to mount the cross-connections.

Features:
· 2 - and 3-pole versions
· Potential distribution between different sizes is also possible
· Designed for the rated current of the corresponding stud terminal
· Clearly saves time with quick potential distribution

QS cross-connection rail

With neighbouring stud terminals, it is possible to implement potential distribution over two-pole **QS** cross-connection rails. The cross-connections are each designed for the rated current of the terminal. They are simply placed together with the cable lug over the stud. When using the cross-connection rails, do not use the partitions between the individual terminals. A cover over the terminals is not possible here.

Features:
· 2-pole version
· Designed for the rated current of the corresponding stud terminal
· Clearly saves time with quick potential distribution

Insulated cross-connections FQI (potential distribution)

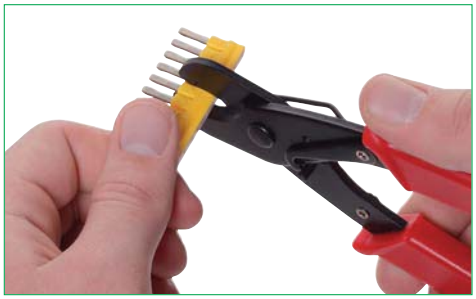
The **FQI** pluggable cross-connection system helps you to save time while distributing potentials over terminal blocks of similar or different cross-sections. The pluggable design of the **FQI** offers the advantage that it can carry the rated current even while operating at the rated voltage of 800 V! The **FQI** is constructed to protect against accidental touch. It is available in 2 – 10 poles.

Parallel connections between various potentials, without loss of poles, is possible in the 1.5 mm², 2.5 mm² and 4 mm² cross-section ranges.

With the standard terminal blocks, it is possible to skip over terminal blocks by breaking out individual contact poles.

The disconnected contact elements can be labelled by using the plastic insulation from the cross-connection.

It is possible to shorten the cross-connection with a cutting tool, but you must then make sure that the cut side is fitted with an end plate so that the voltage rating is maintained. For standard terminal blocks in the cross-sections 1.5 mm² 2.5 mm² and 4 mm², it is adequate to attach the **FQI**s in an offset position (two cross-connection channels).



In order to help distinguish between different potentials, other colour variants are available for the **FQI 1,5**, **FQI 2,5** and **FQI 4** cross-connectors!

Insulated cross-connections FQI

Cross-connections FQI

The **FQI** cross-connections for the **FRK** pressure-spring connection system have a pluggable, insulated design. They can be used to conduct the rated current of the corresponding cross-section range.

The terminal block design and the variability of the cross-connector ensure excellent flexibility.

Insulated cross-connections ZQI (potential distribution)

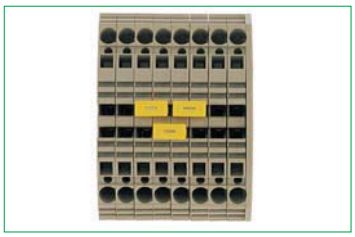
The **ZQI** pluggable cross-connection system helps you to save time while distributing potentials over terminal blocks of similar or different cross-section ranges. The pluggable design of the **ZQI** offers the advantage that it can carry the rated current even while operating at the rated voltage! The **ZQI** is constructed to protect against accidental touch. It is available in 2 – 10 poles. It is available with up to 99 poles in the 2 mm² cross-section range.

Parallel connections between various potential, without loss of poles, is possible in the 2.5 mm² and 4 mm² cross-section ranges.

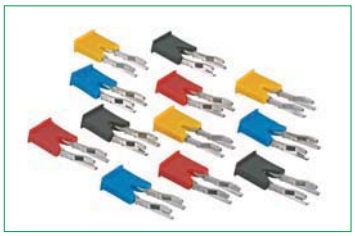
With the standard terminal blocks, it is possible to skip over terminal blocks by breaking out individual contact poles.

It is possible to shorten the cross-connection with a cutting tool, but you must then make sure that the cut side is fitted with an end plate so that the voltage rating is maintained. For standard terminal blocks in the cross-sections 2.5 mm² and 4 mm², it is adequate to attach the **ZQIs** in an offset position (two cross-connection channels).

In the 10 mm² and 16 mm² cross-sections, cross-connections larger than two poles are implemented using the corresponding **ZQI/.../2** together with a chain link.



In order to help distinguish between different potentials, other colour variants are available for the **ZQI 2,5** and **ZQI 4** cross-connectors!



Important note:
Do not deform the shape of the **ZQI**s (do not take apart or press together).

Cross-connections ZQI | Vertical connector ZVQI | External insulated cross-connector AQI

Overview of cross-connections available with tension-spring connection system

The cross-connections listed here can be used to connect up to twenty terminals blocks with each other. This flexible system helps you to save time during installation and thus also save money.

The **ZQI 2,5/99** is a many-pole pluggable cross-connector for all tension-spring terminals with rated cross-sections of 2.5 mm². There is a captive connection between the insulation and the crest. The **ZQI 2,5/99** covers 99 poles. A suitable cutting tool can be used to shorten it to the required pole length.

The **ZVQI 2,5** vertical cross-connector provides a pluggable electrical connection between the levels of the **ZRKD** and **ZIKD**. When a vertical connector is inserted, it is still possible to make a cross-connection to the neighbouring terminal blocks.

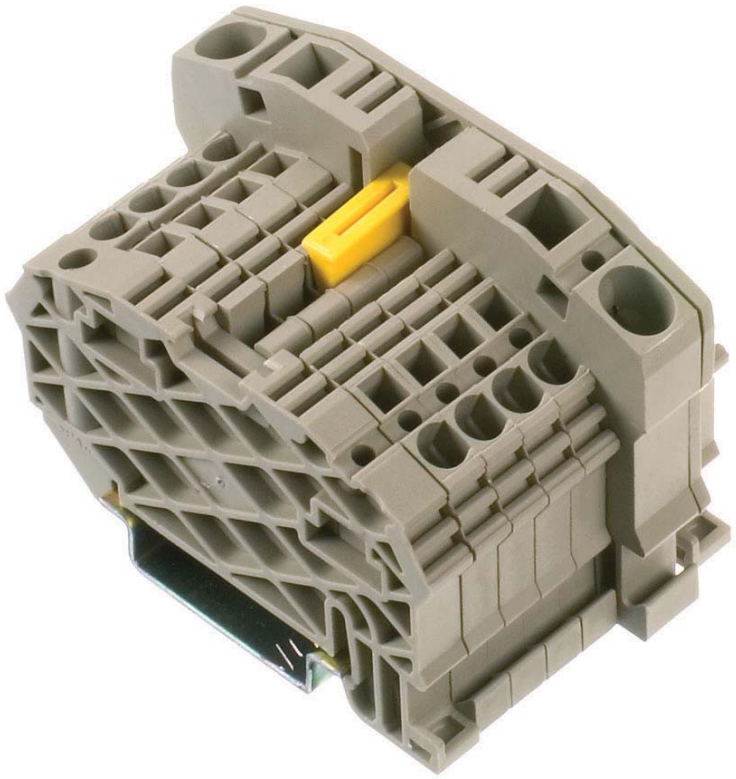
Insulated external cross-connector

External cross-connection bridges make it possible to branch off the potential for terminals which are not available in the middle of the terminal via a cross-connection channel. When external cross-connections are used, the rated cross-section is reduced to the next smallest wire size.

Cross-connections ZQI (feeding potentials)

It is possible to cross-connect large cross-section terminals to smaller ones. This allows for a simple distribution among different potential levels and cross-section levels.

The **ZQI** pluggable cross-connection system helps you to save time while distributing potentials over terminal blocks of similar or different cross-section ranges.



Cross-connections ZQI (potential distribution)

The ZQI pluggable cross-connection system helps you to save time while distributing potentials over terminal blocks of similar or different cross-section ranges.

Insulated cross-connections ZQI/AQI/ZVQI

Cross-connections ZQI | AQI | ZVQI

The cross-connections for the **ZRK** tension-spring connection system have a pluggable, insulated design. They can be used to conduct the rated current of the corresponding cross-section range.

The terminal block design and the variability of the cross-connector ensure excellent flexibility.

Individual covers EA| Individual and four-way covers AD

Individual covers EA | Individual and four-way covers AD

VDE regulations require that the mains terminals be covered. The **EA** and **AD** yellow covers (labelled with a lightning flash) are used to cover the operational channel and the cross-connection channel of the terminal. Thus they discourage operation of the terminal while live voltage is present. The **EA 1** and **AD 1** covers are snapped down on the terminal blocks. The **BS 1** marker pen or the **EMS** labelling system can be used to label the white variants. The **AD 4**, which is designed for four terminals of the corresponding cross-section size, is mechanically attached using two plastic screws. Two print variants (German and English (.../E)) are available.

Cross-connection channel cover AD

For terminals of types **RK 2,5-4**, **RK 6-10**, **RK2,5-4 ZR**, **RK 2,5-4 ZRL**, **FF 2,5** and **SF 2,5-4**: 60mm long covers are available which can be used to provide touch protection for uninsulated cross-connections.
The profile section is made from polyamide 6.6 and is delivered as either transparent or in white.

Partition plates TWMF/TW | Cover profile AD | Insulation plate TRS | Connecting sleeves VBS

Cover profile AD combined with partition plates TWMF
Many safety requirements (for example, the "Electrical facilities and operating devices" accident prevention regulations (VBG 4) or VDE 0106 part 100/3.83) require that the active components of equipment are protected against direct touch. For terminals using **Q** cross-connectors or test sockets, this protection is provided by additional covers. Cover profiles with assigned support plates are used for this purpose. They can be used with the main terminal sizes. The support plates can be positioned at the end or between groups of terminals. They can be attached to **TS 32** or **TS 35** rails.

Connecting sleeves VBS

Connecting sleeves for coupling two or three hinged levers from the fuse-disconnect terminals **STK 2** and **SIK 10** or **SIK 10 Z** and **STKD1**. The **VBS** plastic sleeves are pushed on to the sides of the hinged lever. They form a mechanical connection to two-pole or three-pole units. This makes it possible to simultaneously disconnect multi-pole circuits.

Connecting sleeve VBS

The **PS 2.3** and **PS 4** test plugs can be used with screw-connection terminals in cross-sections ranges 2.5 mm² to 10 mm². They allow you to connect to socket plugs and measure directly on the busbar of the corresponding terminal. In contrast to the **TA** test adapters, the **PS** test plugs do not mechanically lock with the terminal. The **ZS 2.3/4** adapter plug permits the conversion of a 4-mm Ø plug to a 2.3-mm Ø socket plug.

Test adapter TA/TAD

Test adapter TA

The **TA** test adapters can be assembled to any pole counts using the locking pegs. They can be used to test assembled terminal blocks in a quick and safe manner. Wires with cross-sections ranging from 0.5 mm² to 1.0 mm² can be crimped or soldered to the spring-loaded tracer pins. Depending on the version, the test adapters establish contact with the screw head, the cross-connection or the busbar. The test adapter sets consist of a housing, spring and tracer pin.

Test adapter ZTA | Reducing sleeve ZRH

Test adapter ZTA

The **ZTA** test adapters can be assembled to any pole counts using the locking pegs. They can be used to test assembled terminal block strips in a quick and safe manner.

Wire cross-sections ranging from 0.5 mm² to 1.0 mm² can be connected. Each tension-clamp terminal has a corresponding test point for establishing contact to the potential voltage on the busbar.

Reducing sleeves ZRH

CONTA-CLIP offers reducing sleeves for cross-sections of 2.5 mm² and 4 mm². This ensures that small wires are properly positioned in their terminal points without any splicing off of individual strands. A professional and proper contact in ensured when the reducing sleeves are attached prior to the connection.

Test plug PS

The **PS 2.3** test plugs allow you to make a direct measurement on the test point of the corresponding terminal when working with tension-spring terminals with cross-sections ranging from 2.5 and 4.0 mm².
In contrast to the **ZTA**, the **PS test plug** does not snap in mechanically with the terminal.

Disconnect plug

The established disconnect-plug system has a high-quality surfaces and thus minimal contact resistance. This ensures precise, unbiased measurement readings. A variety of components can be soldered into an unpopulated test plug.

Motor vehicle fuses

Construction:
- Plastic body with 2 contact pins
- DIN 72581-3C
- Colour-coded amp values

Note:
- Spade fuses can only be run (the long-term load) with 80% of the fuse's rated current. Be sure to take the derating curve into consideration!
- The fuse may not be inserted or taken out while under load.
- You should use the largest wire section possible so that the thermal power loss of the fuse can be effectively discharged.
- Rated voltage 32 V DC

Specific accessories, test-disconnect terminals PTK

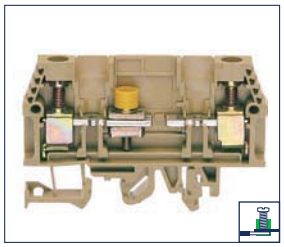
Test-disconnect terminals PTK

Test-disconnect terminals are mostly used in the sectors of electricity generation and supply.
They are tailored to the variety of switching demands for current-converter secondary circuits that predominate in these sectors.

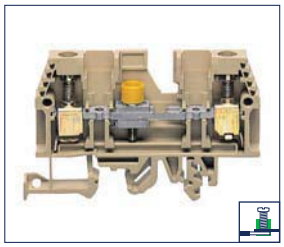
CONTA-CLIP test-disconnect terminals are available in the following three basic versions, each with or without pre-assembled STB socket plugs

All versions provide touch-safety protection in compliance with VBG 4. A captive sliding partition is used to separate the current and voltage paths. The current switch position is always easy to detect since the disconnect screw has a yellow insulating sleeve. Sockets plugs for a test tap can be attached to all versions using the **PS 4** test plug.

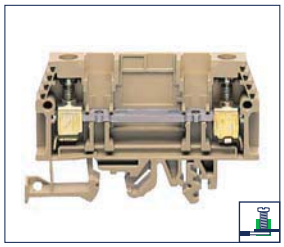
1130.2 PTK 10/LT
can be separated lengthwise



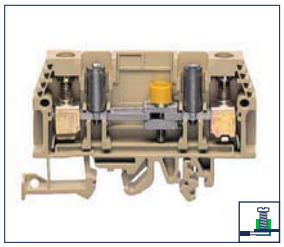
1132.2 PTK 10/QT
can be separated perpendicularly



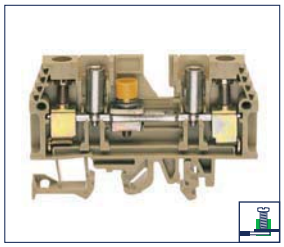
1134.2 PTK/10/DU
Feed-through terminal



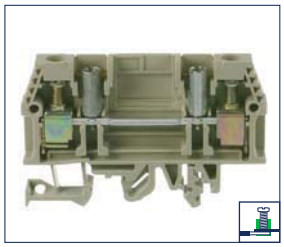
1131.2 PTK 10/LT/STB
can be separated lengthwise with STB



1133.2 PTK 10/QT/STB
can be separated perpendicularly with STB



1135.2 PTK 10/DU/STB
Feed-through terminal with STB



Examples of basic circuits using PTK disconnect terminals

Current transformers must always have a secondary circuit when electricity meters and measuring instruments are being replaced, or when making comparative measurements. Otherwise they could be destroyed by “ramping up”.

Measuring current using a current transformer | **Operations** | **Swapping the measuring device** | **Testing the measuring device**

Cross-switches

The **VH 19** connecting sleeves and the **BS 25** screws or the **STB 35** socket plugs are required for fastening the **QVS** cross-switch bridge. The screws and socket plugs are available with or without coloured labelling. When opened, the **QVS** slider and the screws for the wire connection are not accessible. Thus it is not possible to accidentally unclamp the measuring instrument.

Socket plugs

The **STB 35** socket plugs are used in the test-disconnect terminals for holding the **PS 4** test plug or the **KSS 2-8** short-circuit plug. The **STB 35** socket plugs can also be used when you need to test at the same time that a **QVS** is attached. The **STB 14/4** socket plugs can be screwed into the cross-connection channel. The are used to hold the **PS 4** test plugs or the **KSS 2-8** short-circuit plugs.

CE electrical cabinet socket outlet STD-TS|LED

CE electrical cabinet socket outlet STD-TS / LED

The **STD-TS / LED** electrical cabinet socket outlet can be quickly and conveniently snapped onto a standard TS35 rail using its solid metal foot. This results in significantly reduced assembly work and installation costs! The electrical connection uses an integral screw terminal and then offers a secure pluggable electrical connection for programming devices, service devices or mounting tools. A LED voltage display has also been integrated into the design.

STD-TS / LED

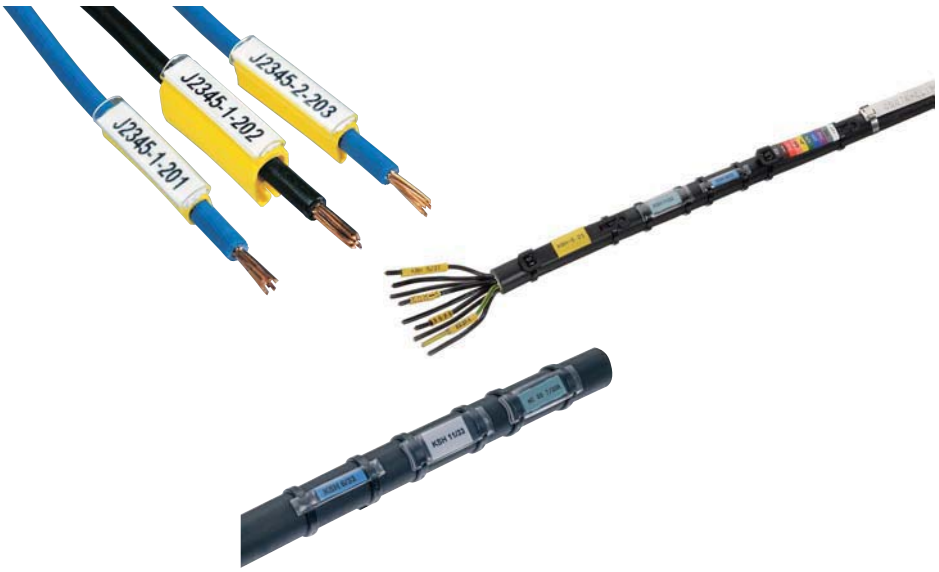
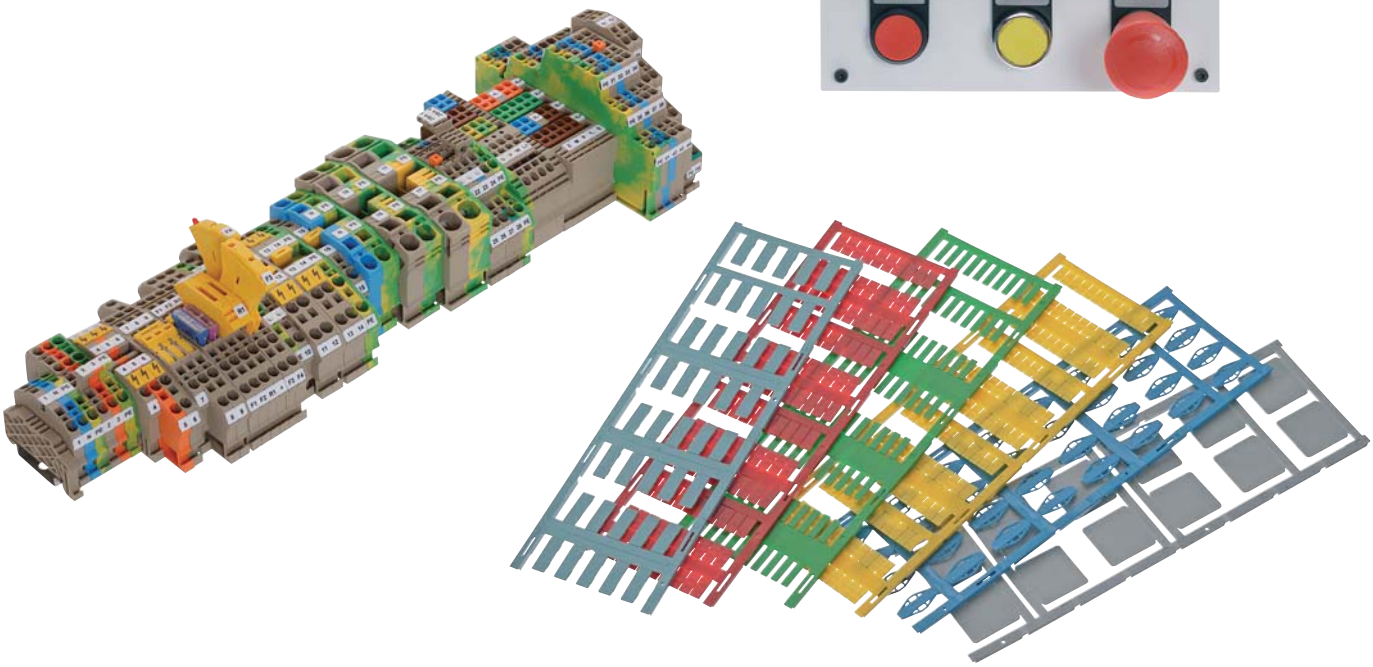
Notes

CONTA-LABEL marking systems

Marking cables, connectors and devices to provide unambiguous, logically arranged and permanently legible identification helps to prevent mis-wiring, increases safety and reduces work levels, which in turn reduces manufacturing and maintenance costs including those caused by production down-times. These marking requirements are also specified in the European standard EN 60204 (VDE 0113 part 1).

In fulfilling all of these requirements, the **CONTA-CLIP** marker line offers a solution for all tasks involved with the marking of electrical equipment. We offer a wide variety of options for marking terminal blocks, cables, wires and devices: ready-to-use standard prints, blank markers for the customer to print himself as well as customized inscriptions.



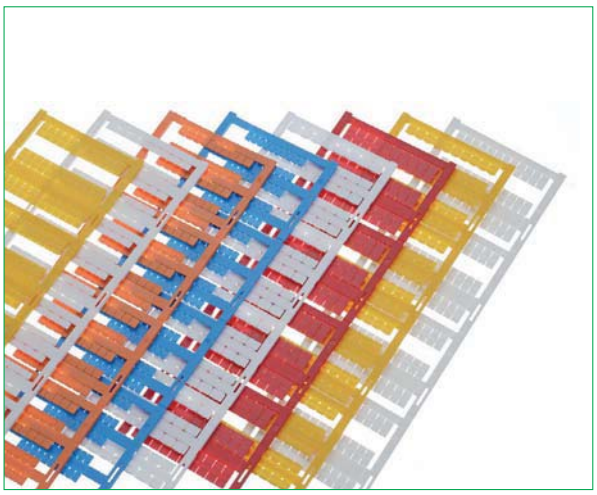


CONTA-LABEL marking systems

Overview

Terminal markers: starting at page 336

Our extensive line of products feature ready-to-use markers with standard and customized print (Pocket-Maxicard **PMC**), unprinted markers in the classic Maxicard format for DIY printing with the **EMS-2** plotter, and marker holders and group label holders in a variety of designs. The tables on pages 336 and 337 offer an overview of which markers can be snapped onto which terminals. The pitch size is the deciding factor when making the selection. With a terminal width of 5 mm, the marker must be 5 mm wide to enable strips of markers to be attached to the terminal. If the marker is to be attached to a terminal with a larger pitch, then the strips must be separated into individual markers.



Wire and cable markers: refer to page 364

The product line consists of markers for wires with small diameters and markers for cables with larger diameters. **CONTA-CLIP** offers a wide variety of solutions: these include open or closed markers, printed or blank for individual marking tasks, combinations of single markers with transparent sleeves or clip-on single markers with or without cable ties, markers for particularly aggressive environments or markers for environments in which halogen-free materials are obligatory. Our **EMS-2** plotter system allows you to conveniently print on practically all markers in Maxicard format, strips or single markers.

Wire and cable markers: refer to page 396

The product line includes markers for devices and systems manufactured by the major manufacturers. Markers based on classic adhesive techniques and snap-on markers are also available. The markers are available with custom print or as blank markers for marking with our **EMS-2** plotter system.

Labelling systems and software: refer to page 408

The **CONTA-CLIP** labelling software is easy to use, intuitive and suitable for all marking requirements. All integrated functions are user controlled and linked to our Online Help. The marking software facilitates manual entry of data via the keyboard. It supports numerous data formats and also allows data to be imported directly from the project file. Excellent user-friendly functionality makes our hardware easy to use. We offer a plotter system and a modular attachable engraving unit as well as a thermal transfer printer for printing on rolls of labels. The program is rounded off by a wide variety of accessories designed to facilitate easy handling in all application solutions.

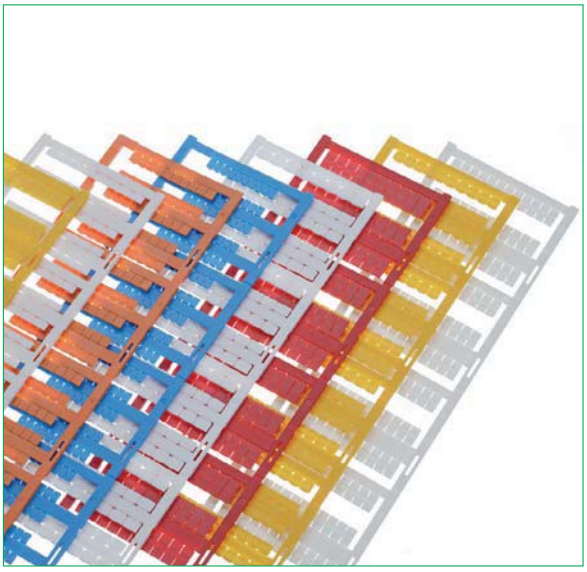
CONTA-LABEL marking systems

Short description of materials

CONTA-CLIP marking systems are available in a variety of designs and materials. The numerous variants made of plastic and stainless steel are designed to suit the respective application. The material characteristics are described below.

POLYAMIDE PA 6.6

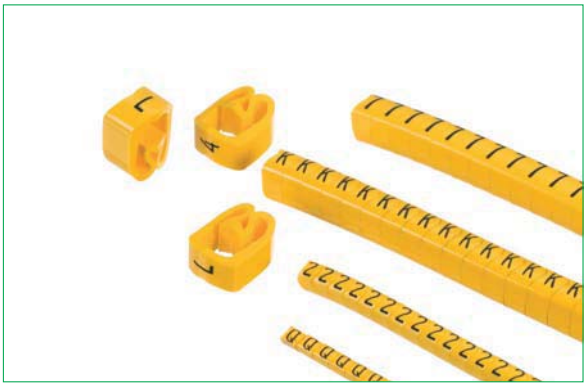
Polyamide 6.6 has good electrical and mechanical characteristics, high strength properties and is resistant to ageing. It is also highly ductile thanks to its semi-crystalline composition which allows it to absorb little moisture. This offers a clear advantage compared to polycarbonate material (PC). PC is less resistant to the strong substances used in industrial processes (such as cutting oil or cooling lubricants). PA 6.6 also is much more resistant than PC against solvents such as ketones, acetates, and aldehydes. PA 6.6 also features an improved resistance to UV radiation compared to PC. While PC quickly starts to turn yellow and is less impact resistant, PA 6.6 only exhibits a minimum reduction in UV surface stability. PA 6.6 also retains its colouring and technical characteristics much longer than PC.



Products:
SB, PMC, Maxicard, AS labelling strips, Marker holders, group marker holders

PVC

PVC is made from polyvinyl chloride and contains halogens. PVC has a longer service life and is resistant to the effects of weather, corrosive saline solutions, most acids and alkalis. Soft PVC contains plasticizer. The material is both strong and flexible. It can withstand temperatures from -30°C to +80°C.



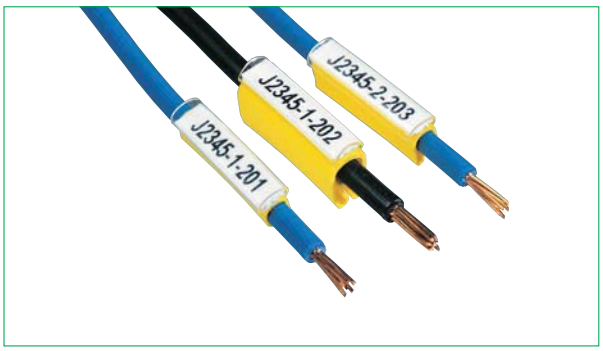
Products:
KBH, KBH-S, KBH-C, KH, KHE, KSH

Short description of materials

ZEREX

This is a polyurethane mixture based on poly-ether (TPU). ZEREX is a halogen-free, flame-resistant extrusion mixture used mainly when specifications require good flame retardant properties and that smoke and toxin development is restricted. It can withstand temperatures from -30°C to +90°C.

Products:
KHZ



Rust-free material

Stainless steel SS 2347 corresponds to AISI 316 and W. No. 1.4404. Acid-resistant steel contains a minimum of 17 % chrome, 11 % nickel and 2 % molybdenum. It is used chiefly where saline and damp conditions prevail and where corrosion resistance against acids is a requirement. It can withstand temperatures between -80°C to +500°C.

Products:
MPS, MPS H, CTS

Polyester

This is an impact-resistant material that is resistant to chemicals, weak acids, UV radiation, salts and solvents. The material does not shrink and is suitable for permanent print on labels and markers. It can withstand temperatures from -40°C to +125°C.

Terminal markers – Pocket-Maxicard PMC SB

Pocket-Maxicard PMC SB 4

The **PMC SB 4** Pocket-Maxicard is suitable for labelling all **CONTA-CLIP** terminal blocks that are wider than 4 mm.

They are available in a variety of pre-printed standard markers, in a blank version, or custom printed to any requirement.

The blank Pocket-Maxicards can easily be printed on using the **EMS** plotter system.

Material: Polyamide 6.6 UL 94-V2, halogen-free

Pocket-Maxicard PMC SB 7,5

The **PMC SB 7,5** Pocket-Maxicard is suitable for labelling all transformer terminals from the **TK** and **TKS** series (starting at page 198).
They can also be used with transformer terminals from other manufacturers (such as PHOENIX CONTACT, Wago or Adels). They are available blank or with custom printing.

The blank Pocket-Maxicards can easily be printed on using the **EMS** plotter system.

Material: Polyamide 6.6 UL 94-V2, halogen-free

Terminal markers – Pocket-Maxicard PMC

Pocket-Maxicard PMC BSTR 8

The **PMC BSTR 8** Pocket Maxicard is suitable for labelling all **CONTA-CLIP** terminal blocks that are wider than 8 mm.

These are particularly suitable for longer sequences of characters.

They are available in a variety of pre-printed standard markers, in a blank version, or custom printed to any requirement.

The blank Pocket-Maxicards can easily be printed on using the **EMS** plotter system.

Material: Polyamide 6.6 UL 94-V2, halogen-free

Notes

Terminal markers – Quick marking system SB

Quick marking system SB 5

The **SB 5** quick marking system is suitable for labelling all **CONTA-CLIP** terminals that are wider than 5 mm.

They are available in a variety of standard, pre-fabricated markers or with custom labelling.

The blank **SB 5** markers are also available as **MC SB 5/200 WH** (3300.7 on p. 356). They can easily be printed on using the **EMS** plotter system.

Material: Polyamide 6.6 UL 94-V2, halogen-free

Terminal markers – Quick marking system SB

Quick marking system SB 6

The **SB 6** quick marking system is suitable for labelling all **CONTA-CLIP** terminals that are wider than 6 mm.

They are available in a variety of standard, pre-fabricated markers or with custom labelling.

The blank **SB 6** markers are also available as **MC SB 6/200 WH** (3301.7 on p. 356). They can easily be printed on using the **EMS** plotter system.

Material: Polyamide 6.6 UL 94-V2, halogen-free

Terminal markers – Quick marking system SB

Quick marking system SB 8

The **SB 8** quick marking system is suitable for labelling all **CONTA-CLIP** terminals that are wider than 6 mm.

They are available in a variety of standard, prefabricated markers or with custom labelling.

The blank **SB 8** markers are also available as **MC SB 8/160 WH** (3328.7 on p. 357). They can easily be printed on using the **EMS** plotter system.

Material: polyamide 6.6 UL 94-V2, halogen-free
Halogen-free

Terminal markers – Quick marking system AS 3/10

Quick marking system AS 3/10

The **AS 3/10** are suitable for labelling all terminal blocks, end stops or marker holders wider than 5 mm.

The compact shape and one-character inscription allow the printed standard tags to be put together in any combination. Two or four tags (depending on the terminal block or end stop) can be attached to a single terminal. The markers can be attached to the **SchT** marker holder so that they are read vertically with from three to twelve characters.

Material: Polyamide 6.6 UL 94-V2, halogen-free

Terminal markers – Maxicard MC SB and MC BSTR

Maxicard MC SB BSTR

The Maxicard **SB** and **BSTR** series are multi-functional marking systems for marking **CONTA-CLIP** terminal blocks.
The **MC BSTR** provides the ideal solution for longer strings of characters. The **MC BSTR 5/... MI** variants are fitted with a centrally positioned foot that is used when the standard **BSTR** markers cover the cross-connection channel or wire entry.
They are available blank or with custom printing. The blank Maxicards can easily be printed on using the **EMS** plotter system.

Material: Polyamide 6.6 UL 94-V2, halogen-free

Terminal markers – Maxicard MC MM

Maxicard MC MM

The **Maxicard MM** multi-markers can be used to label terminals from other manufacturers.

MC MM fit on terminals from Phoenix Contact, Wago and Entrelec.

They are available blank or with custom printing. The blank Pocket-Maxicards can easily be printed on using the **EMS** plotter system.

Material: Polyamide 6.6 UL 94-V2, halogen-free

Wire and cable markers – Maxicard MC KMC

Maxicard MC KMC

The **KMC** Maxicard provides a clear, quick and simple solution for marking a wire. The **MC KMC** can be attached to a wire that has already been connected. The plastic halves snap together to hold the marker captive on the wire.
Perfect for use with wire cross-sections from 0.14-1.0 mm² or 0.9-2.6 mm².
Three different lengths are available.
They are available blank or with custom printing.
The blank Maxicards can easily be printed using the **EMS** plotter system.

Material: Material: polyamide 6.6 UL 94-V2, halogen-free

Wire and cable markers – Maxicard MC ESS and MC GS

Maxicard MC ESS

The **Maxicard ESS** provides a clear, quick and simple solution for marking a wire. The **MC ESS** single markers are pushed into custom-designed **KH**, **KHZ**, **KH E** or **KSH** cable-marker sleeves.

- When used together, the **MCESS** and the cable marker sleeves ensure that your labels are protected from environmental influences.
- Can be used for marking wires up to 70 mm².
  Available in five different lengths.
  They are available blank or with custom printing.
  The blank Pocket-Maxicards can easily be printed on using the **EMS** plotter system.

Wire and cable markers – Cable marker sleeves KH/KHZ

Cable marker sleeve KH and KHZ

The **KH** and **KHZ** cable marker sleeves, used in combination with the **ESS Maxicard**, enable cables to be labelled quickly and conveniently.

- The ferrule is easier to attach to the wire because of the special bellows shape of the cable marker sleeve.
- When used together, the **MCESS** and the **KH** and **KHZ** cable marker sleeves ensure that your labels are protected from environmental influences.
- Oval-shaped pocket makes the labels easy to insert before or after installation.
- The elastic pocket both protects and secures the marker.
- Can be used for marking wires up to 70 mm².
- Available in five different lengths and four wire diameters.

Material: KH Soft PVC, no cadmium or silicone
Material: KHZ Soft PVC, no cadmium, halogen or silicone

Wire and cable markers – Cable marker sleeves KH E

Cable marker sleeve KH E

The **KH E** cable marker sleeves, used in combination with the **ESS Maxicard**, enable cables to be labelled quickly and conveniently.

- The ferrule is easier to attach to the wire because of the special bellows shape of the cable marker sleeve.
- When used together, the **MCESS** and the **KH E** cable marker sleeves ensure that your labels are protected from environmental influences.
- Oval-shaped pocket makes the labels easy to insert before or after installation.
- The elastic pocket both protects and secures the marker.
- Can be used for marking wires up to 70 mm².

Available in five different lengths and six wire diameters. Many included in one package for cost-effective marking.

Material: PVC

Wire and cable markers – Cable marker sleeves KSH

Cable marker sleeve KSH

The **KSH** cable marker sleeves, used in combination with the **ESS Maxicard** and **GS markers**, enable cables to be labelled quickly and conveniently.
The **KSH** is simply attached to the cable using cable ties. This makes them particularly suitable for cables with large cross-sections. When used together, the Maxicard and the **KSH** cable marker sleeves ensure that your labels are protected from environmental influences.

Available in three different sizes.

Material: Soft PVC, no cadmium or silicone

Wire and cable markers – Maxicard MC KMS

Maxicard MC KMS

The **KMS Maxicard** provides a clear, quick and simple solution for marking a cable. The **MC KMS** is attached to the cable using one or more cable ties.

- Perfect for use with wire cross-sections of 16 mm².
- Available in four different sizes.

They are available blank or with custom printing. The blank Pocket-Maxicards can easily be printed on using the **EMS** plotter system.

Material: Material: polyamide 6.6 UL 94-V2, halogen-free

Wire and cable markers – Cable tie KB | Cable marker KKM

Cable tie KB | Cable marker KKM

KB and **KKM** cable markers provide you with a way to label your cables quickly and simply.

KB:

The cable ties come with an integrated cable marker. The **BS-1** marker pen can be used for labelling as can the **GKE** labels which can be printed on with a thermal-transfer printer.

Available in two lengths.

Material: Transparent nylon 6.6, halogen-free and silicone-free

KKM:

The **KKM** cable markers are mainly used indoors. They are attached to the cable using cable ties. They can be labelled with **GKE** labels or **MC GST** Maxicards.

They are available in two sizes. Material: Polypropylene/nylon 6.6, transparent, halogen-free and silicone-free.

Wire and cable markers – Stainless steel marking system MPS

Stainless steel markers MPS

The **MPS** marking system provides a high-quality method for marking cables, wires, pipes and components that is quick, safe and simple.

Single and multi-character marking – with high-quality embossing
Single-character marker: 0-9, A-Z, Ä; Ü; Ö, special characters and symbols

- Very good resistance in saline and damp environments
- Good corrosion resistance against acids
- First-class quality controlled

Material: Acid-resistant, stainless steel

Wire and cable markers – Stainless steel marking system MPS

Stainless steel markers MPS

The **MPS** marking system provides a high-quality method for marking cables, wires, pipes and components that is quick, safe and simple.
Customer-specific multi-character marking, single-row embossing with up to 30 characters, or double-row embossing with up to 43 characters per row.
- Very good resistance in saline and damp environments
- Good corrosion resistance against acids
- First-class quality controlled

The **MPS H** is a holder with raised profiles at both ends for fixing steel cable ties.
It is available in five different lengths.
The markers are simply stretched over the holder

The **CTS** stainless steel cable ties can be used outdoors under extremely harsh conditions.
Easy processing is possible with a pliers or the **MPS Tool M**.
Material: Acid-resistant stainless steel

MARKING SYSTEMS

Cable and wire markers – Adhesive cable labels KKE

Adhesive cable labels KKE

The **KKE** cable markers allow you to mark cables and wire with an outer diameter of up to 32 mm in a safe, easy and quick manner.

- Quick and professional marking with the **TTP** thermal-transfer printer or **EMS** plotter.
- The **BS-1** marker pen provides uncomplicated and quick marking of blank labels

Format: DIN A4 or roll
Material: Polyester

Device and installation markers – Maxicard MC GS

Maxicard MC GS

The **GS** Maxicard allows you to mark on the contactors, automatic switchgear, relays and circuit-breakers from leading manufacturers in a safe, quick and simple manner.

The markers are available for devices manufactured by the following companies: ABB, Siemens, Telemecanique, Moeller, GE, AEG, ifm-electronic, and Finder.

The self-adhesive types (**MC GS.. K**) can be used anywhere in the field or in the switchgear cabinet.

They are available blank or with custom printing. The blank Pocket-Maxicards can easily be printed on using the **EMS-2** plotter system.

Material: Polyamide 6.6 UL 94-V2, halogen-free

Device and installation markers – Maxicard MC GST

Maxicard MC GST and holder GST-H

The **GST** Maxicard provides a clear, quick and simple solution for marking command and alert devices.

The markers are snapped onto the holders or attached using double sided tape.

The markers fit on the **GST-H** holder. The holder is available in four sizes and has a 22-mm diameter.

They are available blank or with custom printing.
The blank Pocket-Maxicards can easily be printed on using the **EMS** plotter system.

Material: polyamide 6.6 UL 94-V2, halogen-free

Device and installation markers – Maxicard MC GSU

The **GSU Maxicard** provides a clear, quick and simple solution for marking devices, components and switchgear cabinets.

The marker is snapped in to the **GSU-H** holder. It is protected from environmental conditions by the **STR MC GSU** protective strips.

It is available in seven sizes, as either snap-on (R) or stick-on (K) variants.

They are available blank or with custom printing.
The blank Pocket-Maxicards can easily be printed on using the **EMS** plotter system.

Material: Polyamide 6.6 UL 94-V2, halogen-free

Device and facility markers – GKE adhesive device labels

Adhesive device labels GKE

GKE adhesive device labels bring clarity to the switchgear cabinet. With four different sizes and three colours, the **GKE** series provides the right marking solution for any position in the switchgear cabinet.

Quick and professional marking with the **TTP** thermal-transfer printer or **EMS** plotter.

The **BS-1** marker pen provides uncomplicated and quick marking of blank labels

Device and facility markers – Plastic engraving cards GMP

Plastic engraving material GMP

Markers for engraving and identification on switchgear cabinets, machines and facilities.

This high-quality marking option is a good solution for any application.

GMP markers can be engraved on with the **EMS Engraving Unit** or they can be used with plotter pens.
Precise alignment of the 300 x 200 mm cards on the plotter base plate by means of the adhesive inlay **CCI-8**.
Pre-milled markers in various sizes or 300 x 200-mm blank cards are available.
Markers come with a silver base colour and black fill colour or alternatively a white base colour and black fill colour.

Material: Acrylate polymer

Printing systems and software – Plotter systems EMS

Plotter system EMS-2

A system that fulfils a wide variety of marking and labelling requirements! The **EMS** Easy Marking System series features excellent versatility and ease of use.

- Generous loading capacity: up to 800 markers for the **EMS-2 DIN A3** with 4 inlays; up to 400 markers for the **EMS-2 DIN A4** with 2 inlays.
- Short loading times for various materials, thanks to fast and straight-forward exchange of inlays and automatic inlay recognition
- The accompanying labelling software, **CONTA-Sign**, is available in ten languages (German, English, French, Spanish, Hungarian, Italian, Dutch, Polish, Russian, Swedish)
- Free software updates can be downloaded from our web page
- High-quality labelling is ensured by the combination of our **PP** and **PPE** pens and the double-sided plotter arm design.
- Just one inlay for all **CONTA-CLIP** Maxicards
- Automatic calibration eliminates the need for manual adjustments

Printing systems and software – Inlays for plotter systems EMS

Inlays

CONTA-CLIP's EMS plotter systems allow you to conveniently print on practically any **CONTA-CLIP** marker. **CONTA-CLIP** offers a matching inlay for each marker.
Just pick the appropriate inlay for your marker and you're already on your way.

The **CONTA-Sign** marking software can automatically recognize the inserted inlay; the software can then suggest the appropriate marker to the user.

In addition to our proprietary inlays, **CONTA-CLIP** offers inlays for the standard markers from other manufacturers such as Partex, Phoenix, Wago or Weidmüller.
These are available upon request.

Printing systems and software – Thermal-transfer printer TTP

Thermal transfer printer TTP

The **TTP** thermal-transfer printer was designed specifically for marking solutions in systems and switchgear cabinet applications and is very versatile.

- Its speed and robustness make the **TTP** printer ideal for industrial applications.
- Short loading times for various materials, thanks to fast and straightforward exchange of label rolls.
- The accompanying labelling software, **CONTA-Sign**, is available in ten languages (German, English, French, Spanish, Hungarian, Italian, Dutch, Polish, Russian, Swedish)
- Free software updates can be downloaded from our web page
- The **TTP** can be used to print on **GKE** and **KKE** labels quickly and simply.

Printing systems and software – Plotter and printing pens

Plotter and printing pens

CONTA-CLIP offers a complete line of plotter pans and hand pens for labelling all types of markers and adhesive labels. The reusable **PP** pens are available in six different line widths and can be refilled using the **TP** ink cartridge. The disposable **PPE** pen is an affordable and long-lasting alternative to the **PP** pen. This pen is available with six line widths. The HP hand pen can be used to label quickly and easily without a plotter. The **TP** ink cartridges can be used to refill it. It is available in four different line widths.

The **PPE Ink-ED** does not dry out even if it has not been used for a long time, but is not suitable for marking outside of the switchgear cabinet because it is not resistant to smearing. Additional ink colours and line widths for the **PPE INK-ED** are available on request.

PPP 0.18 / PPP 0.25 / PPP 0.35

The **PPP** paper plotter pen is particularly well suited for labelling paper. It is designed for use with the **TPP** ink, which is particularly suitable for paper. The **PMP** permanent pen is an affordable pen that is primarily used for test purposes.
The **BS-1** marker pen is good for easy labelling tasks that are carried out on-site.
They can also be used with an adapter on a plotter.

Labelling systems and software – Labelling software CONTA-Sign

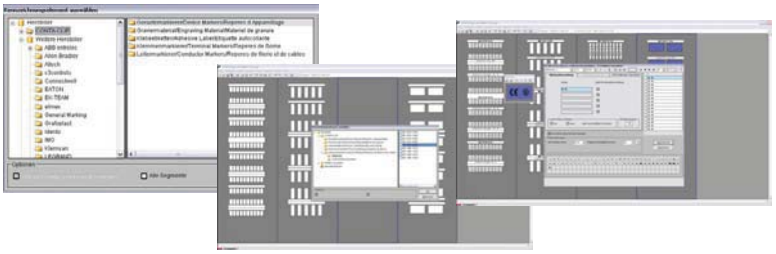
Labelling software CONTA-Sign

The Windows-based **CONTA-Sign** software was specially developed to produce professional marking solutions for systems and switchgear cabinet applications. This **CONTA-Sign** software can be used to control the **EMS-2** plotters (A3, A4 and eco). It can also be used with printing on heat-transfer roll printers (**TTP**) or with Windows-based printers. This software can be used to print on almost all of the markers that **CONTA-CLIP** delivers.

CONTA-Sign can be used to easily print text, barcodes or graphics on the markers.

The **CONTA-Sign** software is available in ten languages.

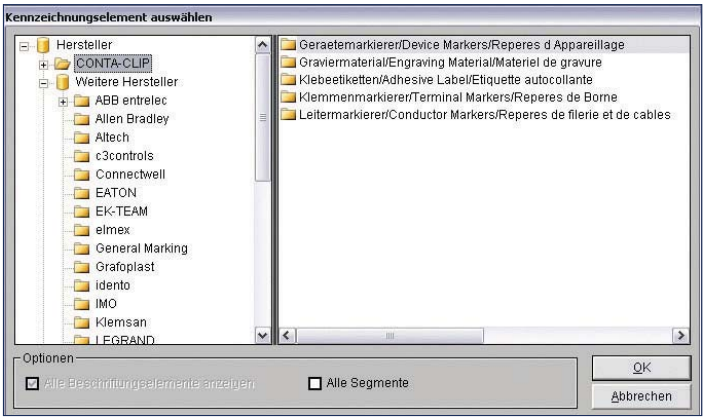
CONTA-Sign



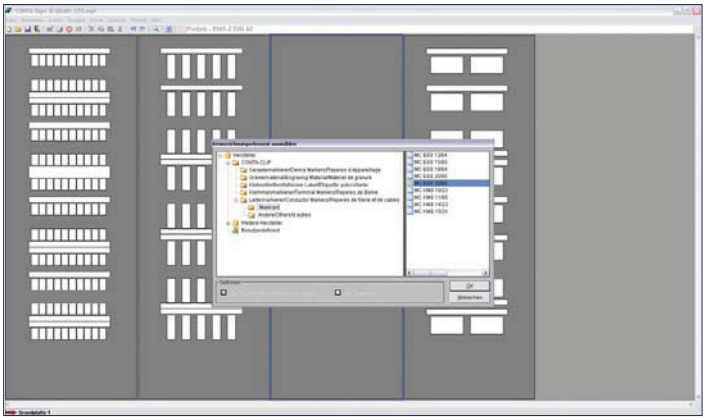
System requirements	
CPU	> Pentium II, 200 MHz
RAM	64 MB RAM
Drives	CD-ROM
Screen resolution	640 x 480 Pixels, we recommend at least 1024 x 768 pixels
Operating system	Windows: 98, ME, NT, 2000, XP, Vista, 7
Peripherals	Keyboard and mouse
Languages	German, English, French, Spanish, Hungarian, Italian, Dutch, Polish, Russian, Swedish

Features

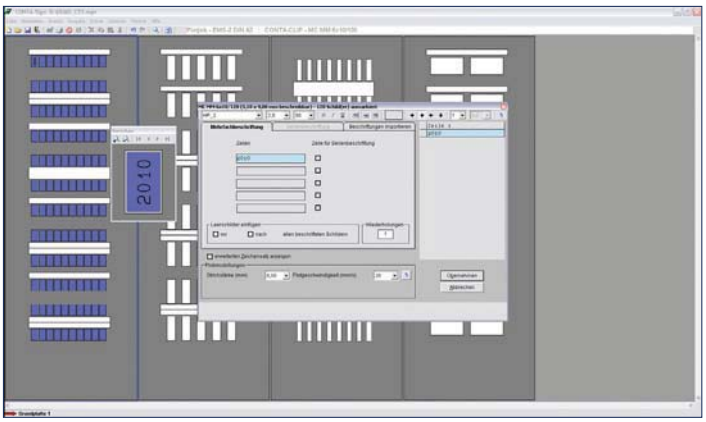
An import option is available for importing labelling specifications from project engineering software. Uncomplicated, retroactive processing of imported data in the software. Numerous user-friendly functions simplify manual input. Intuitive operation supports single, multiple and batch markings. Create individual markers using the marker design function. The pitch correction function guarantees faultless centering of labelling information even with large deviation in the material tolerances. Electronics symbols and special characters are included with the software.
Open programming means that the markers of different manufacturers are installed in the software as standard



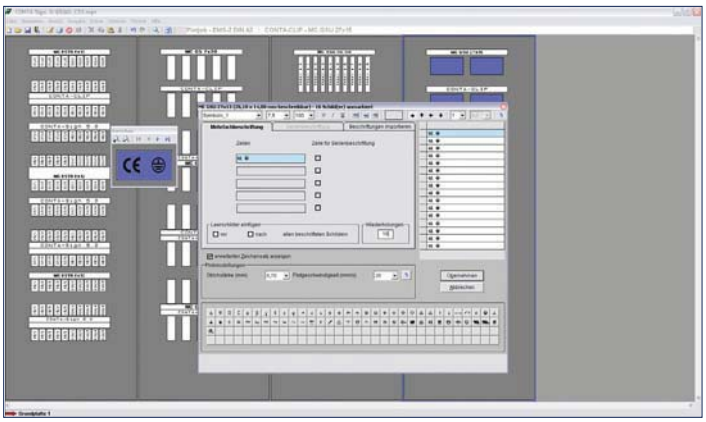
It is easy to select **CONTA-CLIP** markers or markers from other manufacturers



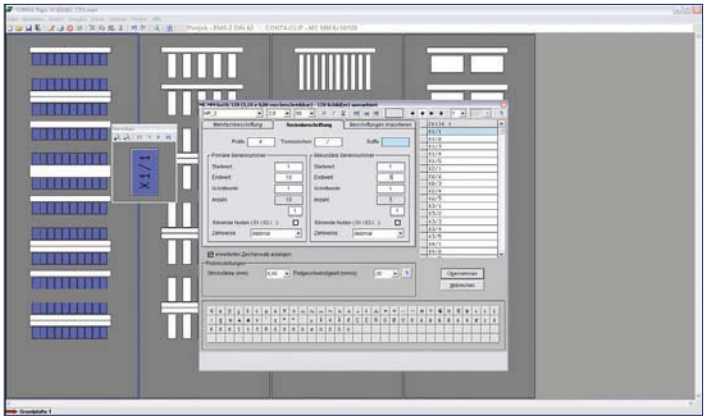
A variety of different markers in one project



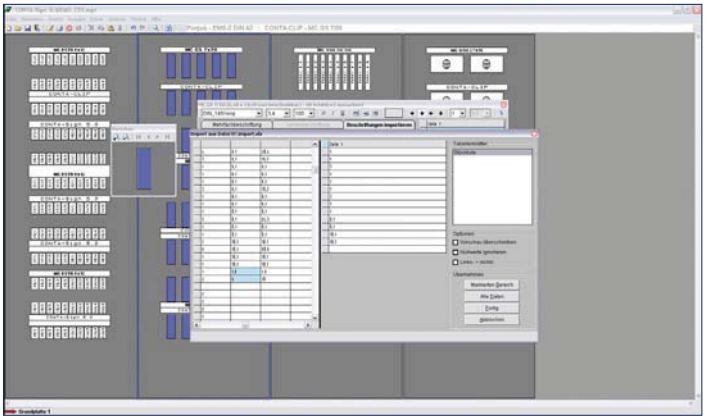
Number and letters are easy to enter



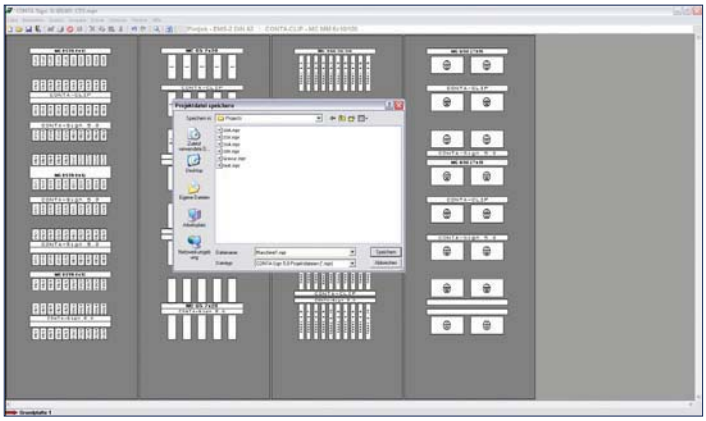
Many different electronic symbols are available by default



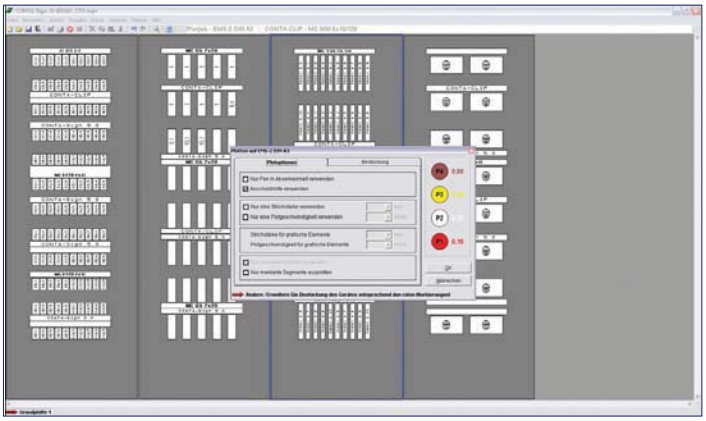
Batch entry



CAD/CAE, E-plan, plain text, Excel and Access formats can be imported



Projects can be created and saved



The EMS-2 plotter is easy to operate using the software

One software program for many different output devices

The user's manual contains a detailed description of the software functions. The manual can be downloaded for free from our web site at www.conta-clip.com.

CONTA-TOOL tool systems

CONTA-CLIP offers a wide selection of tools which help you to efficiently process wires and cables.
This includes diagonal cutters and stripping tools for shortening and stripping individual wire cores. We also offer one-handed cable cutters for cutting cables as well as crimping tools for processing wire-end ferrules, cable lugs and (BNC/TNC) plugs. In addition, we provide the supplemental material – consumable hardware, the required screwdrivers and testing devices – that contributes to a successful installation/maintenance process.

Cutting tools

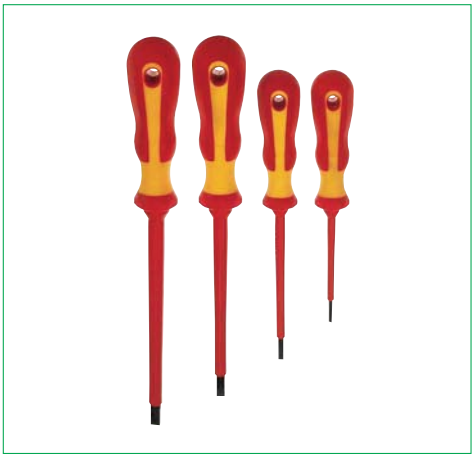
Aluminium and copper cables should be cut with a clean, straight cut that does not deform them. **CONTA-CLIP** offers a wide variety of cutting tools and one-handed cable shears that require minimal manual force to accomplish the job properly. The one-handed cable shears feature a ratchet function with power transmission in order to help you avoid fatigue.

Stripping tools

STRIPFIX stripping tools are customized precisely to the cross-section, insulation material and diameter of the wire or cable. They provide a safe, faultless and comfortable stripping action for wires ranging from 0.08 to 16 mm². These tools are auto-adjusting and come with an integrated diagonal cutter.

Screwdrivers

A wide variety of screwdrivers is available that has been customized to the **CONTA-CONNECT** range of products. They ensure that wires and cables are safely connected to **CONTA-CLIP** terminal blocks. These tools are available in insulated or uninsulated versions. They feature high-quality and long-lasting bits.



CONTA-TOOL tool systems

Crimping tools

You need special crimping tools tuned to your particular requirements when attaching wire-end ferrules, cable lugs and plugs (BNC/TNC).
The crimped connection between the crimp contact and the wire must be secure, homogenous and captive.
CONTA-CLIP crimping tools all feature an automatic locking mechanism that ensures consistent processing.

Stamping and cutting tools

Stamping and cutting tools are used during the installation and assembly of switchgear cabinets. They can be used to cut DIN rails to the proper length and to stamp the required fastening holes. The wiring duct cutter can be used to cut wiring ducts of up to 125-mm width to shorter lengths as required.

Materials

High-quality insulated wire-end ferrules which are CSA and CSAus certified comply with the toughest quality requirements. Various colour codes and lengths with cross-sections from 0.25 to 150 mm² are available.
Non-insulated wire-end ferrules, different types and cross-sections of crimping cable lugs and practical accessories (assortment boxes) for easy storage are also included in our product line.

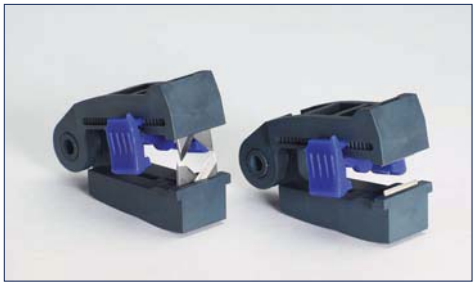
Self-adjusting cutting and stripping tools Stripfix / Stripfix-V / Stripfix-16

The Stripfix tools are self-adjusting cutting and stripping tools for standard types of cable and conductors (stripping can be done 90% of the time without manually adjusting the tool). The insertion of easily swappable stripping cassettes allows you to perform precise stripping of a number of different insulation materials (e.g. PVC, PTFE).

Convenience
Due to the easy-to-swap stripping cassettes, almost all standard types of cable and conductors can be stripped. This enables these tools to provide the greatest capacity for stripping.

Stripping cassettes are easy to swap out

Precision
The ability to make precise adjustments ensures that thin insulation can be removed from wires without damage. After stripping, the stripping blade opens and remains open when the tool is removed to make it easy to discard the stripped coating.



V-shaped blades for stripping problematic insulation

Ergonomic design
Comfortable and friendly for the user – good ergonomics are ensured by the practical design, the soft main grip, the play-free activating grip, the optimized gripping width, the angled head and the light weight.

Cuts up to 10 mm^2/8 AWG

Cost-efficient
Spare stripping cassettes and replacement blades are available.

Reliable
Tested over the course of more than 150,000 stripping processes. Encapsulated in extra strong, modern plastic (twice as strong compared to the nylon/PA6 standard).

Ergonomic construction with non-slip grips on both sides

Crimping tools

Crimping tool set

The crimping tool set has a quick interlock feature and is extremely sturdy and reliable. Just one tool is required instead of many separate tools – thanks to the swappable crimp inserts.

- Basic crimping tools with “easy-change” quick interlock
- All crimp inserts are easy to swap out – without knurled screws and without tools
- Basic crimping tools with automatic locking and unlocking mechanisms to ensure complete crimps
- Crimping pressure can be adjusted
- Dual-component hand grip
- Nickel-plated, matt tool frame
- Many different crimp inserts available for the basic crimping tool
- Available as complete tool set with six crimping inserts

17096.0	1
Description / Features	
Insert for wire-end ferrules without collars. Wire-end ferrules: 0.5-16 mm² Crimp shape acc. to EN 60947-1	

Type 2

Crimping inserts, wire-end ferrules

Type	Qty.
Insert WF 50 EN	
17096.1	1
Description / Features	
Insert for wire-end ferrules without collars. Wire-end ferrules: 25-50 mm² Crimp shape acc. to EN 60947-1	

Type 3

Crimp inserts, cable lugs

Type	Qty.
Insert IT6	
17096.2	1
Description / Features	
Insert for insulated cable lugs, 0.5 - 6 mm²	

Type 4

Crimp inserts, crimp lug

Type	Qty.
Insert NIT 10	
17096.3	1
Description / Features	
Insert for non-insulated crimp lugs, 0.5 - 10.0 mm² DIN 46234	

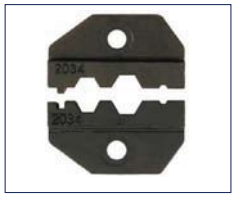
Crimp inserts

Type 5

Crimp insert, spade plug

Type	Qty.
Type	Insert OB 2.5 P
Cat. no.	**17096.4** 1
Description / Features	
Insert for spade plug with opened or pre-rolled crimping claw, from 0.5 – 2.5 mm² (plug width of 6.3+ 4.8 mm)	

Type 6



Crimp insert, coax plug

Type	Qty.
Type	Insert C 59
Cat. no.	**17096.5** 1
Description / Features	
Insert for coax plug BNC/TNC. Coax cable RG 58, RG 59, RG 62, RG 71, hex size: 6.50 / 5.41 / 1.72 mm

DIN rail cutters and stamping tools

DIN rail cutters and stamping tools

The **TS-PSS** DIN rail cutter and stamping tool is designed for manually shortening and stamping holes in DIN rails (TS 15, TS 35, TS 32) and busbars (10 x 3 mm). The tool can be mounted on a workbench or similar working surface. It can also stamp holes of varying dimensions in customized positions.

Features:
- Minimal effort
- Quick, quiet and burr-free cross-cuts
- Holes can be stamped out in any position
- Cutting disk can be re-sharpened or easily replaced

Lengthwise and crosswise hole stamps are included in the delivery.

TS-PSS 2

Rail dimensions

Replacement stamp + die, Ø 6.0 mm, round hole	SMSST/R 6 mm
Cat. no.	**3898.3** 1

TS-PS eco

The new **TS-PS eco** DIN rail cutter is a manual tool designed for cutting DIN TS 35 rails into shorter sections. The TS-PS eco has a quiet and quick cutting process which leaves no burrs on the rail. The result is a fine, straight cut that does not result in any bending of the rail. The tool can be attached to a work bench or mounted at a workstation.

Features:
- Minimal effort
- Quick, quiet and burr-free cross-cuts
- Maintenance-free
- Versatile: metric and inch scale adjustments
- Cutting plate can be re-sharpened or easily replaced

DIN rails are listed starting on page 268.	

Wiring duct cutter

Wiring duct cutter

The **VKS** wiring duct cutter is a tool for manually cutting wiring ducts of up to 125 mm in width. The tool can be attached to a work bench or mounted at a workstation.

Features:
- 90° precise-angle cutting
- Quick, quiet and burr-free cutting
- Minimal force needed for cut
- Maintenance-free

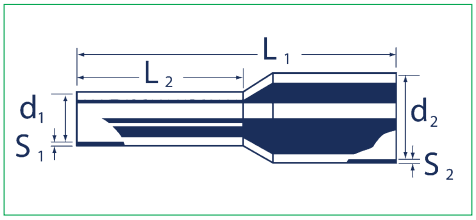
If the individual strands at the ends of finely stranded wires need to be protected due to frequent connecting, then **CONTA-CLIP** wire end ferrules are an ideal solution. The ferrules must be crimped gas-tight with the ends of the wires. A simply distortion caused by the clamping force is not adequate. The wire-end ferrules can be crimped easily and securely with **CONTA-CLIP** crimping pliers. The resulting connections function properly both electrically and mechanically.



Funnel feed-in made of polypropylene. Heat resistant up to 120°C. For wires from 0.5 – 150 mm². Material: E-Cu/A-Cu, galvanically tin-plated.

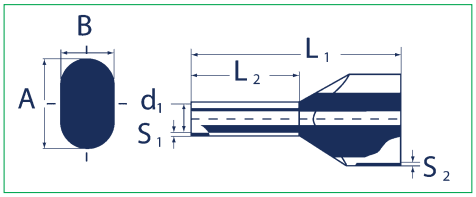
The special shape of the plastic collar makes it easy to feed in two wires in one wire-end ferrule.



Funnel feed-in made of polypropylene. Heat resistant up to 120°C. For wires from 0.5 – 150 mm². Material: E-Cu/A-Cu, galvanically tin-plated.

CONTA-BOX housing systems

CONTA-CLIP offers a wide range of housings of different sizes and materials for the protection of electronic circuitry, devices or terminals. The type of material to use is chosen based on the requirements of the application.

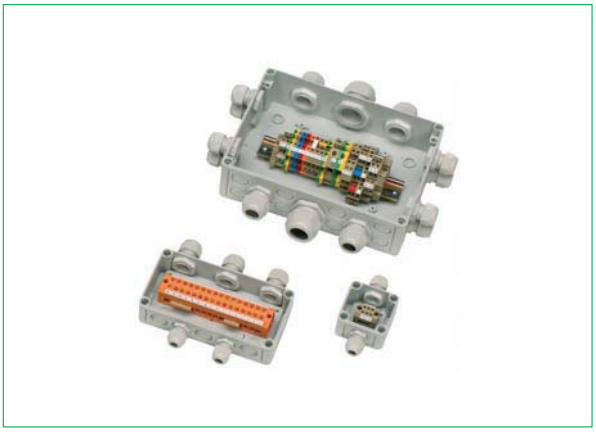
Five product lines are available:

Polystyrene

Material:	Polystyrene
Protection:	IP 66
Toxicity characteristics:	halogen-free/cadmium-free
Thermal stability:	-25° to +40°C
Flammability:	UL 94-V2
Chemical resistance:	good
Sea water resistance:	good
UV resistance:	satisfactory

Polycarbonate

Material:	Polycarbonate
Protection:	IP 66
Toxicity characteristics:	halogen-free/cadmium-free
Thermal stability:	-35°C to +80°C
Flammability:	UL 94-V2
Chemical resistance:	good
Sea water resistance:	very good
UV resistance:	good



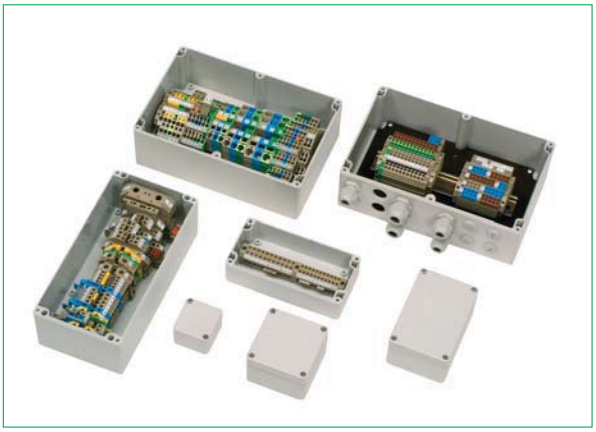
Polyester

Material:	Polyester
Protection:	IP 66
Toxicity characteristics:	halogen-free/cadmium-free
Thermal stability:	-40° to +90°C
Flammability:	UL 94-V0
Chemical resistance:	good
Sea water resistance:	very good
UV resistance:	good

Polystyrene / Polycarbonate / Polyester / ABS / Aluminium

ABS

Material:	ABS
Protection:	IP 66
Toxicity characteristics:	halogen-free/cadmium-free
Thermal stability:	-40° to +80°C
Flammability:	UL 94-HB
Chemical resistance:	good
Sea water resistance:	good
UV resistance:	satisfactory



Aluminium

Material:	Aluminium (ALSI, DIN 1725)
Protection:	IP 66
Toxicity characteristics:	halogen-free/cadmium-free
Thermal stability:	-40° to +90°C
Flammability:	
Chemical resistance:	good
Sea water resistance:	good
UV resistance:	very good

Upon request, the housings are manufactured according to customer specifications and supplemented with products from **CONTA-CONNECT** or **CONTA-CON** product lines, which are then installed on mounting plates or DIN rails.

During the manufacture of the housings, we can carry out cuttings (milling), feed-through bore holes, thread connection bore holes or painting. Cable glands or external joints can also be attached when needed.

Our consistent high level of quality is ensured by our selection of the finest materials and our continuous quality management control system.

Polystyrene housing CK

Polystyrene housing

Material: polystyrene
Protection: IP 66
Impact resistant
A comprehensive line of accessories
Options:
Metric knock-outs
Transparent polycarbonate cover

Technical data

Material	Polystyrene
Protection	IP66
Toxicity characteristics	halogen-free and cadmium-free
Flamm. class acc. to UL 94	V2
Thermal stability	-25°C to +40°C
Chemical resistance	good
Sea water resistance	good
UV resistance	satisfactory
Colour	grey, similar to RAL 7035
Impact resistance	IK07 DIN EN 5012

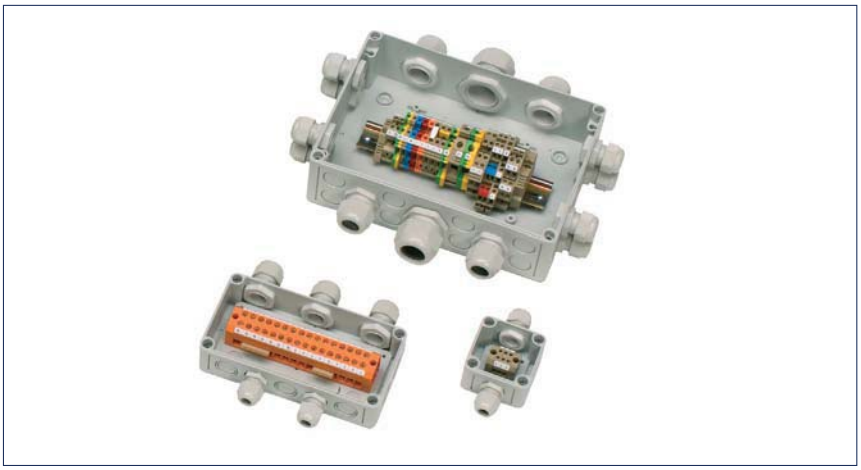
Polycarbonate housing CK-PC

Polycarbonate housing

Material: Glass-fibre reinforced polycarbonate
Protection: IP 66
Impact resistant
A comprehensive line of accessories
Metric knock-outs



Technical data

Material	Polycarbonate
Protection	IP66
Toxicity characteristics	halogen-free and cadmium-free
Flamm. class acc. to UL 94	V2
Thermal stability	-35°C to +80°C
Chemical resistance	good
Sea water resistance	very good
UV resistance	good
Colour	grey, similar to RAL 7035
Impact resistance	IK08 DIN EN 5012

HOUSING SYSTEMS

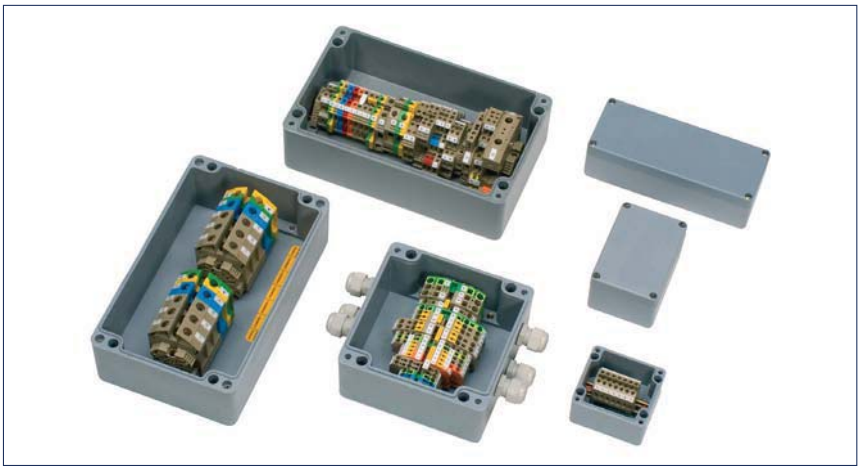
Polyester housing CP

Polyester housing

Material: Glass-fibre reinforced duro-plastic polyester
Protection: IP 66
Heavy-duty plastic
A comprehensive line of accessories



Technical data

Material	Polyester
Protection	IP66
Toxicity characteristics	Halogen-free
Flamm. class acc. to UL 94	V0
Thermal stability	-40°C to +90°C
Chemical resistance	good
Sea water resistance	very good
UV resistance	good
Colour	grey, similar to RAL 7000
Impact resistance	> 7 Joule, EN50014

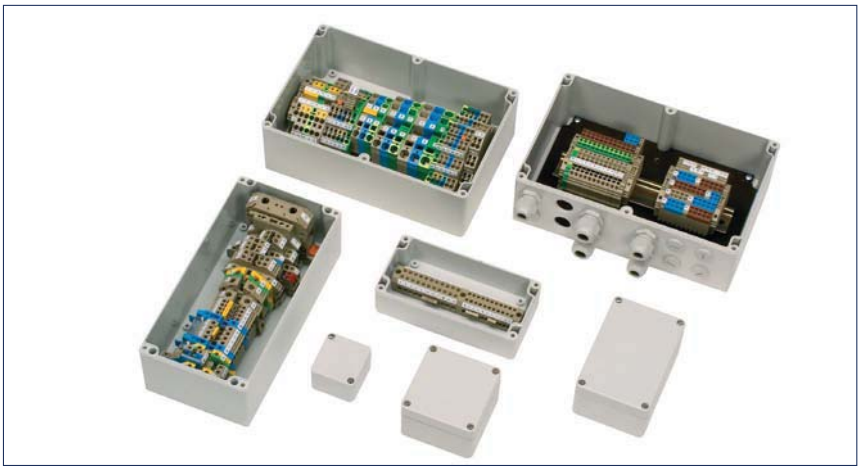
Polycarbonate housing CM | ABS housing CT

Polycarbonate housing / ABS housing

Material: glass-fibre reinforced polycarbonate and ABS
Protection: IP 66
Impact resistant
Halogen-free and cadmium-free
A comprehensive line of accessories



Technical data	
Material	Polycarbonate
Protection	IP66
Toxicity characteristics	halogen-free and cadmium-free
Flamm. class acc. to UL 94	V2
Thermal stability	-40°C to +100°C
Chemical resistance	good
Sea water resistance	very good
UV resistance	good
Colour	grey, similar to RAL 7035
Impact resistance	> 7 Joule, EN50014

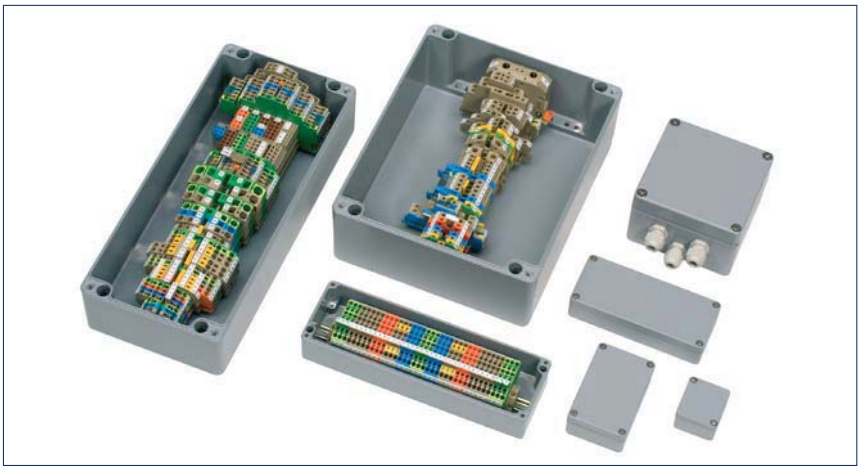
Aluminium housing, CA

Aluminium housing

Material: Aluminium
Protection: IP 66
Impact resistant
halogen-free and cadmium-free
A comprehensive line of accessories



Technical data

Material	DIN EN 1706 EN AC-AlSi 12 (Fe)
Protection	IP66
Toxicity characteristics	halogen-free and cadmium-free
Flamm. class acc. to UL 94	-
Thermal stability	-40°C to +90°C
Chemical resistance	good
Sea water resistance	good
UV resistance	very good
Colour	silver grey RAL 7001
Impact resistance	> 7 Joule, EN50014

Notes

CONTA-CLIP Service

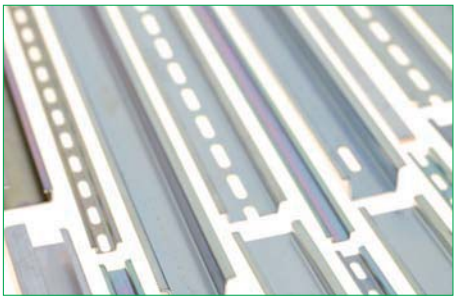
CONTA-CLIP the Service Provider

CONTA-CLIP is able to meet the requirements and challenges of our customers by offering a range of custom solutions, including housing preparation, DIN rail terminal assembly, cable and terminal marking and final assembly.

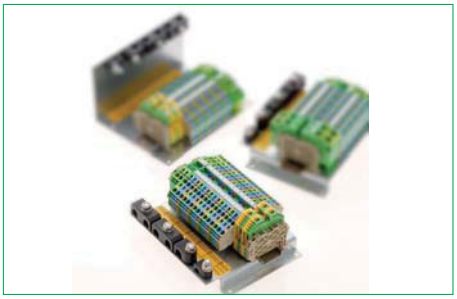
CONTA-CLIP can prepare DIN rails and housings according to your specifications and fit these with cable glands or customer-specific products as needed. We can also preassemble terminals on the DIN rail with marking and labelling according to your requirements. And we can assume responsibility for parts storage. Thus you only need one part number to specify a complex pre-assembled unit! We can then take responsibility for the storage of individual components and for the component list.

For years our customers and sales representatives around the world have taken advantage of this service. We would be glad to prepare an offer for your individual solution.

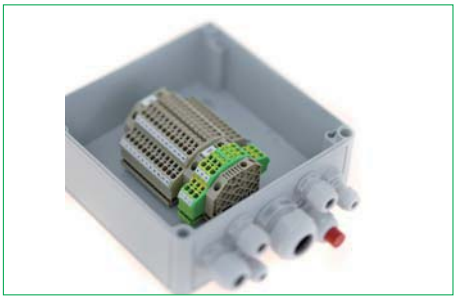
DIN rails can be cut to length, drilled with holes or fitted with press-in bolts according to the diagrams and specifications of the customer. **CONTA-CLIP** offers a solution for practically any application based on our ability to deliver a wide variety of profile sections and materials.



CONTA-CLIP can pre-assemble terminals with labelling and populated with customer components or connected with wire and cable harnesses – all according to customer requirements, CAD files, diagrams and prototypes.



Housings can be processed to fit the needs of our customers (with break-throughs and drilled holes). They can also be populated with terminal strip assemblies, cable glands and cable sets. Our large line of housings are available in many sizes and materials. They can be used as the ideal solution in a wide variety of applications.



CONTA-CLIP also offers a customized printing service to supplement our range of standard labelling products. Customized printing can involve a considerable amount of manual work. **CONTA-CLIP** would be pleased to take on this printing work – our high-quality printing services will help to reduce your workload. **CONTA-CLIP** can consolidate your specifications in a data list for a one-time or repeated project, which is then assigned a project number so that it can be ordered on short notice.

CONTA-CLIP is always at your service to fulfil your custom marking needs! You can e-mail us your requirements (as a file attachment) to customizedmarkers@conta-clip.de.

CONTA-CONNECT Technical Appendix

Materials

All products from **CONTA-CLIP** are manufactured from standardized raw materials which are already well established in the electro-technical industry. All of our materials are subject to strict quality control testing.

Insulation materials

The insulation housings of **CONTA-CONNECT** products are made from high-quality PA 6.6 polyamides. Such materials have a flammability classification of UL 94-V2 or UL 94-V0. This modern insulation predominates in terminal products and has been approved by all of the relevant regulatory bodies, including CSA, UL, PTB, SEV, VDE, DEMKO and NEMKO. It has a creepage-current resistance level of CTI 600, in accordance with IEC 112/DIN 0303/part 1.

It also has excellent resistance to micro-organisms, bacteria and termites. Polyamide is also resistant to ultra-violet light and ageing.

Polyamide 6.6 absorbs moisture from its surroundings (about 2.8% on average). This helps the plastic to stay elastic and non-brittle, even at temperatures down to -40°C. It has a semi-crystalline molecular structure and is stabilized by thermal ageing. This ensures that it maintains its excellent electrical, mechanical and chemical specifications even at temperatures up to 120°C. The peak temperature allowed for short-term use is about 180°C. The melting point of the material is at 250°C.

Polyamide 6.6 is flame resistant and self-extinguishing in compliance with VDE and ASTM.

None of the insulating materials and colouring pigments used by **CONTA-CLIP** contain asbestos, phosphor, cadmium or halogens.

Refer to the table below for additional electrical and technical specifications.

Features

Polyamide (PA)

- Flexible, resistant to breakage
- Excellent electrical and mechanical characteristics
- High temperature allowed for long-term use
- Good resistance to fire
- Halogen-free and phosphor-free flame-retardant material
- No dioxin or furan formation

Glass-fibre reinforced polyamide (PA GF)

- Excellent dimensional stability
- Excellent electrical and mechanical characteristics
- Higher long-term-use temperature
- Good resistance to fire
- Halogen-free and phosphor-free flame-retardant material
- No dioxin or furan formation

Characteristics (at +20°C)	Unit / level	Thermoplastic polyamide 6.6/ UL 94/V2	Thermoplastic polyamide 6.6/ UL 94/V0	Thermoplastic polyamide 6.6/ UL 94/V0/GF	Thermoplastic PBT

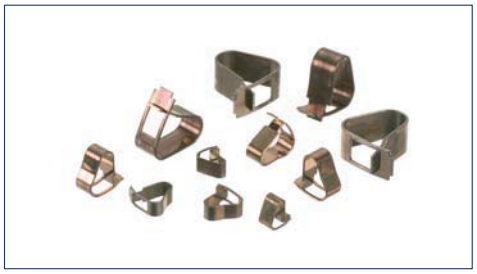
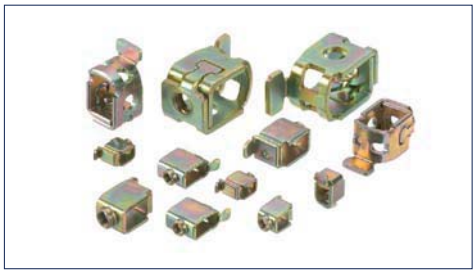
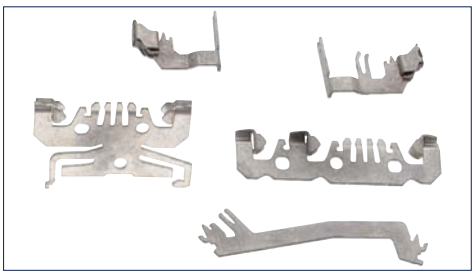
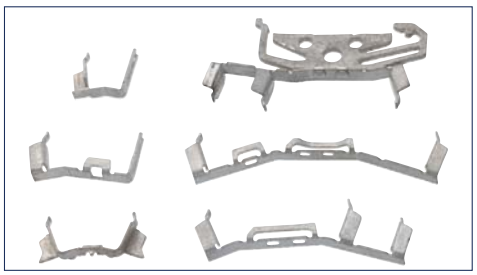
Metals

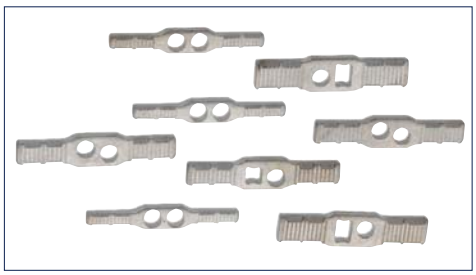
All metal parts used in **CONTA-CLIP** products are selected using state-of-the-art technology. During the production process, they are closely monitored by the **CONTA-CLIP** quality management system. The metal parts in **CONTA-CLIP** products are galvanized using the most modern techniques available. They feature state-of-the-art surface protection. The steel parts are galvanized as standard practice. An additional passivation with a blue chromate layer is then applied to the zinc coating. Copper and brass parts are normally coated with a tin layer. This tin coating provides consistent, good electrical characteristics and also an excellent protection against corrosion. Solder lugs and solder pins are also coated with a tin layer. An additional layer of nickel is present under the tin layer in order to ensure that the soldering characteristics do not deteriorate over longer periods. The springs in the tension-spring and pressure-spring mechanisms are made from high-quality, rust-proof, acid-resistant steel. This provides them with excellent resistance to their environmental surroundings.

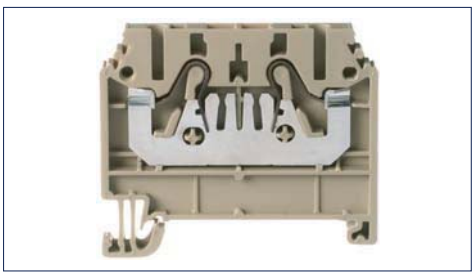


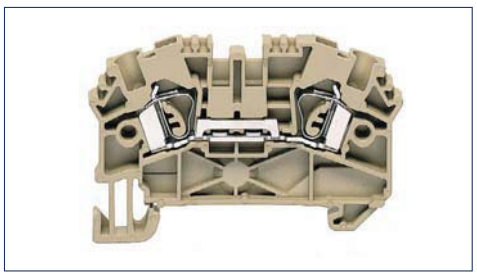






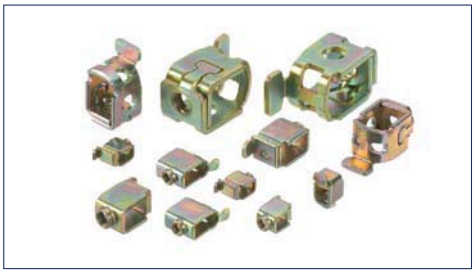




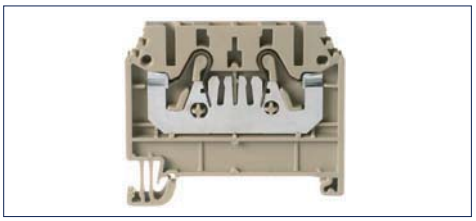


CONTA-CONNECT Technical Appendix

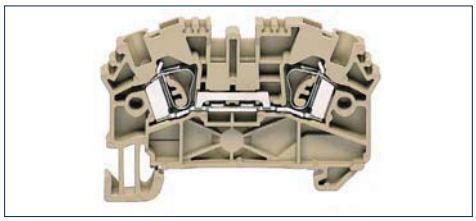
Screw connection

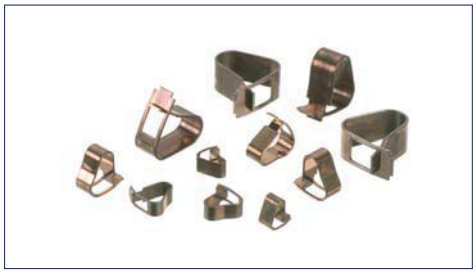


Pressure-spring connection



Tension-spring connection





The clamping yoke design

The clamping yoke transmits pressure from the screw to clamp the conductor against the busbar. The required contact force is generated by the torque applied to the screw. This system provides a gas-tight connection between the conductor and the internal busbar. This creates increasing thread friction and results automatically in a stronger mechanical grip on the conductor. The increased torque is generated by an elastic distortion of the terminal body. Because of its construction, the clamping yoke is able to provide the strongest contact force and thus the lowest voltage drop. The clamping yoke and the connecting screw are make from carbonized steel that is galvanized and chrome-plated.

The Pressure-spring design

The pressure-spring design from **CONTA-CLIP** makes wiring convenient and ensures the maximum level of contact security! This connection mechanism unites the advantages of the **CONTA-CLIP** tension-clamp connection system with the possibility to connect individual wire using no tools! Solid and stranded wires with wire-end ferrules can simply be inserted directly into the terminal point.

The contact between the wire and the busbar is automatically established during this insertion. A standard screwdriver can be used to open the clamp for release or for the insertion of stranded wire without ferrules.

The tension-spring design

The tension spring functions in a manner similar to the clamping yoke. It also separates the mechanical and electrical functions. The tension spring consists of high-quality, rust-proof, acid-resistant steel. This spring presses the wire against the busbar. The tension spring is a connection element which can be used quickly and for many purposes, and which distinguishes itself by being maintenance-free and shock-proof. High resistance to vibration is guaranteed by the unique design of the tension spring.

Securing the terminal screws

All metal parts, including the terminal screws made from hardened steel, are held captive in the insulation housing. An added level of security is provided because the screw head is held back within the insulation housing. When turning the screw counter-clockwise, the screw reaches an “idle” position without an end stop, so that it is not possible to overturn and deform the insulation housing. This is particularly important if you are using power screwdrivers or compressed-air screwdrivers. When you subsequently turn the screw clockwise, the entire thread of the clamping yoke engages before any clamping pressure is exerted.

Torque exerted by the terminal screws

IEC 60947-7-1 (DIN VDE 0611 part 1) “Low-voltage switching devices, part 7: auxiliary devices, main section 1 – terminal blocks for copper wires”, specifies mechanical and electrical testing procedures for analyzing connection mechanisms.
This directive specifies that copper wires should be connected with a specific amount of torque exerted by the terminal screws. The value of the torque depends on the size of the terminal screw, as specified in the following tables.

Products with slotted-head screws

Thread	Torque range Steel screws	
	Min. 8.8	A 2/A 4-8
M	Nm	Nm
M 2,5	0.4...0.8	0.4...0.8
M 3	0.5...1.0	0.5...1.0
M 3,5	0.8...1.6	0.8...1.6

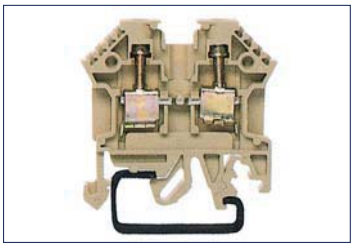
M 8	6.0...12
M 10	10.0...20
M 12	14...31
M 14	25.0...60

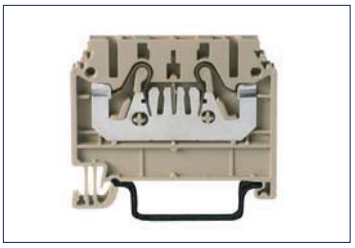
Combi-foot /
Screw connection system
CONTA-CLIP terminal blocks with screw-connection systems are normally equipped with a combi-foot. This ensures that the terminal blocks can easily be snapped on to the TS35 x 7.5, TS35 x 15 rails (according to DIN EN 50 022) and the TS32 (according to DIN EN 50 035). When using a C-rail (TS32) and the device/top-hat rail (TS35), you can significantly reduce the number of required terminal block types in your inventory. The provides you with a cost-effective and efficient solution!

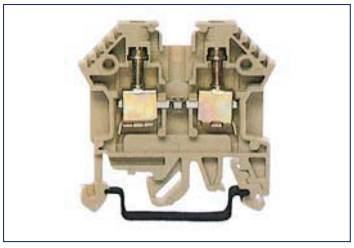
TS35 foot /
Screw connection system
For the standard terminal block with cross-sections of 2.5 mm^2 to 35 mm^2, an additional series is available that provides an alternative mechanical snap-on (foot design) compared to the combi-foot terminal blocks. The mechanical and electrical characteristics of both product series are the same!

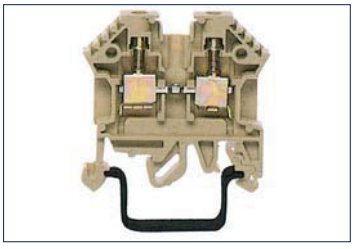
TS35 foot /
Screw connection system
The terminals block with tension-spring connections normally come with a TS35 foot. This foot is easy and safe to snap on to the rail. Because of the mechanical construction, it is also possible to attach to wiring systems.

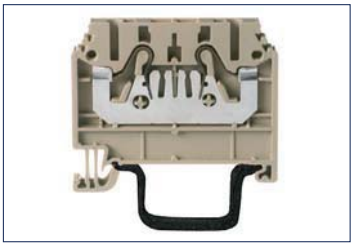
TS35 foot /
Pressure-spring connection system
The terminals block with tension-spring connections normally come with a TS35 foot. This foot is easy and safe to snap on to the rail. Because of the mechanical construction, it is also possible to attach to wiring systems.





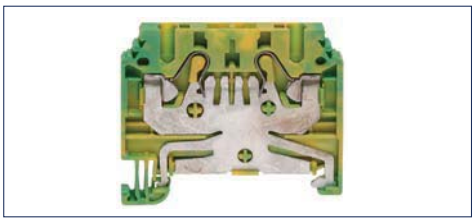






CONTA-CONNECT Technical Appendix

Protective-earth terminal blocks

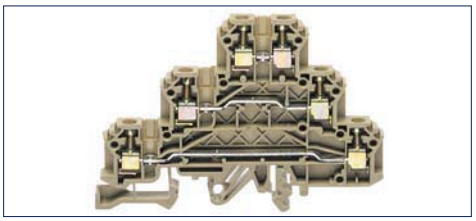


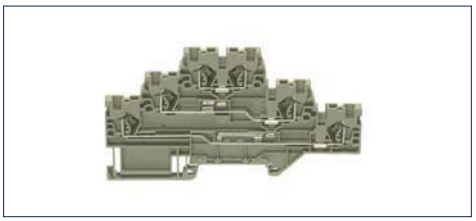
A protective-earth (PE) terminal block is a device with one or more clamping points used to connect round conductors (PE/PEN wires). The PE terminal contacts the metal DIN rail via the PE foot using either a screw attachment or by simply snapping on the terminal block to the rail (using an internal-spring PE foot).

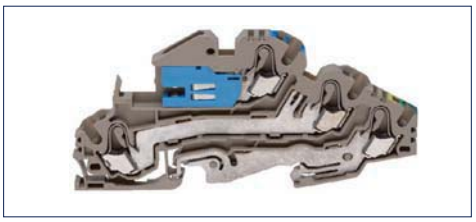
Application areas (EN 60 947-7-2)
This is valid for PE terminal blocks in rated cross-sections up to 120 mm² (for PE functionality) and from 10 mm² (for PEN functionality).
The terminal blocks come equipped with a screw connection or a screw-free connection mechanism for attaching solid, stranded or finely stranded copper wires. They can be used with circuits up to 1000 VAC (60 Hz) and up to 1500 VDC, predominantly in conjunction with feed-through terminals. The PE terminal is used to establish the mechanical and electrical connection between the PE wire and the metal DIN rail. When using the PEN functionality of the PE terminal blocks, you may only use a copper rail (according to EN 60 947-7-2). When using the PE functionality of the PE terminal blocks with cross-sections of 16mm² or larger, you must use a TS 35x15 rail in order to maintain the current-carrying capacity.

Nominal current with PEN (rated current)
The thermal rated current is the load current that can be continually carried by the PE terminal block with PEN functionality. The term “rated current” is used to refer to nominal current in order to comply with the new VDE 0611 part 1/8.92.

Multi-level terminal blocks



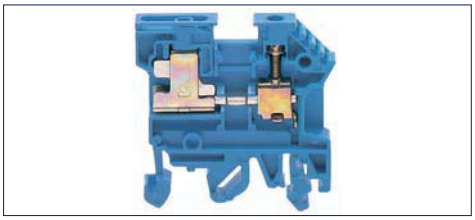




A multi-level terminal block is a device that features at least two busbar levels. Four or more terminal points are available to connect round conductors. A variety of combination options are possible: L/PE, L/L, L/N, N/N, N/PE or L/N/PE, L/L/N, N/N/PE, etc.

Application areas
(EN 60 947-7-1, EN 50 847-7-2)
This is valid for multi-level terminal blocks with screw or screwless connections for attaching single, stranded or finely stranded copper wires. There are options for connecting external, neutral and PE wires to a mounting plate (DIN rail). The separate levels are insulated from each other. They can also normally be cross-connected individually or across levels.

Neutral feed-in disconnect terminal



A neutral disconnect terminal is a device for connecting round wires that has one or more clamping points and a mechanism for separating the neutral connection. Neutral disconnect terminals are also available as multi-level terminal blocks.

Application areas (EN 60 947-7-1)
VDE 0611 part 5/draft 5.84
This is valid for neutral disconnect terminals with screw or screwless connections for attaching a neutral potential which can be disconnected with single, stranded or finely stranded copper wires. N-busbars (10x3 or 6x6) can be contacted by means of the disconnect element. The ability to disconnect allows you to take an insulation measurement without disconnecting the neutral wire.

Rated-disconnect terminal blocks

Rated-disconnect terminal blocks
A rated-disconnect terminal block is a device which provides screw or screwless connections to connect solid, stranded or finely stranded copper wires. It allows for a no-load separation. The rated voltage should be equal to the rated insulation voltage that is referenced by the insulation test and the creepage distances (according to EN 60 664-1). The construction of the opened isolating element is designed according to the requirements for the rated surge voltage.

Fused terminal blocks

Fused terminal blocks
A fused terminal block is a device used to hold fuses that are separated from the clamping points by means of a fuse-disconnect plug, a fuse-disconnect lever or a screw cap.

Application areas
(EN 60 947-7-3/EN 60 127-2)
This is valid for fuse-holder terminals which have screw or screwless connections for attaching single, stranded or finely stranded copper wire and a connection to the fine fuses which can be disconnected. It is simple to replace fuses by using the disconnect element. The fuse-holder terminals are rated for the corresponding max. power loss of the G-fuse inserts in compliance with EN 60 127-2.

CONTA-CONNECT Technical Appendix

Touch protection

The accident prevention regulations issued by the German Association of Fine Mechanics and Electronics (VGB 4) is relevant for the operators of electrical facilities. It specifies special safety regulations in order to reduce the risk of electrical accidents.

This regulation defines the safety clearances for operating and intermittent handling in the proximity of parts which are dangerous to touch ("active components" of low-voltage facilities up to 1000 or 1500 V).

Active (i.e., dangerous to touch) components may only be worked on after it has been established that there is no voltage on them. Working in the proximity of active components is only permitted when these components are voltage-free or when they are protected against direct touch (§ 6).

When working near active components, the following safety measures apply:

- Establish that the components will have no voltage applied to them for the duration of the work, or
- Provide touch protection by covering, or shielding during your work, or
- Ensure that the permitted clearance distance is strictly observed (§ 7).

The phrase "occasional handing" is used in reference to the handling of mechanisms such as push-buttons, toggles or dials that are in the proximity of components which are dangerous to touch.

According to DIN 57 105 – part 1/VDE 0105 – part 1, this refers to "operating with partial protection against direct touch".

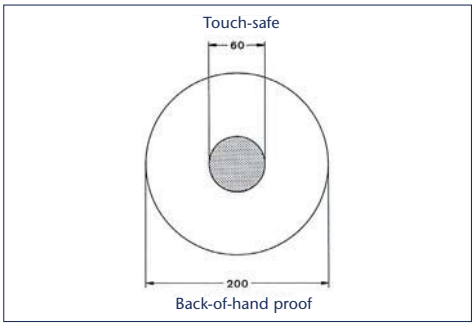
Detailed information concerning "occasional handling" can be found in the VDE regulation 0100/part 750. One of the factors defined here is the extent to which active components located in the proximity of operational elements must be covered to protect them from accidental touch. The definition of a "protective space for occasional handling" is based on the area that must be reached into when handling the unit.

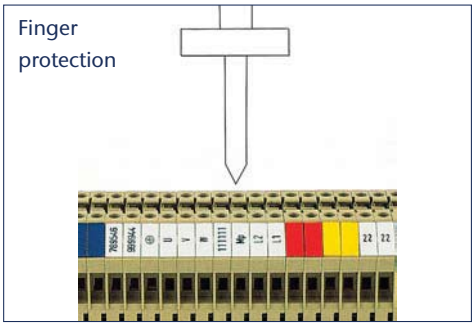
The key fact is that all active components in a circumference of 30 mm from the operational element must have touch-safe protection. Thus the parts of the electrical device that are dangerous to touch must not be accessible by the straight finger used in VDE tests (according to DIN 57 470 - part 1/VDE 0470 - part 1, IEC test finger).

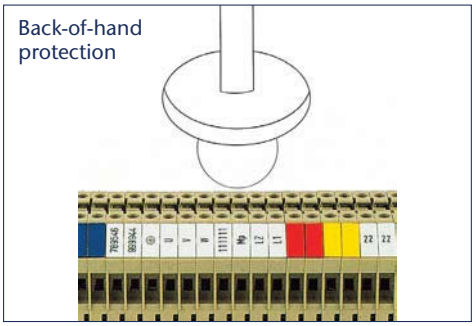
Back-of-hand protection is required for the "extended range" up to 100 mm from the operational element.

Back-of-hand protection is present when a force of 50 N can be exerted on a ball of 50-mm diameter without touching any of the dangerous parts of the components. No special touch protection measures are required beyond this range.

Facilities and machinery that are run with protective low voltages up to 25 or 60 V are considered to be protected from "direct touch".







Working on electrical connection mechanisms with non-insulated screwdrivers

Non-insulated screwdrivers may only be used in electrical facilities after they have been switched off.

The following five safety rules must be followed in order to ensure that no voltage is present before starting work and that no voltage is switched on during the duration of the work:

- **Switch off facility**
- **Ensure it is not possible to switch back on**
- **Establish that no voltage is present**
- **Ground and short-circuit**
- **Cover or shield any neighbouring parts that are under live voltage**

These are the five safety rules for working on electrical facilities and equipment. The measures to be taken in regards to the local operational conditions (for example, any local high-voltage and low-voltage overhead lines, cabling or switching facilities) are specified in DIN VDE 0105 part 1.

Unused, live-voltage terminal points

Those unused terminal points which may have voltage on them must be protected against accidental touch by means of suitable covers. The terminal screws of unused, non-live terminal points should also be tightened.

Protection category according to EN 60529/DIN 0470

First digit			Second digit – water protection								
			IP.0	IP.1	IP.2	IP.3	IP.4	IP.5	IP.6	IP.7	IP.8
			No protection	Protection against water dripping vertically	Protection against dripping fluid with up to 15% tilt from vertical axis	Protection against splashed water with up to 60% tilt from vertical axis	Protection against splashed water from all directions	Protection against splashed water from all directions	Protection against temporary flooding (on deck of ship)	Protection against submersion in water	Protection against water under pressure
	Touch protection	Protection against foreign objects									
IP 0.	No touch protection	Protection against large, solid foreign objects	IP 00								
IP 1	Protection against large-surface touching (with the hand)	No protection against large, solid foreign objects	IP 10	IP 11	IP 12						
IP 2	Protection against finger touching	Protection against mid-sized, solid foreign objects	IP 20	IP 21	IP 22	IP 23

CONTA-CONNECT Technical Appendix

Connection cross-section

The rated cross-section of the terminal blocks must be specified by the manufacturers according to EN 60947-7-1.

Normally it specifies the maximum cross-section of the wire that may be connected to the terminal. This is the value used for the electrical, mechanical and thermal tests specified in the standard. The manufacturer must also specify the rated connection capacity, the number of wires that can be connected together, and any processing of the wire ends that is required before connecting (whereby the wires can be either solid, stranded or finely stranded.

CONTA-CLIP terminal blocks are designed so that copper wires can be simply connected without any special treatment. It is not necessary to use wire-end ferrules with **CONTA-CLIP** terminal blocks. If wire-end ferrules are used at the end of stranded wires to protect them from splicing off, this will reduce the connection capacity for the stranded wires to the next lowest level.

Layout and dimensions of connecting cables Excerpt from DIN VDE 0295.

Rated cross-section	Solid Diameter		Stranded Diameter		finely-stranded Diameter	Wire count	American Wire Gauge (AWG) acc. to EN 60 204 part 1 Gauge No.

Connecting aluminium wires

Right after the stripping process, a thin, non-conductive oxide layer forms on the surface of aluminium wires. This layer must be removed in order to establish a conductive, gas-tight connection.

CONTA-CLIP terminal blocks allow you to connect aluminium wires to one or both sides. We recommend preparing the wires in the following way in order to ensure the proper contact.

- Use a scraper to rid the wire end of the oxidized layer. Then immediately submerge it in Vaseline (a neutral, acid-free and alkaline-free substance) and quickly connect to the terminal block.
- Tighten the connection after a few days in order to ensure that it is still secure.
- Repeat this preparation process when you need to connect a new wire.

Current capacity

The relevant European standard EN 60947-7-1 specifies the testing currents for the individual wire cross-sections listed in the table. The type testing is based on these current strengths. When tested under this load, the terminal must comply with the limit values defined by the standard (for example, the maximum temperature rise). The values for the current capacity of other terminal types can also be found in both of these standards. The actual current capacity of a circuit – and thus the terminal as well – is not established by these standards but by the relevant national contractor regulations. These regulations take into account the particular types of routing for the cables and wires.

Test current acc. to EN 60 947-7-1, Table V

VDE 0110 b § 8 – Table 4 – Minimum creepage and clearance distances, mm

The specifications of DIN VDE 0110-1 (“Insulation coordination for electrical devices in low-voltage facilities”) are used to measure the clearance and creepage distances. DIN VDE 0110-1 is derived from a modified version of IEC 60664-1. The following correlations apply for the assessment of the creepage and clearance distances.

Clearance distances

- Overvoltage expected (Rated surge voltage)
- Overvoltage protection in use
- Contamination degree

Creepage distances

- Rated voltage
- Insulation group
- Contamination degree

Reference voltage AC voltage (effective value) (V)	DC voltage (V)	Insulation group A0		Insulation group A		Insulation group B			Insulation group C			Insulation group D		
		Clearance	Creepage	Clearance	Creepage	Clearance	Creepage		Clearance	Creepage		Clearance	Creepage

1000	1000	4000	6000	8000	12000

1) The nominal mains voltage of 500 V is implied.

Establishing the overvoltage categories

Overvoltage category I
Devices intended for connecting to a static electrical building installation.
Measures have been taken outside of the device (either in the fixed installation of between the fixed installation and the device) to limit transient overvoltages to the corresponding value.

Overvoltage category II
Devices intended for connecting to a static electrical building installation (for example, household appliances or portable tools).

Overvoltage category III
Devices which are part of the fixed installation and other devices where a high degree of availability is expected (for example, distributor panels, power switches, distribution systems (including cable, busbars, distribution boxes, switches and socket outlets) in the fixed installation, devices for industrial use, and other devices with permanent connections to the fixed installation (such as stationary motors).

Overvoltage category VI
Devices for use at or near the feed into the electrical installation of buildings, and that from the main distribution in the direction of the mains system (for example, electricity meters, surge current circuit breakers and ripple-control units).

Min. clearance distances Take from Table 2a (DIN VDE 0110/01.89)

Min. clearance distances, in mm, up to 2000 m over sea level

100	170	170	170	170	45	45	45	45

1) Proof from surge-voltage test is required when the clearance distance is smaller than the value specified for Case A.

2) Preferred values from Table 1.

3) Point against plate.

4) These values are valid, in contrast to IEC Report 664, for printed circuits. A corresponding German modification proposal is pending before the IEC.

Height correction factors.

Height in m	Normal air pressure, in kPa	Multiplication factor for clearances
2000	80.0	1.00
3000	70.0	1.14
4000	62.0	1.29
5000	54.0	1.48
6000	47.0	1.70
7000	41.0	1.95
8000	35.5	2.25
9000	30.5	2.62
10000	26.5	3.02
15000	12.0	6.67
20000	5.5	14.5

Contamination degrees

Contamination degree 1
Only dry, non-conductive contamination can occur. Contamination does not have any influence.

Contamination degree 2
Only non-conductive contamination can occur. Occasionally, temporary conductivity may occur due to condensation.

Contamination degree 3
Conductive contamination can occur. Dry, non-conductive contamination can occur which can become conductive due to condensation.

Contamination degree 4
Contamination leads to constant conductivity (for example, from conductive dust, rain or snow).

The creepage and clearance distances and the resulting rated specifications for electro-mechanical products (terminal blocks, terminal strips, PCB connection terminals and plug-in connectors) are based on contamination degree 3 and overvoltage category III (unless otherwise specified) allowing for all types of mains systems.

Assessing the creepage distances

Notes

CONTA-CONNECT Approvals

The CE label

The CE label originates from a resolution of the EC Council on May 7, 1986 (the new version concerning technical harmonization and standardization surrounding the elimination of technical trading hindrances within the EC). The implementation is carried out by the harmonization directives (EC guidelines). Although the application of the harmonized European norms is voluntary, conformity with the basic legal requirements for the protection of the health and safety of the consumer and environment can be assumed when manufacturing is conducted according to these standards.

The attachment of the CE label by the manufacturer, therefore, is proof that the protective requirements of the applicable EC guidelines were observed and that the required conformity valuation process was carried out. The fulfilment of these protective requirements is a legal requirement in order to sell a product in the EU.

The CE label is not meant for the purchaser or consumer; it is an administrative symbol and informs the supervisory authorities of the proof of conformity.

The following EC guidelines are relevant today for **CONTA-CLIP** products:

- **Electromagnetic Compatibility (2004/108/EC)**
  for devices which can cause electromagnetic interference or are affected by interference.
- **Low Voltage Directive (2006/95/EC)**
  for use with electrical equipment with a rated voltage between 50 and 1000 V (for AC current) and between 75 and 1500 V (for DC current).
- **Machine Safety (2006/42/EC)**

The entire construction and production at **CONTA-CLIP** has long been subject to these relevant standards and directives. Standard-compliant testing of our products is carried out in direct cooperation with the responsible, accredited laboratory of the TÜV Rheinland (Technical Inspection Agency of Rhineland – the inspection agency for device safety). Modern, computer-aided measurement and examination facilities help to ensure the fast, affordable and efficient processing of examinations and certifications

Information about the CE label

CE labelling of the products or their packaging units is carried out according to the basic requirements found in all EC guidelines which apply to the products within the transitional periods established in the individual guidelines.

Cable connectors

The CE labelling is carried out by the manufacturer within the scope of a manufacturer's declaration, in compliance with EC guidelines. This confirms conformity with the directive and is targeted for the authorities.

Cable connectors comply with the basic safety regulations given in the low voltage directive. The CE label is mandatory. It must be attached to the packaging because it confirms conformity with directives and ensures the free trade of goods in Europe.

In order to ensure that our products remain at the cutting edge of technology, we have worked closely and successfully with experts at **TÜV Rheinland Product Safety GmbH** and the **KEMA** inspection agency.

This excellent cooperation helps us to be completely sure of the electrical safety of our products.

Experts at an impartial inspection agency help us to satisfy all of the latest regulations and to meet our customers' current challenges.

Our innovative terminal blocks, for example, have been examined and certified to the highest possible extent by the **TÜV Rheinland Product Safety GmbH** and the **KEMA** Testing Authority for their conformity to international (IEC) and European norms (EN). These tests are documented in the existing inspection reports.
